Mixxx User Manual

Release 2.4.0

The Mixxx Development Team

Mar 25, 2024

CONTENTS

ONE

INTRODUCTION TO MIXXX

Mixxx enables you to perform live DJ mixes with your digital music collection. It helps you rock the party with DJ controllers, vinyl turntables, or even just your keyboard. It is developed by an international team of volunteers who want to bring the joy of DJing to everyone. The project is non-profit, open-source and community driven. Together, we aim to build the best DJ software ever created. We hope you will *join us*!

1.1 How Mixxx Works

Mixxx is different from typical music player applications because it plays multiple audio files at the same time and has many features to manipulate the playback of the audio files. This lets you creatively mix different tracks together on the fly.

You can use Mixxx to preview the next track in headphones before the audience hears it, also known as headphone cueing. This helps you choose a track that is appropriate for the present moment and that will mix well into the currently playing track(s). To use headphone cueing, you need at least 2 separate audio outputs, typically provided by a USB audio interface (also known as a "sound card", although most of them are not shaped like cards anymore).

The *shortcut* for headphone cueing in Deck1 is T while for Deck 2 the shortcut is Y.

Mixxx can be used in two different ways for headphone cueing:

Internal Mixing

> Mixxx plays multiple audio files on the computer at the same time, mixes them together, and sends the mixed signal to one audio interface output. A separate signal is sent to another audio interface output for headphone cueing. Often a DJ controller is used with internal mixing to provide easier control over Mixxx than a mouse and keyboard.

External Mixing

> In this kind of setup, Mixxx plays multiple audio files on the computer at the same time and sends each track to a separate audio interface output. The audio interface's outputs are plugged into an external hardware mixer. The hardware mixer performs the actual mixing of the audio signals. On the hardware mixer, there are separate outputs for the mixed signal to play to the audience and for the DJ to use headphone cueing. External mixing is typically used with turntables and *special vinyl records* to manipulate digital music files as if the music was on the vinyl records.
Fig. 1: Using Mixxx together with a DJ controller for internal mixing. The DJ controller has an integrated audio interface that provides two separate stereo outputs.
Fig. 2: Using Mixxx together with a USB audio interface, external mixer, and timecode vinyl for external mixing

GETTING STARTED

2.1 Installing Mixxx

After downloading Mixxx from our Website, you need to install it on your computer.

Windows
> Double-click the Mixxx installation file and go through the installation wizard.

macOS
> Double-click the Mixxx .dmg file and drag the Mixxx icon to your Applications folder.

Linux
> No steps are necessary after you followed the instructions on the download page.

2.2 Upgrading Mixxx

You may safely install Mixxx on top of any previous version. You don't need to uninstall the old version.

Your settings and library will not be removed or reset, but they may be upgraded when you launch the new version of Mixxx. Note that we do not guarantee that new configurations will work on older versions of Mixxx, therefore you may want to make a backup of your existing settings just in case.

For locations in each supported *OS* as well as detailed descriptions of the settings files, go to *The Mixxx Settings Directory*.

2.3 Opening Mixxx

Once you've installed Mixxx, start by opening Mixxx and importing your music to the Mixxx library.

Windows
> Double-click the Mixxx icon on the Desktop. Alternatively, browse your Windows start menu and click the Mixxx icon, or perform a search for `Mixxx.exe`.

macOS
> Double-click the Mixxx icon in the `Applications` folder. Alternatively, drag the Mixxx icon to the dock and double-click it there or search for **mixxx** in Spotlight.

GNU/Linux
> Click the Mixxx icon in the applications menu or launcher of your desktop environment or perform a search for `mixxx`. Alternatively type **mixxx** into the terminal, then hit `Return`. If your *audio interface* is not accessible

from Mixxx because it is used by other applications via PulseAudio, you may close and restart Mixxx using **pa-suspender mixxx**. See *Launching Mixxx from the Command Line* for an overview of Mixxx's command line options.

2.4 Importing your audio files
Fig. 1: Mixxx running on Windows 10 - Choose music library directory dialog

The first time you run Mixxx, you are asked to select a directory where your music is stored. By default, the dialog points to a location where music files are typically held, but you can select any location on your computer.

Click *Select Folder* and Mixxx will scan your music library. Depending on the size of your library this could take some time. All the supported music files Mixxx detects will be listed in the *Tracks - View and edit your whole collection*.

If you want to refresh your library (for example because you added or moved files), you can do this with *Library ▸ Rescan Library* in the menu. If you want to rescan at every launch, select *Preferences ▸ Library ▸ Rescan on startup*.

Warning: On Windows 7 and 8 the import dialog points to your Windows "Music" Library, a special-purpose virtual folder. You can **not** use these virtual folders. Select a regular folder instead, usually "My Music", like pictured above.

2.5 Analyze your library

Mixxx automatically analyzes tracks the first time you load them in a deck. This allows you to run *beatgrid*, *key*, and *ReplayGain* detection on tracks in advance. It also prepares the waveform overviews, detects file corruption, and calculates the *BPM* values.

See also:

For more information, go to *Beat Detection*.

2.5.1 Why you should analyze your audio files

If the tracks have never been played with Mixxx before, the library columns *BPM*, *Duration* and *Key* will be empty or unreliable (because the values are just read from the file's tags if present and might be wrong). Pre-generating beatgrids gives you the chance to double-check the beat markers to make sure they are correct. Errors in beatgrids can cause difficulty when syncing tracks. Furthermore, track analysis takes considerable CPU power and might cause skips in the audio — things you surely don't need while performing.

2.5.2 How to analyze your audio files

Once you have *imported your music library*, press *OK* on the Preferences window.

- Go to the *Analyze* view on the left side panel of the library.

- To analyze a few specific tracks, hold down the `Ctrl` button, and select the tracks that you want to analyze or you can `shift`-select a range of tracks. Once they've been highlighted, click the *Analyze* button on the top right of the library section.

- To analyze the newly added tracks, toggle the *New* label and then click *Analyze*.

- To analyze the entire library, toggle the *All* label and then click *Analyze*.

- The *New* and *All* toggle buttons are located at the top left of the analysis pane - just above the *Preview* and *Cover Art* column titles of the library.

While analyzing, the progress in percentage and total queue length are shown.

2.6 Configuring sound input and output

Before you can start using Mixxx, you need to configure Mixxx to use your sound hardware in *Preferences ‣ Sound Hardware*. You do not need to configure all inputs and outputs.

The *DJ Hardware* chapter explains different types of DJ hardware and how to set them up with the input and output options. For Mixxx to perform the best it can on your system, configure the other *Sound Hardware* preferences in addition to the inputs and outputs.

2.6.1 Output Options

Internal mixing:

Use these outputs if you are not using an *external hardware mixer*. If you are using a controller with a built-in audio interface, use these outputs.

- *Main*: all decks, samplers, microphones, and auxiliary inputs mixed together. This output is sent to the speakers for the audience.

- *Headphones*: all decks, samplers, microphones, and auxiliary inputs assigned to *pre-fader listening*

- *Booth*: same as main output, but has a separate gain control

External mixing:

- *Decks 1-4*: the individual unmixed decks to send to an external mixer

- *Bus Left/Center/Right*: all decks, samplers, and auxiliary inputs assigned to each side of Mixxx's *crossfader*
Fig. 2: Mixxx Sound Hardware Preferences

2.6.2 Input Options

Internal mixing:

Use these inputs if you are not using an external hardware mixer. If you are using a controller with a built-in audio interface, use these inputs.

- *Microphone 1-4*: live microphone or musical instrument inputs
- *Auxiliary 1-4*: other sound sources

External mixing:

- *Record/Broadcast*: When this is configured, Mixxx will record and broadcast from this audio interface input instead of the internal main output mix. If you have a microphone plugged into the mixer, do not configure the Microphone 1-4 inputs.

Either internal or external mixing:

- *Vinyl Control 1-4*: timecode input from turntables or CDJs for manipulating decks 1-4

Using Microphones

THE MIXXX USER INTERFACE

Welcome to the Mixxx interface. This is where the magic happens. You are going to want to get very familiar with this interface because it is the main way to use Mixxx. In this chapter, we present the default interface of Mixxx and describe its elements, knobs and faders.

Fig. 1: The Mixxx interface - Latenight skin

This is the LateNight skin, PaleMoon color theme. It is the default skin supplied with Mixxx 2.3. There are a variety of other skins included with Mixxx. You should explore them all to figure out which one you prefer. This section will focus on LateNight only, though all Mixxx skins provide most of the controls described here.

3.1 Skin Settings

On top, and on the right side of the user interface are the section expansion buttons and options.

Fig. 2: The GUI section quick toggles buttons in the top tool bar

If you click on either *WAVEFORMS*, *4 DECKS*, *MIXER*, *EFFECTS*, *SAMPLERS* or *MICS & AUX* then you will enable control sections for interacting with:

- *Waveform Displays*
- *Decks*
- *Mixer*
- *Effects*
- *Samplers*
- *Microphones & Auxiliary Inputs*

You can also use the specific *Application shortcuts*.

Click the *SETTINGS* button or gear icon (depending on the skin) to open the skin settings menu. This provides common basic controls as well as some skin-specific options.

3.2 Decks

The deck section comes in three sizes: Full, Compact and Mini. You can switch between any of the three sizes by clicking on the *Settings* button or the gear icon. Under the *Decks* section, click on "hide mixer to select". This will automatically select the Compact deck (underlined and bolded). If you wish to change to a different deck size, you can choose FULL or Mini.

> The FULL deck (which is similar in all skins) will show the *Vinyl Control Mode and Cueing controls* and Key controls at the top of the deck section and then the *Hotcue Controls*, *Intro/Outro Markers*, *Loop Controls* at the bottom.
>
> The Compact deck has a reduced set of controls for when you don't need all of them on screen, for example when they're also accessible from your controller. Reverse is removed from the *Playback/Cue Controls*, and the *Hotcue Controls*, *Intro/Outro Markers*, *Loop Controls* and rate adjust buttons are not shown.
>
> The mini deck is of a much smaller size and shows only the waveform and the *Track Information Display*. You can also use minimal decks with the maximized library.

Hint: Hiding the mixer will by default switch to the compact decks.

The deck section allows you to control everything relating to a virtual turntable *deck*. We are going to break this down into sections.
Fig. 3: The Skin Settings menu on the right
Fig. 4: A deck with a track loaded

3.2.1 Track Information Display

Fig. 5: The track information section of the deck

Track Title

The title of the track that was loaded into a deck is displayed on top. This is the same as the title listed under the *Title* column heading in the *Mixxx library*. This information is initially loaded from the track's *metadata*. If the metadata is missing, the title and artist are guessed from the filename.

Track Artist

The artist of the track is listed below. It is the same as listed under the *Artist* column heading in the *Mixxx library*.

Hint: Double-click any track text label to open the *Properties editor* where you can edit all track metadata.

Time Elapsed/Remaining/Both

By default it displays the total elapsed time in the track up to the millisecond. Clicking on the display switches to the *Time Remaining* view, which indicates how much time is left before the track reaches the end. Clicking the display again, both the elapsed and remaining time are shown simultaneously in the format *elapsed time / remaining time*. You can change the default in *Preferences ▸ Decks ▸ Deck options*.

BPM (Tempo)

The number at the top right is the effective *BPM* of the track. This is the detected *BPM* of the track, adjusted for the playback rate of the track. For example, if the track is normally 100 BPM, and it is playing at +5%, then the effective BPM will read 105 BPM.

Hint: You can use a keyboard shortcut and tap with the beat to set the BPM to the speed you are tapping, go to *Using a Keyboard* for more information.

Key

The key displays the current musical key of the loaded track after pitch shifting. The key is displayed below the BPM (Tempo). This is the same as the key that is shown under the *Key* column heading in the *Mixxx library*. Clicking the key will expand it to reveal more options:

- **Pitch Control**: This changes the track pitch independent of the tempo. Left-clicking the - button decreases the pitch by one semitone. Right-clicking it decreases the pitch by 10 cents. Left-clicking the + button increases the pitch by one semitone. Right-clicking it increases the pitch by 10 cents.
Fig. 6: The Key options.

- **Sync and Reset Key**: Left-clicking the *MATCH* button sets the key to a pitch that allows harmonic transition from the other track. It requires a detected key on both involved decks. Right-clicking it resets the key to the original track key.

Cover Art

The cover art of the track loaded into the deck is displayed on the left side of the track. This is the same as the cover art that is shown under the *Cover Art* column heading in the *Mixxx library*. In Deere skin you can choose to enable or disable the cover art by clicking the gear icon in the upper right corner, then toggling the *Decks ▸ Cover Art* option. Clicking on the cover art will expand it into a full blown image. The cover art is also shown in the Vinyl Widget next to the *parallel waveforms*.

3.2.2 Waveform Displays

The waveform section of a deck allows you to visualize the audio changes that occur throughout the track, you can basically "see" your music.

By default the waveform displays are aligned parallel to each other in order to make *beatmatching* easier, as it is possible to beatmatch visually by aligning the beats that appear in each waveform.

Fig. 7: Parallel waveforms in the default Mixxx skin (LateNight, PaleMoon theme)

Depending on the skin, Mixxx displays either parallel waveforms (default) or separate waveforms. LateNight and Tango skins only have resizable parallel waveforms while Shade skin provides only separate waveforms. In Deere skin you can select your preferred appearance by clicking the gear icon in the upper right corner, then toggling the *Skin Settings ▸ Parallel Waveforms* option.

> **Warning:** If you have a slower computer and notice performance issues with Mixxx, try lowering the frame rate or changing the waveform type in *Preferences ▸ Waveforms*.

Waveform summary

The big waveform summary shows the waveform envelope of the track near the current playback position and is updated in real time. The mouse can be used on the waveform to pause, scratch, spin-back or throw the tracks. Right-clicking on the waveforms allows you to drag with the mouse to make temporary pitch adjustments.

Hint: You can select from different types of displays for the waveform, which differ primarily in the level of detail shown in the waveform, in *Preferences ‣ Waveforms ‣ Waveform type*.

Right next to the waveform view there are controls to adjust the *beatgrid*. You may stretch, compress or shift the beatgrid in case it was not detected correctly (see *Beat Detection*). There are also controls to shift cue points in case they are set off after decoder changes, for example when you migrated your Mixxx library to another computer or operating system. These controls are hidden by default and need to be enabled in the skin settings menu.

Fig. 8: Beatgrid editing controls in the default Mixxx skin (LateNight, PaleMoon theme)

In Deere skin, these controls are located in the expandable BPM section inside the decks.

Waveform overview

The smaller, zoomed-out version of the waveform shows the various markers within the track as well as the waveform envelope of the entire track. This is useful because they allow DJs to see breakdowns far in advance. As visual aid, the part of the track that has already been played is darkened.

Clicking somewhere on the waveform allows you to jump to an arbitrary position in the track. Like with the Waveform summary, you can select from different types of displays for the overview in *Preferences ‣ Waveforms ‣ Overview type*.

Vinyl Widget

The line on the vinyl widget rotates if the track moves. It is similar to the position marker found on scratch records. Use the mouse on the vinyl widget to pause, scratch, spin-back or throw tracks - just like a real record. When performing *Loop rolls* or right-clicking on the vinyl during playback, a "ghost" marker hints where the playback will continue. The Vinyl Widget is hidden by default and can be enabled in the *Deck Options Button Grid*.

If *vinyl control* is enabled, it can optionally display the time-coded vinyl signal quality. Activate the option in *Preferences ‣ Vinyl Control ‣ Show Signal Quality in Skin*.

Waveform Zoom

Using the mouse-wheel everywhere in the waveform summary will zoom the waveform in or out. You can choose whether to synchronize the zoom level between the decks in *Preferences ‣ Waveforms*.

Waveform Marker

While mixing, various additional markers can appear on the waveforms:

• **Position marker**: The static vertical line in the center of the waveform summary indicates the playback point of the deck. The waveform overview includes a vertical line to show the current position within the track.

- **Beat marker**: The regular white lines on the waveform summary indicate the locations of beats in the audio, also called the *beatgrid*.

- **Cue marker**: Indicates the position of the *cue point*.

- **Hotcue marker**: Indicate the position and number of a *hotcue* point if set.

- **Loop-in/Out marker**: Indicate the beginning and the end of a loop.

- **Loop overlay**: Is drawn between the Loop-in/Out markers and changes color depending on whether a loop is activated or not.

- **Track ending notification**: If the waveform overview flashes red, only 30 seconds are left before the track reaches the end.

3.2.3 Deck Options Button Grid

Fig. 9: The Options Button Grid of the deck

The six buttons at the bottom right below the waveform allow you to configure the deck. Starting from the top row (left to right) and the bottom row (left to right), the buttons are as follows:

Slip Mode Toggle
> When active, the playback continues muted in the background during a loop, reverse, scratch, etc. Once disabled, the audible playback will resume where the track would have been.

Quantize Mode Toggle
> If enabled, all cues, hotcues, loops, and beatloops will be automatically *quantized* so that they begin on a beat.

Beat-grid Adjust Button
> Clicking this button adjusts the track beat-grid so that the current position is marked as a beat. This is useful if Mixxx was able to accurately detect the track's *BPM* but failed to align the beat markers on the beats. For more information, go to the chapter *Beat Detection*.

Eject Track Button
> Clicking this button ejects the track from the deck. If no track is loaded the last-ejected track (of any deck) is reloaded.
>
> Double-click to reload the last replaced track. In empty decks the second-last ejected track is reloaded.
>
> Alternatively you can use a keyboard shortcut, go to the chapter *Using a Keyboard* for more information.

Repeat Mode Toggle
> If enabled, the repeat mode will jump back to the beginning and continue playing when the track finishes.

Keylock Toggle
> *Key lock* locks the track's pitch so that adjustments to its tempo via the rate slider do not affect its pitch. This is useful if you would like to speed up or slow down a track and avoid the "chipmunk" effect that speeding up vocals has.

3.2.4 Playback/Cue Controls

Fig. 10: The playback and cueing controls of the deck

Play/Pause Button
Clicking the Play/Pause button starts and pauses the playback.

See also:

The actual behavior of the Play/Pause button depends on the selected *Cue mode*.

Cue Button
If the button is pressed while the track is playing, the play position jumps to the *Cue point* on the track and the track is paused. Once the track is paused at the Cue point, you can preview it by holding the Cue Button. If you have not moved the Cue point yet, the default point is at the track's beginning.

See also:

The actual behavior of the Cue button depends on the selected *Cue mode*.

Reverse button
Press and hold this button to temporarily play the track backwards during regular playback. Right-click and hold for 'Censor' mode. This reverses the track while the playback continues muted in the background. On release playback is resumed where the track would have been if it had not been reversed.

Setting Cue points

Every track has a Cue point, by default on its beginning. Unlike with *Hotcues*, you can't delete, but only move Cue points.

The Cue point is moved according to the selected Cue mode, as explained below.

Auto Cue

Mixxx automatically seeks to the saved Cue point on track load. If none exists, seeks to the beginning of the track.

Select an alternative load point in *Preferences ‣ Decks ‣ Track load point*.

Using Cue Modes

Mixxx supports various Cue modes that adapt to fit other devices in your setup or your personal preferences. The actual behavior of the Play, Pause, and Cue buttons depends on the selected Cue mode. To change the Cue mode, go to *Preferences ‣ Decks ‣ Cue mode*.

Mixxx mode (default)

- **While paused at Cue point (Cue button lit):**

  - Hold down the Cue button to play the track from the *Cue point*, as long as the button is pressed. After releasing the Cue button, the track jumps back to the Cue point and pauses again.

  - Press Play/Pause before releasing the Cue button to continue playback normally.

- **While paused not at Cue point (Cue button flashing)**:

    - Tap the Cue button to store the current position as new *Cue point*.

- **While playing:**

    - Tap the Cue button to jump to the *Cue point* and pause playback.

Mixxx mode (no blinking)

- Same as the default Mixxx mode, but without blinking indicators.

Pioneer mode

- Same as Mixxx mode, but the buttons are more flashy matching a Pioneer CDJ player.

    - The Play/Pause button flashes once per second when a track is paused.

    - The Cue button flashes twice a second when the next push will move the *Cue point*.

Denon mode

- **While paused at Cue point (Cue button lit) - same as Mixxx mode**:

    - Hold down the Cue button to play the track from the *Cue point*, as long as the button is pressed. After releasing the Cue button, the track jumps back to the *Cue point* and pauses again.

    - Press Play/Pause before releasing the Cue button to continue playback normally.

- **While paused not at Cue point (Play button flashing)**:

    - Tap the Cue button to move the track back to *Cue point*.

    - Tap the Play/Pause button to move the *Cue point* to the current position and start playback.

- **While playing - same as Mixxx mode**:

    - Tap the Cue button to jump to the *Cue point* and pause playback.

Numark mode

- Same as Denon mode, but without a flashing Play/Pause button.

- This mode is useful if you want to implement a custom skin with 3-button decks, featuring a Cue button, a dedicated Pause button, and a Play/Stutter button.

CUP (Cue + Play) mode

- Press the Cue button to jump to the *Cue point* and pause, continuing playback only when either the Cue button is released or Play/Pause is pressed.

- If the Cue button is pressed while paused, the *Cue point* is first moved to the current position.

Hint: Use the *Hotcue Controls* to place more reference points on a track.

See also:

You can also use keyboard shortcuts for Cueing. Go to *Using a Keyboard* for more information.

3.2.5 Intro/Outro Markers

Fig. 11: The Intro/Outro End and Start Markers

You can use the Intro/Outro Markers with Auto DJ to mix in and out of points but unlike hotcues, they do not mark only one point. The intro and outro are sections and each section is defined by two points. See *Auto DJ - Automate your mix*.

Intro Start/End Markers
> The analyzer places the intro start point at the first sound of a track and you can decide where to place the intro end point. Left-clicking on the marker when it is set jumps to the marker. When it is not set, clicking sets the marker to the current play position. Right-clicking on the marker when it is set clears the marker.

Outro Start/End Markers
> The analyzer places the outro end point at the last sound of a track and you can decide where to place the outro start point. Left-clicking on the marker when it is set jumps to the marker. When it is not set, clicking sets the marker to the current play position. Right-clicking on the marker when it is set clears the marker.

Note: If *quantization* is enabled, left-clicking on any of the markers snaps to the nearest beat.

3.2.6 Transport Controls

Fig. 12: The transport controls of the deck

Beatjump/ Loop Move Size
> You can type, use the arrow keys or scroll vertically in the input box to select the number of beats to jump or move, with the Beatjump Forward/ Backward buttons.

Beatjump Backward button
> Clicking this while the loop is inactive will make the track jump backward by the set number of beats (left click) or by one beat (right click). Clicking this while the loop is active will move the loop backward by the set number of beats (left click) or by one beat (right click).

Beatjump Forward button
> Clicking this while the loop is inactive will make the track jump forward by the set number of beats (left click) or by one beat (right click). Clicking this while the loop is active will move the loop forward by the set number of beats (left click) or by one beat (right click).

### 3.2.7 Vinyl Control Mode and Cueing controls

Fig. 13: The Vinyl Control Mode and Cueing controls of a deck

The control above the waveforms relate to the *vinyl control* feature in Mixxx and is **hidden** in the default *Mixxx user interface*. Click the gear icon in the upper right corner, then toggle *Skin Settings ▸ Vinyl Control Options*, or use the specific *Application shortcuts* to show or hide the section.

See also:

For more information on how to use Vinyl control in your setup, go to the chapter *Vinyl Control*.

Vinyl button

This button enables *vinyl control*. When enabled in Mixxx, the track on the Mixxx deck is controlled by the external vinyl control.

Pass button

This button enables passthrough. When enabled, audio from an external vinyl can be played on the Mixxx deck.

Abs/Rel/Const button

- **Absolute mode**: The track position equals needle position and speed.
- **Relative mode**: The track speed equals needle speed regardless of needle position.
- **Constant mode**: The track speed equals last known-steady speed regardless of needle input.

Cue/Hot button

This button determines how *cue points* are treated in vinyl control relative mode:

- **Off**: Cue points are ignored.
- **Cue**: If the needle is dropped after the cue point, the track will seek to that cue point.
- **Hot**: The track will seek to the nearest previous *hotcue* point.

3.2.8 Sync and Rate Controls

The rate controls allow you to change the rate at which tracks are played. This is very useful for *beatmatching* two tracks together in a mix. You can control rate changes also from your computer's keyboard, see the chapter *Using a Keyboard* for more information.

SYNC button

- **Left-Click**: Changes the *rate* of the track so that the *BPM* and *phase* of the track matches the other deck.
- **Right-Click**: Only changes the *rate* of the track to match the other deck but does not adjust the *phase*.

Decks and samplers now pick which sync target to sync to on the fly. Decks can't sync to samplers and samplers can only sync to decks. The sync target for samplers is:

- The sync leader, identified by the lit sync-lock button and the crown symbol.
- The first deck (in numerical order) that is playing a track with a detected beatgrid, and has a rate different than zero.

Fig. 14: Rate controls

- The first deck (in numerical order) that has a track loaded with a detected beatgrid, no matter if it is playing or stopped.

So basically, if you sync a sampler and both deck 1 and deck 2 are playing a track with a beatgrid then deck 1 will win since numerically it is first. The sync targets for decks are chosen with the new sync lock feature, see *Sync Lock* for more information.

Pitch/Rate slider

The slider allows you to change the speed of the song, by default up to 10% from the tracks original tempos. The speed will increase as you move the slider up, opposite to the behavior found on DJ turntables and *CDJ*. Right-clicking on the slider will reset the tempo to its original value.

Pitch Rate Display

The percent that the track's rate is sped up or slowed down is noted here. Is the Pitch/Rate slider positioned at the center, the pitch rate display is at +0.0%, which indicates no change.

Hint: To make the rate and/or pitch automatically reset whenever a new track is loaded go to *Preferences ‣ Decks ‣ Speed (Tempo) and Key (Pitch) options ‣ Reset on track load*.

Temporary Pitch/Rate buttons (Nudge)

Pushing the diagonal arrow buttons is like nudging the metal edge of a turntable, or the outer edge of a CD player. It will give the track a push or pull forwards or backwards. If the buttons are released the previous tempo is restored. The buttons can act as either a fixed *pitch bend* or a *ramping pitch bend*.

Pitch/Rate buttons

Clicking the - button will set the pitch/rate lower while the + button will set the pitch/rate higher. This is like moving the pitch slider up or down by a fixed amount. Unlike using the temporary pitch/rate buttons, the change is permanent so these button s don't need to be held down.

See also:

To customize the amount by which the buttons alter the pitch of the track, the slider range as well as the direction, go to *Preferences ‣ Interface ‣ Adjustment buttons ‣ Permanent / Temporary*.

Hint: If the tempo of a track changes, you'll notice that the tone changes based on the pitch used (e.g. playing at faster pitch gives a chipmunk sound). You can enable the *Keylock* feature to maintain a constant tone.

3.2.9 Loop Controls

Fig. 15: The beatloop and looping controls of the deck

In this section of the Mixxx interface you can control (beat-)loops and set the loop points of a track. You can also shift loops using the *beatjump / loop move controls* shown at the right side of the looping controls.

Beatloop size

> The input box allows you to set the size of the loop in beats to set with the Beatloop button. Changing this resizes the loop if the loop already matches the size. If a loop is set, a loop overlay will be drawn on the *waveforms*.

Beatloop

> Left-clicking the Beatloop button starts a loop over the set number of beats. If quantize is enabled, it snaps to the nearest beat. This works for manually placed loops as well as automatic loops set by the beatlooping buttons. Depending on the current status of the loop, the loop overlay on the waveforms changes color. Right-clicking the Beatloop button temporarily enables a rolling loop over the set number of beats. Playback will resume where the track would have been if it had not entered the loop.

Double loop

> Clicking on the arrow pointing up will double the current loop's length up to 64 bars. The length of the loop overlay in the waveform will increase accordingly.

Halve loop

> Clicking on the arrow pointing down will halve the current loop's length down to 1/32 bars. The length of the loop overlay in the waveform will decrease accordingly.

Loop-In

> This button allows you to manually set the start point of a loop. A loop-in marker is placed on the waveform indicating the position. If clicked when a loop was already set, it moves the start point of a loop to a new position.

Loop-Out

> This button allows you to manually set the end point of a loop. A loop-out marker is placed on the waveform indicating the position. If clicked when a loop was already set, it moves the end point of a loop to a new position.

Reloop

> Left-clicking this button toggles the current loop on or off. If the loop is ahead of the current position, looping will start when the loop is reached. This works only if the Loop-in and Loop-Out marker are set. Right-clicking this button enables the loop, jumps to Loop-in marker and stops playback.

Hint: If you are playing inside a loop and want to move the end point beyond its current position in the track, click on the *Beatloop* button first and when the play position reaches the desired position, click on the Loop-Out button.

See also:

If the *Quantize* mode is enabled, the loops will automatically snap to the nearest beat. This is disabled by default, click on the *Quantize Mode Toggle* to enable it.
3.2.10 Hotcue Controls

Fig. 16: The hotcue controls of the deck

To jump in between different parts of a track, you can use these numbered buttons. You can also use keyboard shortcuts, go to *Using a Keyboard* for more information.

Setting Hotcues

Clicking on a numbered button will set a *hotcue* at the current play position on the track. A marker with the corresponding number will appear in the waveform and the button will light up to indicate that the hotcue is set.

Playing Hotcues

- **While playing**: Tap a hotcue button to cause the track to instantly jump to the location of the hotcue and continue playing. If you are playing inside a loop and tap a hotcue whose position is outside of the loop, then the track still instantly jumps to the hotcue but the loop will be deactivated.

- **While stopped**: Tap a hotcue button to cause the track to instantly jump to the location of the hotcue and start playing as long as the button is pressed. Press the *Play* keyboard shortcut while the hotcue button is pressed to continue playback, then release the hotcue button.

Highlighting Hotcues

It's possible to add labels or colors to your hotcues to make them easier to distinguish and make it possible to get their "meaning" at first glance.

Labels and colors can be assigned from the Hotcue context menu, which can be opened by right-clicking either the hotcue button or the hotcue marker in the waveform overview.

Hint: Mixxx allows *customizing the color palette* and *bulk replacing hotcue colors*.

Deleting Hotcues

To delete a hotcue, right-click on the hotcue button or the waveform marker in the overview waveform to open the context menu, then click the trash icon.

Note: Mixxx supports up to 36 hotcues per deck. By default, only some of them are visible in the user interface. You can customize your *keyboard* or *controller* mappings to use all of them.

See also:

Just as with the loops (see above), if the *quantize* mode is enabled, the hotcues will automatically snap to the nearest beat. This is disabled by default, click on the *Quantize Mode Toggle* to enable it.

3.3 Mixer

The mixer section of the *Mixxx user interface* allows you to control how the different decks and samplers are mixed together.

Fig. 17: The mixer section

3.3.1 Channel Faders and Level Meters

Level meters

The left meter shows the volume level for the left deck, while the right meter shows the volume level for the right deck. The double meter at the center shows the current volume of the main output's left and right channel separately. These should stay at the top of the green region, with the loudest parts of the music (transients) briefly going into the yellow region. They should never be in the red region. Refer to *Setting your levels properly (gain staging)* for more details.

Line faders

The two large faders on either side of the level meters are the deck volume faders, also known as Channel- or Line-faders. Adjusting these controls the volume of each deck.

Hint: Some DJ's prefer to use the line faders over the crossfader for fading between tracks. Try it, you may like it.

3.3.2 Equalizers and Gain Knobs

Gain Knob

The gain knob (orange) above the volume fader allows you to adjust the gain applied to the deck. Use this to compensate for the differences in recording levels between tracks. In general, you should adjust this knob so that the track's *level meter* stays around the top of the green region with the loudest parts of the track (the transients) briefly going into the yellow region. **Do NOT turn the Gain Knob up so much that the level meter is in the red region. At this point the track is clipping, which sounds bad and could damage equipment.**

Note: By default, Mixxx automatically applies an additional ReplayGain so tracks have approximately equal loudness at unity gain. Your tracks must be *analyzed* to take advantage of this feature. When an unanalyzed track

---

Fig. 18: EQ Controls

is loaded, Mixxx calculates its ReplayGain value, but will not apply a newly calculated ReplayGain value to a track after it has already started playing (to avoid a sudden change in the gain of a playing track).

See also:

For an explanation of why you should set your gains this way, see *Setting your levels properly (gain staging)*.

EQ Knobs

> The low, mid, and high EQ knobs allow you to change the filters of the audio. This allows you to selectively reduce or boost certain frequency ranges of the audio.

> **Warning:** Be careful not to raise the EQs so much that the signal clips, indicated by a *level meter* being in the red region. See *Setting your levels properly (gain staging)* for a more detailed explanation.

Kill Switches

> The small boxes next to each EQ knob are called *kills*. Hold these buttons to fully remove that frequency range. Short click on the buttons for latching. When in Latch mode, click again to restore the frequency range. If the Kill switches do not work as expected, check the high/low shelf EQ settings in the preferences.

Quick Effect Super knob

> This knob lets you control the Meta knob of the deck's Quick Effect. 'Filter' is the default. Right-click this knob to center it. This is equivalent to 'no audible effect' for the built-in filter effects only (Filter, Moog Ladder 4 Filter). The button next to the knob toggles the effect. It provides the same latching capabilities like the EQ Kill switches.

See also:

You can customize the EQ settings in *Preferences ‣ Equalizer*.

3.3.3 PFL/Headphone Button

Fig. 19: The headphone buttons of both decks in the mixer

The headphone button is also known as the *pre-fader listen or PFL* button and allows you to use headphone cueing. That is, it allows you to hear the track you will play next in your headphones before your audience hears it. This helps you plan when to start the next track and manipulate it to make it blend better with the currently playing track (for example, by synchronizing the beats, setting a loop, or using EQs). Pressing the PFL button plays the track on the headphone output at full volume regardless of the position of the crossfader or the deck's line fader. To play a track in your headphones but not have the audience hear it, press the PFL button and move the crossfader all the way to the opposite side of the deck or turn the deck's volume fader all the way down.

Note: Headphone cueing is only available if you have configured a Headphone Output in *Preferences ‣ Sound Hardware*.

Note: If you use an external hardware mixer, plug your headphones into that rather than your sound card. Use the headphone buttons on the mixer rather than the buttons in Mixxx.

3.3.4 Crossfader

Fig. 20: The crossfader section of the mixer

The *crossfader* determines the actual volume of each deck when moving the slider from left to right. If both decks are playing and the crossfader is in its default center position, then you will hear both decks. Right-clicking on the crossfader will reset the slider to its default position.

To move the crossfader left or right, you can use the *keyboard shortcut* G and H. To apply small crossfade left and small crossfade right, the *shortcuts* are Shift + G and Shift + H respectively.

You can reverse the configuration of the crossfader, so that the right deck is on the left end of the crossfader and vice versa. This is also known as *Hamster Style*. To adjust the crossfader to your style of mixing, go to *Preferences ‣ Crossfader*.

The *crossfader* orientation switches determine to which side of the crossfader the deck is assigned. It can be set to the left or right side, or to the center where it is unaffected by the crossfader knob.

Hint: Using the *AutoDJ* feature in Mixxx, you can automate the crossfade between the decks.

3.3.5 Headphone and Main Mix Controls
Fig. 21: The headphone and main mix knobs

Headphone Mix knob

Allows you to control how much of the Main output you hear in the *Headphones* output. It works like a crossfader between the stereo Main and stereo *PFL* signal. If the knob is set to the left, you only hear the PFL signal, which is the usual position for prelistening tracks.

This can be used to practice DJing with only one stereo output and a set of either speakers or headphones.

Additionally, this can be used to mix in headphones when you cannot hear the speakers connected to the *main* output and there are no booth monitor speakers. Some DJs prefer to use this knob to mix in headphones all the time, but many find it to be a difficult way to play. If there is only one set of speakers and no booth monitors, you can avoid the need to mix in headphones by setting up the speakers behind you so both you and your audience can hear them.

Note: Don't forget to activate the *PFL* button on the deck you want to listen to in your headphones.

Head knob (Headphone gain)

This knob controls the gain applied to the headphone output signal that Mixxx sends to your sound card. Generally, this knob should not be adjusted. To adjust the volume in your headphones, adjust your sound card's gain on the headphone output. Most external sound cards have a gain knob specifically for the headphone jack. If you use an onboard sound card for your headphones, adjust the gain control in your *OS* mixer program. If your sound card only has one gain knob that controls both the Main output and the headphone output, then adjust the *Head* knob in Mixxx to control the volume of your headphones without affecting your Main output.

Note: Not all controls may be present in all skins anymore. However, these controls can be mapped to keyboards and MIDI controllers. See *Mixxx Controls* for detailed information.

Headphone Split Cue button

If activated, two mono signals are sent to the headphone output instead of one stereo signal. The main signal plays in the right channel, while the cueing signal plays in the left channel. You can still adjust the *Head Mix* knob to control the mix of the Main and cue signals in the left channel.

Balance Knob

This knob allows you to adjust the *balance* (left/right orientation) of the Main output.

Main Knob

The Main Gain Knob controls the gain applied to the Main output signal that Mixxx sends to your sound card, Internet broadcasting servers, and recorded mixes. Generally, this knob should not be adjusted. To change the output volume, a gain control should be adjusted as close to the speakers as possible for the best signal-to-noise ratio throughout your signal chain. Ideally, the volume would only be adjusted by adjusting the gain on the power amplifier. On active speakers, including computer speakers, studio monitors, and PA systems that do not require a separate amplifier, this means adjusting the gain on the speakers (which may be labeled "Volume").

As a DJ, you may not have access to the power amplifier. In that case, adjust the volume by adjusting the gain on the equipment closest to the power amplifier that you have access to. Typically, this is a DJ mixer. If you are not going through a mixer, adjust the gain of your sound card. If your sound card does not have any controls on it (for example, for sound cards built into computers), adjust the sound card settings with your *OS* mixer program. The Main Gain Knob in Mixxx should be a last resort for adjusting volume.

Warning: In no case should any part of the signal chain be clipping, indicated by a level meter going into its red region or an LED labeled "clipping" turning on.

See also:

For an explanation of why you should set your gains this way, see *Setting your levels properly (gain staging)*.

3.4 Samplers

Fig. 22: Sample decks

Fig. 23: Sample decks expanded

Samplers are miniature decks. They allow you to play short samples and jingles but also additional tracks in your mix. They come with a small overview waveform and a limited number of controls. All controls work just like on the regular decks, see *Decks*.

The Sampler section can be **hidden** in the *Mixxx user interface*. Click the *SAMPLERS* button at the top of the user interface, or use the specific *Application shortcuts* to show or hide the section.

3.4.1 Waveform Display

Waveform overview
The waveform shows the various markers within the track as well as the waveform envelope of the entire track. Clicking somewhere on the waveform allows you to jump to an arbitrary position in the track.

Waveform Marker
While mixing, some additional markers can appear on the waveforms:

- **Position marker**: A vertical line indicates the playback point of the sample deck.

- **Hotcue marker**: Indicate the position and number of a *hotcue* point if set.

3.4.2 Track Information Display

Track Artist/Title
The artist and title of the track that was loaded into a sampler deck is displayed here.

BPM (Tempo)
The number at the top right is the effective *BPM* of the track. Tap the BPM to set the BPM to the speed you are tapping.

3.4.3 Sample Deck Options Button Grid

The buttons grid next to the waveform overview allow you to configure the sampler deck. Starting from the top row (left to right) and the bottom row (left to right), the buttons are as follows:

Repeat Mode Toggle
If enabled, the repeat mode will jump back to the beginning and continue playing when the track finishes.

Eject Track Button
Clicking this button ejects the track from the deck.

Keylock Toggle

Keylock locks the track's pitch so that adjustments to its tempo via the rate slider do not affect its pitch.

Crossfader Orientation Toggle

The *crossfader* orientation determines to which side of the crossfader the sampler is assigned. It can be set to the left or right side, or to the center where it is unaffected by the crossfader knob.

3.4.4 Sample Deck Controls

Play/Pause button

Clicking the button always starts playback from the *cue point*. If playback is already enabled the play position will jump back to the *cue point*. Right-clicking on the button will stop playback and seek the play position to the beginning of the sample.

Sync Button

Syncs the Sampler deck to a regular deck, as described in *Sync and Rate Controls*.

- **Left-Click**: Changes the *rate* of the track so that the *BPM* and *phase* of the track matches the sync target.

- **Right-Click**: Only changes the *rate* of the track to match the sync target but does not adjust the *phase*.

Hotcue Controls

To jump in between different parts of a sample, you can use these numbered hotcue buttons.

PFL/Headphone Button

If active, the *pre-fader listen or PFL* button allows you to listen to the track in your headphones.

Gain Knob

Allows you to adjust the gain applied to the track.

Level Meter

Shows the level of the signal and can be adjusted with the Gain knob.

Pitch/Rate slider

The slider allows you to change the speed of the sample. Right-clicking on the slider will reset the tempo to its original value.

3.5 Effects

Fig. 24: Collapsed effect unit

Fig. 25: Expanded effect unit

Mixxx comes with some built in sound effects that can be chained together in effect units. Effect units can be freely assigned to different decks as well as other inputs. The buttons for routing decks to effect units are in the *Decks*.

See also:

The *Effects* chapter has a more detailed explanation of the effects system.

3.6 Microphones & Auxiliary Inputs

Fig. 26: The Microphone section

The microphone section is **hidden** in the default *Mixxx user interface*. Click the *MICS & AUX* button at the top of your user interface, or use the specific *Application shortcuts* to show or hide the section.

See also:

The *Using Microphones* chapter has detailed instructions for setting up microphones with various hardware.

3.6.1 Microphone Controls

Talk Button
> Hold this button and talk to mix the microphone input into the Mixxx Main output. Short click on the button for latching. This is handy for talking for an extended period, for example when *streaming* a radio show. When in Latch mode, click again to mute the microphone input.

Mix Orientation Toggle
> This control determines the microphone input's mix orientation. Either to the left side of crossfader, to the right side or to the center (default). Clicking cycles through all the options.

Microphone Volume Meter
> This displays the microphone volume input signal strength.

Microphone Gain Knob
> Use this knob to adjust the gain of the microphone output. Try to keep the volume at a reasonable level to avoid signal clipping.

3.7 Preview Deck

Fig. 27: The Preview Deck with a track loaded

The Preview Deck is a special deck that allows you to pre-listen to tracks in the headphones before using them in your mix. Pre-listening to a track does not change its *Played* state as well as the play counter and is not logged in the *History*. Press CTRL + 4 (Windows/Linux) or CMD + 4 (Mac) to display the Preview Deck.

The features in detail:

- **Track Artist/Title**: The artist and title of the track is displayed here. This is the same as that listed under the *Track* and *Title* column heading in the *Mixxx library*. This information is initially loaded from the track's *metadata*.

- **Eject Track button**: Clicking this button ejects the track from the deck.

- **Play/Pause button**: Clicking the button starts and pauses the playback. Right-clicking on the button will stop playback and seek the play position to the beginning of the tracks.

- **Waveform overview**: Shows the various markers (Cues, Hotcues) within the track as well as the waveform envelope of the entire track. Clicking somewhere on the waveform allows you to jump to an arbitrary position in the track.

- **Gain slider**: Move the slider to adjust the gain of the track.

- **Volume Meter**: Shows the current volume of the track. If it's too loud and distorted, a peak indicator flashes red.

See also:

For more information, go to the chapter *Previewing Tracks*.

THE MIXXX LIBRARY

## 4.1 Overview of the Library features

Fig. 1: The Mixxx Library

The library manages all of your music files. This is where you can find the tracks you want to play and load them into a *deck* or *sampler*; see *Loading Tracks*. Mixxx imports your music library automatically when it is run for the first time, see *Changing music directories* for more information.

If you want to backup (or delete) your library refer to *The Mixxx Settings Directory* and look for `mixxxdb.sqlite`.

The sidebar on the left contains different collections of music. The track list view on the right displays the tracks in those collections.

Sidebar:

- **Search**: Search for tracks in your Mixxx library.

- **Tracks**: View and edit your whole collection.

- **Auto DJ**: Automatically load and crossfade tracks for unattended mixing.

- **Playlists**: Arrange tracks in a set order.

- **Crates**: Organize tracks in (unordered) collections.

- **Computer**: Navigate, view, and load tracks from folders on your hard disk and connected devices.

- **Recordings**: Record your mix and view previous recordings.

- **History**: Browse lists of tracks played in past mixing sessions.

- **Analyze**: Generate Mixxx-specific data for tracks before a gig.

- **External Libraries**: Access your existing iTunes, Traktor, Rhythmbox, and Banshee libraries.

Track List:

- **Sort**: Display and sort track collections by different criteria.

- **Load**: Drag tracks you want to play to the waveform display.

- **Edit**: Rate tracks and edit track properties.

4.2 Tracks - View and edit your whole collection

A sortable list of all the tracks in your music library.

Customizing the view

Move columns by clicking a column header and dragging it to another position. Right-click on a column header to show or hide individual columns. Adjust the column width to fit the contents of the rows by double-clicking on the separator between two column headers.

Sorting Tracks

Tracks are automatically sorted by the active column. Click on the active column header to reverse the sort order. Click on another column header to change the active column.

- **Multi-Column sorting**

  You can sort multiple columns by clicking *up to three* column headers you wish to sort your tracks by. This makes searching for tracks in a large list more efficient. Clicking twice on a column header will reverse the sort order.

  Example:

  1. Click on the *BPM* column header -> list is sorted by BPM

  2. Click on the *Year* column header -> list is sorted by year. If year is equal, it is still sorted by the last criteria, e.g. BPM.

  3. Click on the *Genre* column header -> list is sorted by genre. If genre is equal, it is still sorted by year. If genre and year is equal, then it is sorted by BPM.

- **Random sorting**

  Click on the *Preview* column header to randomly sort tracks.

- **Sort keys by circle of fifths**

  Click on the *Key* column header. The order starts with *C* at the top, then its relative minor (*a*), then adds 1 sharp (*G*), then *G*'s relative minor (*e*), and so adding sharps/removing flats around the circle of fifths. For *Lancelot* notation, it starts with *G#m* at the top, which is *1A* in that notation, and proceeds alphanumerically (minor keys appear before their relative major keys in this case).

Rating tracks

Make sure the *Rating* column is not hidden. Rate tracks by hovering over the rating field and clicking the stars.

Track Inline editing

Mixxx reads *metadata* from the tracks to fill the columns of the library. Double-click on a field, edit the data, and hit Enter when you are done. Go to the chapter *edit metadata* for detailed information.

Loading tracks

To load a track into a *deck*, you can either drag it to the waveform display, use the context menu or use *keyboard shortcuts*. Go to the chapter *Loading Tracks* for detailed information.

Importing tracks

Mixxx imports your music library automatically when it is run for the first time. Go to the chapter *Changing music directories* for detailed information.

Previewing Tracks

To pre-listen to tracks in your headphones without loading them to a regular deck, click the 🎧 ▸ icon in the *Preview* column. Go to the chapter *Previewing Tracks* for detailed information.

Cover/Album Art

Mixxx can display cover art it finds for a track in the library. It will search for available cover art in the following places in order and will use the first one it finds:

1. The first image saved in the track's ID3v2/Vorbis *tags*

2. An image file in the track folder (if there is only one image file there.)

3. `%track-file-base%.jpg` in the track directory for `%track-file-base%.mp3`

4. `%album%.jpg`

5. `cover.jpg`

6. `front.jpg`

7. `album.jpg`

8. `folder.jpg`

Mixxx supports the following image types: jpg, jpeg, png, gif, bmp

Rescan Library

If you want to manually refresh your library without exiting (for example because you added or moved files) you can do this with *Library ▸ Rescan Library* in the menu at the top of the application window. You can prompt an automatic rescan when Mixxx is started under *Preferences ▸ Library ▸ Rescan on startup*.

Rescanning the library will add new files to the library and mark tracks as missing if the corresponding file has been deleted. It tries to detect and relocate missing tracks if files have been renamed or moved into another directory.

Automatically refreshing the metadata of tracks when files have been modified by an external application is not supported, yet. In this case you need to select the affected tracks and (re-)import their metadata from file tags.

4.2.1 Track list context menu

Right-clicking on selected tracks in the track list reveals the context menu:

- **Add to Auto DJ**

  Adds the content of the selection to either the *bottom* or *top* of the *Auto DJ* playlist for automatic mixing. The *replace* option deletes the Auto DJ queue first, and then fills it with the selected tracks.

- **Load to**

  Loads a selected file to one of the available *Decks*, *Samplers* or to the *Preview Deck*. Alternatively simply drag it to the *Waveform Displays*. The number of available decks and samplers might differ, depending on the selected skin. Note that you can't load multiple files at once.

- **Add to Playlist**

  Add selected tracks to an existing playlist, or drag the selection to a playlist crate in the sidebar. Choose *Create new playlist* to put them into a new playlist.

- **Crates**

  The checkbox shows in which existing crates the selection is in. Changing the crates selection does not collapse the menu, which allows much easier categorization of tracks without going through the menu from scratch. Choose *Create new Crate* to put them into a new crate.

- **Select Color**

  Assign a color to all selected tracks to indicate mood, energy etc. Select the black button at the top left to remove the color.

- **Metadata**

  – **Import from File Tags**: If the track's *metadata* changes, (e.g. if you used iTunes to edit it,) this option lets you save the new values for the selected tracks to the Mixxx library. See *edit metadata*.

  – **Import from MusicBrainz**: Look up *metadata* online by searching the *MusicBrainz* database and apply the search results to your tracks. See *edit metadata*.

  – **Export to File Tags:** Saves *metadata* to files. Mixxx may wait to modify files until they are not loaded to any decks or samplers. If you do not see changed metadata in other programs immediately, eject the track from all decks and samplers or shutdown Mixxx.

  – **Cover Art**

    * **Choose New Cover**: Select an image from the file browser as the cover.

    * **Clear Cover**: Delete any cover information saved for this track.

    * **Reload from track/folder**: Reload the cover from the tracks' ID3v2 *tags* or a picture in the track folder if the tags do not supply any.

- **Clear**

  – **BPM and Beatgrid**: Removes the *BPM* and *beatgrid* data from the selected tracks in the Mixxx library. After doing this, we recommend *analyzing* the tracks again.

  – **Play Count**: Marks selected tracks as not played in the current session and sets their play counter to zero. The icon in the *Played* column changes.

  – **Hotcues**: Clears all saved *hotcues* and *hotcue labels*.

  – **ReplayGain**: Clears all saved *ReplayGain* values.

  – **Waveform**: Clears the saved waveform data from the selected tracks. This is useful if a file is overwritten by another file of the same name, or was edited externally (e.g. in a waveform editor). To clear the waveform cache for all tracks in the library, select *Preferences ‣ Waveforms ‣ Clear cached Waveforms* .

  – **All**: Clears all of the data above from the Mixxx library database at once.

- **Change BPM**

  – Allows to change the *BPM* to 50%, 66%, 75%, 133,33%, 150%, or 200% of the BPM set by Mixxx when *analyzing* the tracks. If many of the detected BPM values are incorrect, you may try other settings in the *Analyzer Settings* and re-run the analysis.

  – **Lock/Unlock BPM**: Locks/Unlocks the *BPM* of selected tracks so you can't edit them in the track properties. The 🔓 icon next to the track's BPM in the library row is a toggle. Clicking it will set the status to "locked", and the icon changes to 🔒.

- **Update ReplayGain from Deck Gain**: Applies the deck pregain knob value to the detected ReplayGain value for the current track. This is a way to update the ReplayGain value of a track if it has been detected incorrectly. When this option is selected, the pregain value for the deck will be centered so that there is no audible difference in track volume, so this operation is safe to use during performance.

- **Hide from Library**

  Temporarily hides selected tracks from the track list. Hidden tracks are listed in the *Hidden Tracks* menu item which is explained below.

- **Open in File Browser**

  Brings up the selected files in your file manager.

- **Properties**

  Similar to inline editing explained above, the properties dialog allows you to view and edit metadata such as title, artist, album, and view the full file name and path. Note that you can not edit multiple files at once.

Note: Most of the context menu items are available in file lists of other views like Auto DJ, Playlists, and Crates as well.

4.2.2 Missing Tracks

The Missing Tracks view is accessible by expanding the Library tree item in the sidebar. Any tracks that were previously loaded into your library but were later not found on your drive will appear here. Mixxx does not automatically delete records of missing tracks so that extra metadata Mixxx might have (such as hot cues and beat grids) will not be lost in case the file is replaced.

The features in detail:

- **Select All button**: Selects all tracks in the current view.

- **Purge button**: Purges the selected tracks from the Mixxx library, but does not remove them from your computer. This will delete all *metadata* Mixxx has for a track.

4.2.3 Hidden Tracks

The Hidden Tracks view is accessible by expanding the Library tree item in the sidebar. Any tracks that were previously loaded into your library but were later set to be hidden from the library will appear here. Use the *Hide from Library* context menu item in the *tracks* view to temporarily hide selected tracks.

The features in detail:

- **Select All button**: Selects all tracks in the current view.

- **Purge Button**: Purges the selected tracks from the Mixxx library, but does not remove them from your computer. This will delete all *metadata* Mixxx has for a track.

- **Unhide Button**: Removes the selected tracks from the *Hidden Tracks* view and makes them available in the regular track lists again. The tracks will re-appear in every playlist or crate they were in before being hidden.

See also:

To learn how to permanently remove tracks from the Mixxx library using the *Hidden Tracks* view, see *permanently remove tracks*.

4.3 Loading Tracks

Tracks can be loaded into a deck in several ways:

- Right-click the *library track table*: Right-clicking on a track in the table will present the options *Load in Deck 1* and *Load in Deck 2*, among others. Making either selection will load a track into a deck.

- By *Using a Keyboard* to load the selected track in the library track table. Use keyboard ↑ and ↓ arrow button to select a track, Shift + ← to load into Deck 1 and Shift + → to load into Deck 2.

- Drag-and-drop from library track table: Dragging-and-dropping a track from the track table onto a waveform display will load the track into that deck.

- Drag-and-drop from deck to deck: Once you've loaded a track to deck, sampler, or preview deck, click on the *track title*, *track artist* or cover art and drag it to another deck or sampler. Note that you can also drop tracks onto Playlists and Crates in the sidebar, as well as into track tables of active Playlists or Crates.

- Drag-and-drop from external file browser: Dragging-and-dropping a track from an external file browser directly onto a waveform display in Mixxx will load that track. This function also works with some other applications. For example, on macOS, dragging-and-dropping a track from iTunes onto one of Mixxx's waveform displays will load it into that deck.

4.4 Finding Tracks (Search)

The search function filters the currently displayed list (e.g. a playlist, a crate, or even the whole library) for tracks that match your search query.

- Activate the search input field by clicking in it or pressing `CTRL` + `F` (Windows/Linux) or `CMD` + `F` (Mac).

- Type your search term(s). Mixxx filters the tracks as you type and shows only those matching the search term(s). Search terms can include an artist's name, a song title, BPM, etc.

- To clear the search string hit `ESC` or click the clear button right next to the input field.

- Hit `TAB` to cycle between the search and the list of results in the library. Use the ↑ and ↓ keys to scroll in the list of results.

Note: If the search input field has focus, the Mixxx keyboard shortcuts are disabled, see *Using a Keyboard*.

Note: The *Computer* and *Recording* views currently only support simple case-insensitive filtering.

4.4.1 Using search operators

Search operators allow you to form more complex search queries. They allow you to limit certain search terms to particular properties of your tracks.

Mixxx supports the following filters:

- **Text filtering**: album_artist, album, artist, comment, composer, crate, genre, grouping, location, title

  Examples

  ```
  artist: "com truise"
  album:Danger
  genre: Trance
  title: foo
  composer: foo
  comment: foo
  genre:hip-hop -genre:gangsta
  ```

Note: It doesn't matter if you have space between the colon and the argument or not. Quotes must be used for multi-word text arguments.

You can use **=** to find exact matches. It reveals only tracks where the entire property text equals the search term. As without **=**, you must use quotes for more than one word. The first of the examples below will find only tracks where the title is "wow" (case-insensitive like the default search), i.e. not "wowy", "oh wow!" or "wow (Hej Remix)".

Examples

```
title:=wow
title:= "Track 1"
artist:="DJ Flop"
```

- **Numeric filtering**: bitrate, bpm, played, rating, track, year

Examples

```
bpm:140
bpm: >140
year: <2010
bpm: >=140
rating: <=4
bpm: 140-150
played: >10
```

Note: You can put a space after the colon but currently there must be no space between the operator and the number.

- **Special filtering**: key, duration, added, dateadded, datetime_added, date_added

  - Supports fuzzy matching of key searches. The following example lists tracks with harmonically compatible keys to C# minor.

    ```
    ~key:c#m
    ```

    You can combine operators but there's no way to do an "OR" search right now. The following example lists all tracks by "Danger" over 3 minutes long that are rated 4 or 5.

    ```
    artist:Danger duration:>3m rating:>=4
    ```

  - Negative search filters. Use the - prefix as negation operator. The following example would find "hip-hop" from any year but 1990.

    ```
    genre:hip-hop -year:1990
    ```

  - Search for empty fields. The following example lists all tracks without a genre. It works for all text fields, including crates.

    ```
    genre:""
    ```

Examples

```
duration:2m10
duration:<2:10
duration:>1m35s
duration:>62
```

Note: You can put a space after the colon but currently there must be no space between the operator and the

---

number.

4.5 Previewing Tracks

To pre-listen to a track, activate the *Preview* column in a library view. Clicking the 🎧 ▶ icon in the library's *Preview* column loads the selected track into a special *Preview Deck* that will only output sound in the *headphones* channel. Click the 🎧 ⏸ icon to stop the playback.

Alternatively, select a track from the track list of the Mixxx library, drag the track to the waveform view of the *Preview Deck* and click the *Play* button next to the waveform.

To display the *Preview Deck*, press `CTRL + 4` (Windows/Linux) or `CMD + 4` (Mac).

Hint: Click on the *Preview* column header to randomly sort tracks.

4.6 Edit metadata of audio files

Mixxx reads relevant *metadata* from the tracks and displays them in the library columns. You are free to edit most metadata, and Mixxx offers a number of different ways to do so. Note that some information can not be edited, such as bitrate, size, length, type, filename, and location.

Note: Mixxx does not support editing the metadata of many tracks at a time (bulk editing).

Warning: Mixxx won't touch your audio files by default. Changes to a track's metadata will be saved to the Mixxx library, but **not** to the track itself.

If you wish to write modified track metadata from the library into file tags, check the box in *Preferences ▸ Library ▸ Track Metadata Synchronisation*.

4.6.1 Manual Edit

Track Inline editing:

To enable inline editing in the *library* go to *Preferences ▸ Library ▸ Miscellaneous* and check the box "Edit metadata after clicking selected track".

Select any track in the *library* and click on the field you want to edit. If the field is editable, it will become an editable text box. Enter a value and hit `Enter` when you are done.

Fig. 2: Mixxx library - Inline editing

Properties editor:

To open the editor right-click on a **single track** in the library or any track label in decks or samplers, then select

---

Properties in the track menu. You can also double-click any track label in the decks or samplers to open the editor directly.

Add or change values in the editable fields, and save your changes as explained below.
Fig. 3: Mixxx library - Properties editor

- **OK**: Accept the changes and close the editor.

- **Apply**: Accept the changes and leave the editor open.

- **Cancel**: Discard the changes and close the editor.

- **Previous/Next**: Load the previous or next track in the current library view.

- **Import Metadata from File**: Prompts Mixxx to re-read the metadata of the selected track (such as when you have modified it externally with another application.)

- **Import Metadata from MusicBrainz**: Look up metadata on-line by searching the *MusicBrainz* database. See below.

4.6.2 Using the MusicBrainz online database

MusicBrainz is an *open-source* music encyclopedia that collects music *metadata* and makes it available to the public.

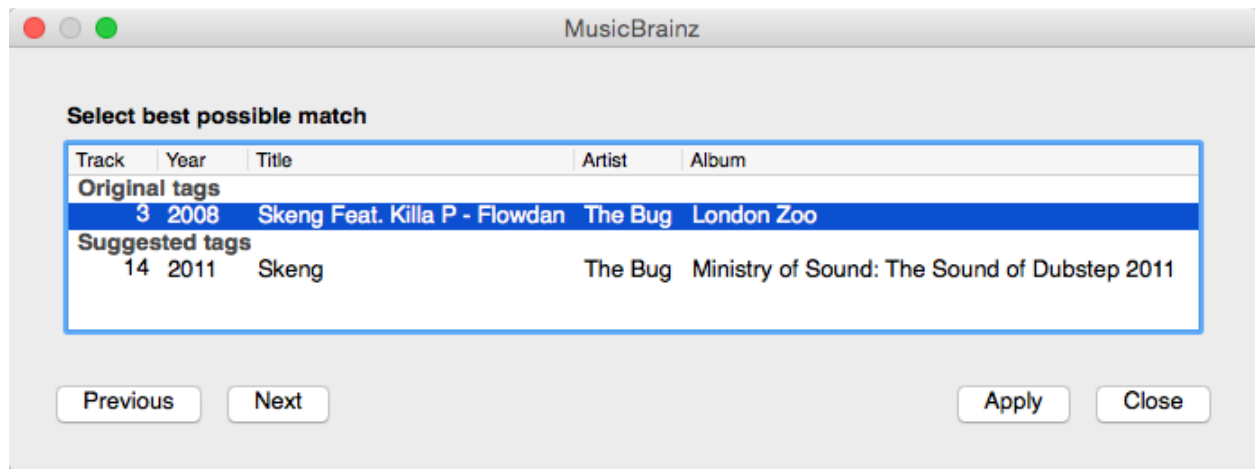

Fig. 4: Mixxx library - MusicBrainz Wizard

The MusicBrainz wizard in Mixxx allows searching the MusicBrainz database and applying the results to your tracks.

Click on a **single track** in the library and select *Get Metadata from MusicBrainz*. Mixxx fetches track data from the MusicBrainz database and displays the search results.

Select the best match from the search results by clicking on it in the list.

- **Apply**: Apply the selected MusicBrainz metadata to the track.

- **Close**: Close the wizard.

- **Previous/Next**: Load the previous or next track in the current library view and perform a MusicBrainz lookup on it as well.

Fetching track metadata from MusicBrainz can fail:

- if Mixxx is unable to find the specified track in the MusicBrainz database,

- if Mixxx cannot reach the MusicBrainz servers (if they are down),

- or if you are not connected to the Internet.

Hint: The MusicBrainz service has been designed for identifying full audio files. If a track is less than 2 minutes long, identifying the file will likely fail. Identifying a layered mix-track or mash-up may produce false positives in the result list.

...

4.6.3 Using third-party software

If you have edited file metadata in third-party software you need to re-import the modified metadata into Mixxx manually by selecting the affected tracks, open the context menu, and then choose *Metadata ‣ Import From File Tags*.

Hint: Rescanning the library with *Library ‣ Rescan Library* in the menu on top of the application window will only detect newly added or removed tracks but no modifications of existing tracks. This is a known limitation.

Popular software to edit metadata of audio files include:

- Mp3tag (Windows)
- Kid3 (Mac, Windows, Linux)
- Picard (Mac, Windows, Linux)

4.7 Auto DJ - Automate your mix

The Auto DJ queue is a special playlist that contains extra controls for automatic mixing. This is useful when taking a break from live mixing or for using Mixxx as media player.

The Auto DJ features in detail:

- **Shuffle button**: Randomizes the order of tracks in the Auto DJ playlist.
- **Add Random button**: Adds a random track from track sources (crates) to the Auto DJ queue. If no track sources are configured, the track is added from the library instead.
- **Skip track button**: Skips the next track in the Auto DJ playlist.
- **Fade now button**: Triggers the transition to the next track.
- **Transition time spin-box**: Determines the duration of the transition. A negative value will add a pause between tracks.
- **Selection Info label**: Displays the duration and number of selected tracks. Press `Ctrl + A` to get the total duration of the AutoDJ queue.
- **Enable Auto DJ button**: Toggles the Auto DJ mode on or off.

The *Skip track*, *Add Random* and *Fade now* buttons are only accessible if the Auto DJ mode is enabled. The Search field in the upper left corner is disabled in Auto DJ. By default, Auto DJ removes tracks after playing them but if you want it to play the same tracks over and over again, you can activate the *Auto DJ Requeue* option in *Preferences ‣ Auto DJ ‣ Re-queue tracks after playback*.

Auto DJ Crates

It is possible to add random tracks to the bottom of the Auto DJ playlist. The tracks are chosen from a set of crates that you have set as a source for Auto DJ, or from the standard library. Mixxx will normally try to select tracks that haven't yet been played. You can set a minimum number of tracks that are always available for selection no matter when they were last played in *Preferences ‣ Auto DJ ‣ Minimum available tracks in Track Source*.

See also:

For more information, go to the chapter *Auto DJ*.

4.8 Playlists - Arranging tracks in a set order

Playlists are ordered lists of tracks that allow you to plan your DJ sets. Some DJs construct playlists before they perform live; others prefer to build them on-the-fly.

Playlists are not directly loadable into decks as Mixxx is primarily intended for live, attended performance use. However, you can right-click a playlist to queue it to *Auto DJ*, so in a sense you can "play" it.

- **Create a playlist**: Right-click on the *Playlists* sidebar item and select *Create New Playlist*. Name the playlist and click *OK*. The total number of tracks and total duration are displayed next to the name.

- **Import playlists**: Right-click on the *Playlists* sidebar item and select *Import Playlist*. Select one or more playlists and click *OK*. Mixxx creates an import of these existing external playlists as new Mixxx playlists.

- **Add Tracks**: Add tracks to a previously created playlist by dragging-and-dropping a selection of tracks from the library or playlists onto the name of a playlist in the sidebar. Alternatively, use the right-click context menu in the library's *track list*.

Hint: If you have a track selected in the library, all of the visible playlist and crates that it is in are shown in bold.

Right-click on an existing playlist name to access the different features in the context menu:

- **Add to Auto DJ**: Adds the content of the playlist to the *Auto DJ* queue for automatic mixing.

- **Rename**: To rename a playlist, just enter a new playlist name and click *OK*.

- **Duplicate**: Sometimes you want to build a playlist based on an existing one. Select the playlist you would like to duplicate, choose *Duplicate Playlist*, name the new playlist and click *OK*.

- **Remove**: Removes an unlocked playlist. Tracks that were in the playlist remain in the library for later use.

- **Lock**: This icon indicates a locked playlist. If a playlist is locked, you cannot add tracks, rename or delete the playlist. Choose *Unlock* from the context menu to unlock the playlist.

- **Analyze entire playlist**: Forces the analysis of the tracks in the playlist in the *Analyze* view.

- **Import playlist**: Import tracks from external playlists in various file formats to the selected playlist. For more information, go to *Using libraries from other software*.

- **Export playlist**: Export a playlist to various file formats such as `m3u`, `m3u8`, `pls`, `txt`, or `csv`. This allows you to use the data in other applications.

- **Export Track files**: This copies all of the tracks in a playlist into a folder such as an external USB stick. Only files are copied, not Mixxx-specific metadata like waveforms or cover art that is not embedded in the file.

4.9 Crates - Organizing tracks into collections

Crates are unordered collections of tracks, just like DJ cases holding your favorite records.

- **Create a crate**: Right-click on the *Crates* sidebar item and select *Create New Crate*. Name the crate and click *OK*. The total number of tracks and total duration are displayed next to the name.

- **Import crates**: Right-click on the *Crates* sidebar item and select *Import Crate*. Select one or more playlists and click *OK*. Mixxx creates an import of these existing external playlists as new Mixxx crates.

- **Add Tracks**: Add tracks to a previously created crate by dragging-and-dropping a selection of tracks from the library or playlists onto the name of a crate in the sidebar. Alternatively use the context menu in the library's *track list*.

Right-click on an existing crate's name to access the different features in the context menu:

- **Rename**: To rename a crate, enter the new crate name and click *OK*.
- **Duplicate**: Just like playlists you can duplicate an existing crate. Select the crate you would like to duplicate, choose *Duplicate Crate*, name the new crate and click *OK*.
- **Remove**: Removes an unlocked crate. Tracks in the crate are still available in the library for later use.
- **Lock**: ![lock icon] This icon indicates a locked crate. If a crate is locked, you cannot add tracks, rename or delete the crate. Choose *Unlock* from the context menu to unlock the crate.
- **Auto DJ Track Source**: Use this crate as a source for random tracks in Auto DJ, see *Auto DJ crates* .
- **Analyze entire crate**: Forces the analysis of the crate in the *Analyze* view.
- **Import crate**: Import tracks from external playlists in various file formats to the selected crate.
- **Export crate**: Export a crate to various file formats, such as m3u, m3u8, pls, txt, or csv. This allows you to use the data in other applications.
- **Export Track files**: This copies all of the tracks in a crate into a folder such as an external USB stick. Only files are copied, not Mixxx-specific metadata like waveforms or cover art that is not embedded in the file.

4.9.1 Crates vs. Playlists

Crates are unordered collections of tracks. Unlike playlists, they cannot contain duplicate entries and do not support arranging tracks within them.

Often DJs group tracks by genre, keep lists of favorite tracks, and/or prepare lists of tracks they want to play at a particular party. In these cases they rarely care about the order since they will choose it at the party based on the dance floor and mood. They certainly don't want duplicates in these lists. Crates serve these purposes. You can think of them like labels in GMail or Web 2.0 tags for your music.

If however you want to plan out a specific set and practice the transitions, you will want an ordered list of tracks. Playlists serve this purpose.

4.10 Computer - Loading tracks from anywhere on your computer

![computer icon] This mode works like a file manager and allows you to load tracks from anywhere on your computer and connected devices, that are not necessarily already in your Mixxx library.

Click the *Computer* sidebar item to navigate the computer and find your music. Depending on your *operating system*, your music will usually be found in the "My Music" or "Music" folder. Drag the files you want to import to the ![tracks icon] *Tracks* icon or directly to the *Waveform Displays*.

Note: Currently you can only drag files (not folders) to the Mixxx library.

Right-click on a folder and choose *Add to Library* to add the folder as an additional music directory. Mixxx will watch this directory and its subdirectories for new tracks.

See also:

For more information, go to *Changing music directories*.

4.10.1 Quick Links - Bookmark your favorite folders

Using the *Quick Links* sub-menu you can bookmark folders for direct access. Click the *Computer* sidebar item and navigate to the folder you would like to bookmark. Right-click and choose *Add to Quick Links*. The folder is now pinned below the *Quick Links*. To un-pin that folder, right-click and choose *Remove from Quick Links*.

4.11 Recordings

In this section of the library you can start and stop recording your session as well as view previous recordings and the dates they were made.

See also:

For more information, go to *Recording Your Mix*.

4.12 History - Keep track of your sessions

The history section automatically keeps a list of tracks you play in your DJ sets. This is handy for remembering what worked in your DJ sets, posting set-lists, or reporting your plays to licensing organizations. Every time you start Mixxx, a new history section is created. If you don't play any tracks during the session, it will be discarded.

This icon indicates the current session.

Click on the *History* icon in the sidebar to switch to the *History* view, then right-click on a session's name/date to access the different features:

- **Add to Auto DJ**: Adds the content of the session to the *Auto DJ* queue for automatic mixing.
- **Rename**: Rename a session. The default is the calendar date (YYYY-MM-DD).
- **Remove**: Remove a previous (unlocked) session. (You cannot remove the current session.)
- **Lock**: Protect a previous session against accidental merge or deletion. An lock icon indicates a locked session.
- **Create new history playlist**: Split off the current history session and add a new session without having to restart Mixxx. The current history must contain at least one track for this option to be available.
- **Join with previous**: Append the selected history session to the end of the previous one.
- **Export playlist**: Export a session in various file formats. This allows you to use the data in other applications.

4.13 Analyze - Prepare your tracks

This section allows you to analyze your tracks in advance of loading them into a deck. Analyzing tracks requires considerable CPU power and may cause skips in the audio while performing, so it helps to have your tracks analyzed before you play. See *Analyze your library* for details.

4.14 Using libraries from other software

Supported libraries:

- iTunes (Windows, macOS)

- Traktor (Windows, macOS)

- Rhythmbox (GNU/Linux)

- Banshee (Windows, macOS, GNU/Linux)

- Serato (Windows, macOS)

- Rekordbox (Windows, macOS)

The external library views allow you to use music libraries you have created in these third-party applications. You can access music as well as playlists. If available, Mixxx automatically loads the external libraries from their default locations on your hard drive.

Note: Playing a track from an external library will add it to your Mixxx library.

See also:

External libraries can be disabled under *Preferences ‣ Library*.

4.14.1 Using the iTunes/Traktor/Rhythmbox/Bashee/Rekordbox library

Right-click on the iTunes icon in the Library tree and select *Choose Library* to load the `iTunes Music Library. xml` from a different location. Select *Use Default Library* to reset.

- Right-click on a iTunes/Traktor/Rhythmbox/Banshee playlist and choose *Import Playlist* to import it into a new Mixxx playlist.

- If you have an iTunes configuration file (`*.xml`) from a Windows or Mac partition mounted in Linux, you can load it and use your iTunes tracks and playlists as well.

4.14.2 Using the Rekordbox library

To read Rekordbox databases for CDJ/XDJ players on USB or SD devices, the database has to be exported to a USB or SD device with a FAT or HFS file system using the Rekordbox Export mode. Databases that have been moved to an external device via *Preferences* > *Advanced* > *Database management* in Rekordbox are not supported.

1. Plug your USB or SD drive in while Mixxx is running.

2. Click on the *Rekordbox* item in the library sidebar to scan for Rekordbox prepared USB drives. If no Rekordbox devices show up, you can click on *Check for attached Rekordbox devices (refresh)*.

3. Click on the desired removable device. All your folders and playlists will be revealed for you to play from.

How Rekordbox hotcues, memory cues, and loops are imported

The following data is read:

- Folders

- Playlists

- Beatgrids

- Hot cues

- Memory cues

- Loops

Mixxx currently has one main cue point, one loop, and thirty eight hotcues. As such:

- All Rekordbox hotcues are mapped to Mixxx hotcues as expected, the first chronological Rekordbox memory cue is mapped to the Mixxx main cue.

- The first chronological Rekordbox loop is also mapped to the Mixxx loop.

- All loops (including the first loop), and all subsequent Rekordbox memory cues are appended as Mixxx hotcues following the previously imported Rekordbox hotcues.

- The hotcue and memory cue colors you assigned in Rekordbox are also imported, assisting in distinguishing between them.

Although additional imported Rekordbox loops only appear in Mixxx 2.3 as hotcues, their loop information is stored in the Mixxx library and will become usable in Mixxx 2.4.

4.14.3 Using the Serato library

Mixxx supports reading your Serato library and crates both from your local hard drive as well as portable USB drives. Smart crates are currently not supported.

Serato stores information such as hot cues, saved loops, track color and beatgrid in the file tags. Regardless of whether a track is loaded into deck from the library or directly from the file browser, Mixxx will import that information automatically if present.

Waveforms, Gain values and "Flips" are not imported from Serato.

Note: Due to differences in the metadata format, importing Serato information from Ogg Vorbis files is currently not supported.

To import Serato libraries from external USB drives:

---

1. Copy music library from Serato into external USB drive

2. Plug in USB drive while Mixxx is running

3. Click on *Serato* in the library. All USB drives containing a Serato library will be detected automatically.

4. For each removable device, the library and all crates from Serato will accessible.

If you have already added a track containing Serato Metadata to your Mixxx library in a Mixxx version that didn't support reading that data, you can reimport it from the file's tags via the track context menu.

> **Warning:** This action will clear your existing cuepoints in Mixxx if the file contains Serato Metadata

To reimport metadata from files:

- Right click on the track to show the context menu

- Select *Metadata* ‣ *Import From File Tags*.

Hint: Decoders may slightly detect different track start and end times for files from different sources, this could possibly be because of the presence of countless encoders and decoders for MP3 and M4A/AAC. This problem may cause your cues to be shifted up by a few milliseconds. Mixxx might not always be able to mitigate this problem, but it's possible to shift all cues for a track at once as a workaround.

4.15 Removing tracks from the library

Removing tracks from the Mixxx library will **not** physically delete them from your drive. However it does delete extra metadata Mixxx might have (such as hotcues and the beatgrids), and removes links to playlists or crates.

1. Click the *Library* item in the sidebar.

2. Find and select the tracks you want to remove, perform a right-click on them and select *Hide from Library* from the context menu.

3. Expand the *Library* item in the sidebar and click on the *Hidden tracks* sub-item. All tracks that were set to be hidden from the library will appear here.

4. Select the tracks you want to remove, or use the *Select All* button.

5. To confirm you want to permanently remove these tracks from the library, click *Purge*.

Hint: If you want to hide or purge only tracks from a specific folder you may use the `location:` *search operator*, or *sort the table* by "Location".

Hint: If you later decide to add some of the deleted tracks back, import them to the Mixxx library again, see *Changing music directories*.

4.16 Compatible file formats

Mixxx supports a variety of audio file formats:

Lossless	Lossy
FLAC (flac)	*MP3* (mp3)
Wave (wav)	*Ogg Vorbis* (ogg)
Aiff (aiff, aif)	*AAC* (aac, m4a, mp4)
	Opus (opus)

Lossless formats preserve every detail of the original recording and are recommended for the best sound quality. The FLAC format compresses the files to take less space on your computer without sacrificing audio quality. WAV and AIFF files are uncompressed and take up much more space.

Lossy formats take up less storage space on your computer than lossless formats at the expense of reducing sound quality. Assuming an average track length of about 4 minutes, a 1 TB hard drive or solid state drive can store about 42000 FLAC files or about 115000 MP3 files at 320 kbps.

There is no benefit to converting lossy file to lossless formats. The detail lost when making the lossy file cannot be recovered.

AAC (M4A) is supported on Windows Vista and macOS 10.8 onwards. The Platform Update Supplement is required for Windows Vista.

On Linux, AAC playback is disabled by default due to licensing restrictions. To enable the playback of AAC files, build Mixxx from source with m4a/AAC files support.

> **Warning:** *DRM* protected files, such as m4p files purchased in the iTunes Store in 2009 or earlier, are not supported.

> **Warning:** *ALAC* files use the same container MP4 container format and file extensions (m4a, mp4) as AAC files, but Mixxx cannot play ALAC files. It is recommended to convert ALAC files to FLAC for use in Mixxx. This will not reduce the sound quality of the files.

4.17 Music from audio CDs

Mixxx can not play music directly from audio CDs. Use a CD ripping program to copy the audio from the CD to files on your computer. It is recommended to save the ripped files in the *FLAC* format. Many different programs are available to rip CDs, but not every program is capable of saving them to FLAC.

DJ HARDWARE

Although Mixxx can be used with just a laptop or desktop computer, fully taking advantage of Mixxx's features requires specialized DJ hardware. Depending on your budget and application area, your setup and requirements may vary. This chapter provides general background information about various types of DJ hardware.

To make DJing with Mixxx a fun experience, at least the following pieces are needed:

- speakers to play the music to the audience,

- an *audio interface* with 4 mono/2 stereo output channels (or 2 mono output channels + a *DJ splitter cable*),

- *headphones* for prelistening tracks while another track is playing on the speakers, and

- audio cables and adapters to connect the equipment to your computer.

Additionally, you might consider getting the following equiment:

- a *controller*,

- *turntables*, an audio interface with phono inputs and *timecode vinyl*,

- a laptop/controller stand,

- a surge protector to protect the equipment from voltage spikes,

- cases for laptop, controller and headphones, and

- custom fader and knob caps to customize your gear.

See also:

Instructions how to use DJ Controllers that work out-of-the-box with Mixxx can be found in the *Hardware Manuals* section of this manual. The Mixxx DJ Hardware Guide on the Mixxx Wiki also lists additional devices, including information about their prices, features, and compatibility with Mixxx.

5.1 Controllers

DJ controllers are devices with knobs, faders, buttons, and jog wheels to control DJ software such as Mixxx. Controllers allow quick access to different controls while providing tactile and visual feedback indicating the state of each control, such as the position of a knob or whether a switch is on or off. This allows you to focus on manipulating the music without needing to look at your computer screen all the time. Controllers also allow using two hands to manipulate two different controls at the same time, which is required for many mixing techniques.

DJ controllers typically do not do any actual audio processing. Instead, they send signals (typically *MIDI* or *HID* over a USB cable) to the computer to instruct DJ software how to manipulate the audio. Many DJ controllers include an *audio interface* with 2 separate stereo outputs built into the device. This allows the DJ to transport and setup only one piece of hardware in addition to a laptop. Some devices can be used as both a controller and *hardware mixer*.

Mixxx can work with any *MIDI* or *HID controller* as long as there is a mapping file to tell Mixxx how to understand the controller's signals. Mixxx comes bundled with a number of MIDI and HID mappings, which are listed in the *Hardware Manuals* section. For controllers that Mixxx does not yet support, you can search the forum to see if anyone has started a mapping. You can also start one yourself using the information in the Controller Mapping Documentation on the wiki.

See also:

Using MIDI/HID Controllers describes how to configure Mixxx to use controllers.

5.2 Audio Interfaces

An audio interface (also known as a "sound card", although few of them are shaped like cards anymore) is a device that allows a computer to send output to and receive input from audio equipment. Whether using *internal or external mixing*, it is recommended to use a single audio interface with at least 4 independent output channels (2 separate stereo pairs).

The headphone jack on most laptops is not a second audio output. Rather, plugging headphones into the jack simply redirects the laptop's single stereo output from its speakers to your headphones. A *splitter cable* can be used to separate the stereo output of a headphone jack into two separate mono outputs for headphone cueing, but it is recommended to use a sound card with at least four mono outputs (for two stereo pairs). Such sound cards tend to be higher quality than those built into laptops and allow your mix to be enjoyed in stereo by your audience.

Unlike some proprietary DJ systems, Mixxx can use any audio interface and any *MIDI* or *HID* controller that your *OS* has drivers to use. If your controller has an integrated audio interface, you may choose to use a different audio interface for higher quality audio. Mixxx can also use multiple audio interfaces simultaneously.

5.2.1 Audio Interface Considerations

This section provides background information to help you choose an audio interface to use with Mixxx.

Bit Depth and Sample Rate

Most music is published with a bit depth of 16 bits at a sample rate of 44.1 kHz because this is all that is needed to store all the detail of music in digital form.

Bit depth determines the possible dynamic range of the signal. 16 bits is more than enough for playing back music. While 24 bits is helpful for recording, it is useless for playback.

Half the sample rate determines the maximum frequency that can be represented by the signal. Humans generally can't hear frequencies above 20 kHz, so a sampling rate of 44.1 kHz, representing a maximum frequency of 22.05 kHz, is fine for playback. Higher sample rates like 88.2 kHz and 96 kHz can be helpful to reduce aliasing distortion when recording, but have no benefit for playback and make your computer work harder.

For a more thorough and technical explanation of why 16 bits at 44.1 kHz is all that is needed for playback, read 24/192 Music Downloads Are Very Silly Indeed.

Specifications

When considering specifications, higher dynamic range, higher signal-to-noise ratio (SNR), higher maximum output level, lower THD+N (Total Harmonic Distortion + Noise; look for a more negative dB value or smaller percentage), and lower crosstalk (more negative dB value) are better. Cheap audio interfaces tend to not have these specifications published.

Connector and Cable Types

If you are unfamiliar with professional audio equipment, read Digital DJ Tips' Essential Guide to Audio Cables for DJs to understand the different kinds of connectors on audio interfaces. It is better to use an audio interface with balanced outputs, especially if you will run long cables directly into an amplifier or active speakers without going through a *hardware mixer*. Balanced signals reject interference and are less susceptible to ground loop hum issues (which can be a problem when plugging unbalanced gear into separate power sources).

However, most venues have DJs plug into *hardware DJ mixers*, which typically only have RCA inputs (RCA cables cannot be balanced). Most home/computer speakers and amplifiers have RCA and/or 1/8" TRS stereo inputs. Most live sound mixers have balanced 1/4" TRS mono inputs. If you need to interconnect balanced and unbalanced gear, refer to this guide from Presonus (deleted, via archive.org) and this guide from Rane (deleted, via archive.org).

Number of Channels

Audio interfaces sometimes have multiple connectors for a single channel, resulting in more connectors than channels. So, not every connector can send or receive and independent signal. For example, some audio interfaces made for DJing have 4 output channels with 4 mono output connectors and 1 stereo headphone connector. This does not mean that the audio interface can send out 6 different signals at the same time; rather, the signal on 2 of the mono outputs and the stereo headphone output would be the same. Also, many controllers have separate main and booth outputs with independent volume controls, but they both play the same signal.

Vinyl Control and Phono Preamplifiers

Turntables output low voltage (phono level) signals that need to be amplified to line level before most audio equipment can work with them. So, if you want to use *Vinyl Control*, sometimes referred to as a Digital Vinyl System (DVS), it is best to have phono preamplifiers (one for each deck) somewhere between your turntable and sound card to boost the turntable's phono level signal to line level. Mixxx can amplify phono level signals in software, but it is better to do it in hardware. The phono preamp can be in the turntable, in the audio interface, or a stand alone device. Most audio interfaces do not have phono preamps; these are generally found on audio interfaces specifically made for controlling DJ software with timecode vinyl. *Mixers* with audio interfaces have phono preamps on their deck inputs, but not necessarily on every deck input. Many higher-end all-in-one controllers also include audio interfaces with phono preamps.

Driver Support

Unlike some proprietary DJ programs, Mixxx works with any audio interface that is compatible with your operating system — including for timecode vinyl (DVS) use.

USB Audio Class compliant audio interfaces should work out of the box on all operating systems supported by Mixxx. This is the case for the integrated audio interfaces in most DJ controllers. Sound cards that aren't USB Audio Class compliant need a driver for each OS.

Note: On Windows, you should install the manufacturer's drivers even for USB class compliant audio interfaces to be able to use the recommended ASIO sound API.

Hint: If you are considering buying a controller or audio interface, the easiest way to tell if it is USB class compliant before you buy it is to search for macOS drivers for the device on the manufacturer's website. If it is advertised as compatible with macOS or iOS but there are no drivers to download for macOS, the device is USB class compliant.

5.3 Mixers

Mixers are devices that combine audio signals. DJ mixers are different from live and studio mixers because they have multiple stereo channels with phono preamplifiers for connecting *Turntables*. It is conventional to use a DJ mixer with *Vinyl Control*, but vinyl control can be used without a hardware mixer.

Using Mixxx with a DJ mixer requires an audio interface with at least 4 mono outputs (2 stereo pairs) to send Mixxx's decks to the mixer's stereo channels. Some DJ mixers have a USB *audio interface* built into them. This lets Mixxx send unmixed audio files directly to the mixer without needing a separate stand-alone audio interface.

Often DJs who use DJ software with internal mixing send their *main output* to a hardware mixer. This can be helpful to send the mixed signal to both a main speaker output for the audience and booth speakers for the DJ with separate gain controls for each output. It also facilitates smooth transitions between DJs.

However, using an external mixer with internal mixing is not necessary and reduces the sound quality. Each piece of equipment an audio signal passes through reduces the sound quality, so avoiding unnecessary equipment in the signal path can provide better sound quality. Many DJ controllers provide separate main and booth outputs with independent volume controls. Alternatively, a sound card with at least 6 output channels can be used with Mixxx's *Booth* output.

Many people confuse "analog mixers" and "hardware mixers", but these are not the same. Many hardware mixers process audio digitally with specialized signal processors as opposed to a general purpose CPU like those in laptop and desktop computers.

See also:

Recording And Broadcasting With An External Hardware Mixer

5.4 Turntables

Turntables are mechanical devices that play music recordings cut into vinyl phonograph records. Before software like Mixxx was available, the art of DJing originated with turntables and *DJ mixers*. Special vinyl records can be used with turntables to control the playback of digital files in Mixxx as if the digital file was pressed onto the vinyl record.

See also:

Vinyl Control

5.5 CDJs

CDJs are devices that play digital audio files and have controls from manipulating the playback of the audio. Originally CDJs played audio CDs, but new devices typically use USB storage drives or SD cards. Some CDJs can be plugged into a computer with a USB cable to function as a *controller* for Mixxx.

5.6 Microphones

Microphones convert changes in sound pressure in air to changes in voltage (an analog audio signal). Mixxx can work with any microphone that can be plugged into your *audio interface*.

See also:

Using Microphones

5.7 Headphones

Being able to listen to what you will play next in headphones before your audience hears on the main speakers or your broadcast stream is an essential part of DJing. DJ headphones are generally better quality than typical consumer head-phones. Importantly, they are designed to have good isolation, meaning they block outside sound. This allows the DJ to focus on the sound in the headphones better without having to turn up the volume to drown out sound from the moni-tors, PA system, and chatter. Also, DJ headphones have hinges or flexible headbands that allow the DJ to take off one headphone cup to hear the monitor or PA output better in one ear and compare it to the headphone output in the other ear.

When shopping for headphones, consider how well they isolate sound and their durability. The most frequent places that headphones break are the cable attachment point and the headband. Look for headphones with detachable cables, metal headbands, and other individually replaceable parts. Avoid Bluetooth headphones because these may be unreliable and will always reduce sound quality. Active noise canceling headphones also tend to have worse sound quality than other headphones of a comparable price. DJ headphones with a closed design block out a lot of sound simply by being closed.

Whether to get on-ear or over-ear headphones is a matter of personal preference. Everyone's head is different, so head-phones that are comfortable for a friend or a reviewer may not be comfortable for you.

In-ear monitors (IEMs) isolate sound better than headphones but are more expensive. They usually cost more than double the price of good DJ headphones with comparable quality. They may be a sound investment for musicians who play often in very loud environments to preserve their hearing.

5.8 Splitter Cables

DJ splitter cables are the cheapest way to get two separate sound outputs from your computer. These plug into the onboard audio interface built into computer motherboards and split the stereo signal into two separate mono signals. However, onboard audio interfaces are not good quality, and you lose the stereo effect of hearing different sounds arranged in space.

Devices marketed as "headphone splitter" instead of DJ splitters duplicate one stereo signal in two jacks. These cannot be used for headphone cueing. Also, generic stereo-to-mono splitter cables or adapters typically have two mono jack outputs. Plugging headphones or stereo speakers into a generic stereo-to-mono splitter will only play sound on one side of the headphones or speakers.

EXAMPLE SETUPS

This chapter presents some example hardware setups with instructions for how to configure Mixxx to work with them.

See also:

- *DJ Hardware*: background information about different types of equipment.

- *Configuring sound input and output*: details about each available input and output option.

- *Using Microphones*: details for configuring Mixxx to work with microphones.

- DJ Hardware Guide lists specific devices with information about their prices, features, and compatibility with Mixxx.

6.1 Computer Only

The built-in audio interface on most computers comes with a single stereo line-out and a microphone input. This can be set up with Mixxx in two ways:

6.1.1 Practicing Mixing / Broadcasting

This setup can be used with a single audio output for speakers or headphones to practice DJing without investing in any equipment other than a computer and a set of speakers or headphones. With this configuration, use the *Pre/Main Knob* to switch back and forth between the main mix and *PFL* signal. This setup cannot be used to play for a live audience because the main mix is not sent to an audio interface output. However, it can be used by radio DJs who only need to send the main mix to a broadcast audience.

1. Open *Preferences ▸ Sound Hardware*

2. Select the *Output* tab

3. From the *Headphones* drop-down menu, select your built-in audio interface, then *Channels 1-2*. Although this is labeled *Headphones*, you can also plug speakers into the output jack of your computer.

4. Depending on your audio interface, you can specify a *microphone*

    a. Use your built-in microphone or connect a microphone to your computer

    b. Check that your microphone is detected by your *OS*

    c. Open the *Input* tab

    d. From the *Microphone* drop-down menu, select the input your microphone is connected to

5. Click *Apply* to save the changes.

6.1.2 Playing for an Audience

This setup allows for playing to an audience without headphone *cueing*.

Fig. 1: Using Mixxx with your built-in sound card

1. Open *Preferences* ▸ *Sound Hardware*

2. Select the *Output* tab

3. From the *Main* drop-down menu, select your built-in audio interface, then *Channels 1-2*

4. Depending on your audio interface, you can specify a *microphone*

   a. Use your built-in microphone or connect a microphone to your computer

   b. Check that your microphone is detected by your *OS*

   c. Open the *Input* tab

   d. From the *Microphone* drop-down menu, select the input your microphone is connected to

5. Click *Apply* to save the changes.

6.2 Laptop and Splitter Cable

The cheapest way to DJ and *cue* with headphones uses a stereo-to-mono DJ splitter cable (also known as a "Y cable") plugged into the headphone jack of a laptop or other computer. This cable divides the stereo output from a single jack into two separate mono signals.

This setup allows you to start DJing without having to invest in expensive equipment. However, because the signals are in mono, you and your audience will not be able to enjoy music producers' positioning of sound in space (although many club PA systems are wired in mono anyway). Furthermore, audio interfaces built into computers are usually low quality and often pick up interference from other components of the computer.

Using a built-in audio interface and a stereo-to-mono splitter

1. Open *Preferences* ▸ *Sound Hardware*

2. Select the *Output* tab

3. Check that your headphones are plugged into the side of the cable with a headphones symbol and that the speakers are plugged into the side of the cable with a speaker symbol.

4. From the *Main* drop-down menu, select your built-in audio interface, then *Channel 1*

5. From the *Headphones* drop-down menu, select your built-in audio interface, then *Channel 2*

6. Click *Apply* to save the changes.

Warning: Most splitter cables, particularly those marketed as headphone splitter cables, output the same stereo signal to two headphone jacks and will not work for this DJ setup. Also, if you use a generic stereo-to-mono splitter adapter, you may only be able to hear out of one side of your speakers and headphones. DJ splitter cables allow you to hear the same mono signal on both sides of your headphones and speakers.

## 6.3 Laptop and External USB Audio Interface

Fig. 2: Using Mixxx together with an external audio interface

Using two audio interfaces (built-in + external)

1. Open *Preferences ▸ Sound Hardware*

2. Select the *Output* tab

3. From the *Main* drop-down menu, select the external audio interface, then *Channels 1-2*

4. From the *Headphones* drop-down menu, select the built-in audio interface, then *Channels 1-2*

Using an external multi-channel audio interface

1. Open *Preferences ▸ Sound Hardware*

2. Select the *Output* tab

3. From the *Main* drop-down menu, select the external audio interface, then *Channels 1-2*

4. From the *Headphones* drop-down menu, select the external audio interface, then *Channels 3-4*

5. Click *Apply* to save the changes.

6.4 Laptop and MIDI or HID Controller

See also:

The *Controllers* section of the *DJ Hardware* chapter has background information about controllers.

6.4.1 Controllers with an integrated audio interface

Many DJ controllers include an integrated *multi-channel* audio interface. A setup with this kind of controller may look like the diagram below:

Fig. 3: Using Mixxx together with a DJ controller and integrated audio interface

Using a controller with an integrated multi-channel audio interface

1. Open *Preferences ▸ Sound Hardware*

2. Select the *Output* tab

3. From the *Main* drop-down menu, select your controller's audio interface, then *Channels 1-2*

4. From the *Headphones* drop-down menu, select your controller's audio interface, then *Channels 3-4*

5. Click *Apply* to save the changes.

6.4.2 Controllers without an integrated audio interface

Controllers without an integrated audio interface can be used together with a USB audio interface as depicted in the diagram below:

Using a controller without an integrated audio interface

1. Open *Preferences ▸ Sound Hardware*

2. Select the *Output* tab

3. From the *Main* drop-down menu, select the external audio interface, then *Channels 1-2*

Fig. 4: Using Mixxx together with a DJ controller and external audio interface

4. From the *Headphones* drop-down menu, select the built-in audio interface, then *Channels 1-2*

5. Click *Apply* to save the changes.

6.5 Laptop, External Hardware Mixer and Vinyl Control

This setup allows DJs to use the techniques of DJing with vinyl record turntables combined with the portability and flexibility of a laptop computer. Instead of carrying crates of records or CDs, DJs can carry their entire music collection on their laptop. In addition to a laptop and headphones, this setup requires an audio interface with at least two pairs of stereo inputs and outputs as well as a pair of *timecode* records.

See also:

Go to the chapter *Vinyl Control* for detailed information.

Fig. 5: Using Mixxx together with turntables and external mixer

CONTROLLING MIXXX

Mixxx can be controlled with a keyboard, a mouse, *MIDI*/*HID* controllers, time-code records/CDs, or a combination of these. The choice usually depends on your budget or style of DJing.

7.1 Using a Mouse and Touchpad

Use your mouse to interact with the controls in the *Mixxx User Interface* on your computer screen. You can perform actions by pointing and clicking with your mouse.

- **Single Left Click**: Performing a left mouse click on buttons triggers the default action for that control. Moreover if you click on a value in the track list of the Mixxx *library*, you can change the value. For example the year of a track.

- **Double Left Click**: Double-click on any knob or fader to reset it to its default value. This is especially useful on touchscreens as executing a right-click on them is usually tedious.

- **Single Right Click**: On most buttons, performing a right click triggers a different action than a left click. You can return any knob or fader to its default value by right-clicking that control.

- **Mouse Drag**: Click on a knob or fader, hold the left mouse button and move your cursor to change the value of the control. Use mouse drag to drop tracks from the file list to the decks, crates, playlists, etc.

- **Mouse Wheel**: Just like Mouse Drag, you can change knob and fader values by placing the cursor over the control and moving the mouse wheel.

Hint: If you hover with the mouse over a control (e.g. the crossfader) in the Mixxx user interface, the tooltip lists the left- and right-click action respectively.

Hint: On a Macbook or a computer with a touchpad that lacks mouse buttons, a two-finger click gesture is often treated as a right click.

See also:

Using the Mouse drag/wheel on the waveforms you can adjust zoom and playback rate of the tracks. For more information, go to *Waveform Displays*.
7.2 Using a Keyboard

Fig. 1: Mixxx Keyboard shortcuts (for en-us keyboard layout)
```
Download the image
```

Controlling Mixxx with a keyboard is handy. Unlike mouse control, the keyboard allows you to manage things simultaneously. For example, you can start playing a track on deck 1 whilst stopping deck 2 at the same time.

The default mapping for English keyboards is depicted in the figure above. It is divided into a left-hand side for deck 1 and right-hand side for deck 2. Please note that you can also access the functions through Mixxx's interface.

For some user groups, like those using *controllers* or *vinyl control*, it might be useful to enable/disable the keyboard mappings at runtime. You can do so by clicking *Options ‣ Enable Keyboard Shortcuts*.

Hint: If you hover with the mouse over a control (e.g. the crossfader) in the Mixxx user interface, the tooltip lists the keyboard shortcuts of the control among a description of the control.

See also:

For a list of default shortcuts, go to *Keyboard mapping table*.

7.2.1 Customizing the keyboard mapping

Mixxx allows you to customize the keyboard control. For more information, go to:

- *Making a Custom Keyboard Mapping*

7.3 Using MIDI/HID Controllers

Mixxx supports MIDI and HID *controllers* which are external hardware devices used to control audio applications. Many DJs prefer the hands-on feel of a controller with Mixxx because it can feel similar to using a real mixer and turntables or *CDJ*.

### 7.3.1 Loading a controller mapping

Fig. 2: Mixxx Preferences - Loading a controller mapping

Without loading the correct mapping, your controller does not work with Mixxx.

1. Connect your controller(s) to your computer

2. Start Mixxx

3. Go to *Preferences ▸ Controllers*

4. Select your device from the list of available devices on the left, and the right pane will change

5. Select the mapping for your controller from the *Load Mapping* drop-down menu

6. Make sure that the *Enabled* checkbox is ticked

7. Click *Apply* and Mixxx can now be controlled by your controller(s).

8. Repeat step 4-7 for any of the controllers you want to use

---

Hint: If you do not find a connected device in the list, make sure to install any necessary drivers for that device.

7.3.2 Supported controllers

Mixxx can use any *MIDI*/*HID* controller that is recognized by your *OS* (some may require drivers), as long as there is a MIDI/HID mapping file to tell Mixxx how to understand it. Mixxx comes bundled with a number of mappings for various devices. There are two levels of controller mappings:

- **Mixxx Certified Mappings**: These mappings are verified by the Mixxx Development Team.

- **Community Supported Mappings**: These mappings are provided and have been verified as working by the Mixxx community, but the Mixxx Development Team is unable to verify their quality because we don't have the devices ourselves. They might have bugs or rough edges.

If you run into issues with any of these mappings, please file a *bug report* on our Bug Tracker or tell us about it on our mailing list, forums, or *IRC* channel. Device support varies for each supported *OS*, so make sure to consult the documentation of the device.

Hint: Additional mappings are available in the Controller mapping forum.

See also:

Before purchasing a controller to use with Mixxx, consult our Hardware Compatibility wiki page. It contains the most up-to-date information about which controllers work with Mixxx and the details of each.

7.3.3 Installing a mapping from the forum

To use a controller mapping that did not come bundled with Mixxx, place the controller mapping in your User Mappings folder. To open it , go to *Preferences ▸ Controllers* and click the *Open User Mapping Folder* button. Alternatively, use your *OS* file browser to navigate there. The locations and more details can be found in *The Mixxx Settings Directory*.

If the mapping was posted as a `.zip` file, first extract the `.zip` file by right clicking on it in your file browser and selecting the option for extracting an archive or compressed folder. Copy the `.xml` file into your User Mapping folder. If there is a `.js` file, also copy that to your User Mapping folder. Restart Mixxx and *load the mapping*.

7.3.4 Map your own controller

There is no mapping available for your controller or you want to change an existing mapping? You can map your controller by using the Controller Wizard or take full control with the MIDI Scripting support in Mixxx.

See also:

Go to *Adding support for your MIDI/HID Controller* for detailed information.

7.4 Using Timecode Vinyl Records and CDs

Vinyl control allows a user to manipulate the playback of a track in Mixxx using a turntable or *CDJ* as an interface. In effect, it simulates the sound and feel of having your digital music collection on vinyl. Many DJs prefer the tactile feel of vinyl, and vinyl control allows that feel to be preserved while retaining the benefits of using digital audio.

See also:

Go to *Vinyl Control* for detailed information.

VINYL CONTROL

Vinyl control allows a user to manipulate the playback of a track in Mixxx using a real turntable as a controller. In effect, it simulates the sound and feel of having your digital music collection on vinyl. Many DJs prefer the tactile feel of vinyl, and vinyl control allows that feel to be preserved while retaining the benefits of using digital audio.

8.1 How does it work?

Vinyl control uses special *timecode* records or CD's which are placed on real turntables or *CDJ*. The audio output of the turntables is plugged into a audio interface connected to a computer on which Mixxx is running. When a record is played on one of the attached turntables, Mixxx reads the timecode from the record and uses the information to manipulate whatever track is loaded.

8.2 What do I need to use it?

It is possible to use Mixxx's vinyl control with a variety of setups. Unlike some proprietary DJ software, Mixxx can use several types of timecode media and any audio interface that your *operating system* has drivers to use. Optionally, any *MIDI/HID controller* can be used together with timecode control. The basic setups for timecode control are:

Setup 1: Vinyl DJ

> 2-4 timecode vinyls, 2-4 turntables with phono pre-amplifiers (or line-level output), and 2-4 stereo sound inputs.

> Your audio interface inputs must match the turntable outputs. Turntables output very quiet phono-level outputs that must be amplified for Mixxx to use. You should either find a audio interface that has phono pre-amplifiers built in (one for each deck), use standalone phono pre-amplifiers, or use turntables with built in phono pre-amplifiers.

> You can try skipping the phono pre-amps if you use the software pre-amp in Mixxx on the Vinyl Control preferences pane. This may not work for everyone. Line-level signals are preferred and recommended.

> For turntables a typical setup is depicted in the figure below. First, connect the RCA cables from the turntables to the inputs on your audio interface. Second, connect the outputs of your audio interface to the inputs on your mixer.

Note: Many modern turntables have a *Line/Phono* select switch. If yours does, make sure it matches the input or switch setting on your sound card.

Setup 2: CDJ

Fig. 1: Using Mixxx together with turntables and external mixer

2-4 timecode CDs, 2-4 CD decks, and 2-4 stereo sound inputs.

Setting up CDJs for use with timecode CDs is similar to setting up turntables. The figure below outlines a typical configuration. First, connect the RCA cables of the CDJs to inputs of your audio interface. Second, connect the inputs of your mixer to the outputs of your audio interface. Make sure the input mode of your audio interface is set to *Line*.

Sound inputs

- It is recommended to use a DJ audio interface that has **multiple** stereo line inputs on it.

- Alternatively you can use multiple audio interfaces, each with a single stereo line in, but this is strongly discouraged.

Mixxx supports vinyl control input through a single audio interface with at least 4-channels of input (two stereo line-in jacks), or through multiple separate audio interfaces which each have 2-channels of input (a single stereo line-in jack). Vinyl control requires the use of stereo line-in jacks - Mono or microphone inputs will not work.

It is strongly recommended to use a audio interface that comes with native low latency drivers such as ASIO (Windows) or CoreAudio (Mac). Linux users depend on the quality of the corresponding open source driver.

Note: For best scratch performance with vinyl control, we recommend using a system capable of *latencies* of 10ms. With higher latencies the scratch sound will start to become distorted.

Note: An external hardware mixer is not required for using timecode control. You can use a *MIDI or HID controller* to mix in software instead.

Fig. 2: Using Mixxx together with CDJs and external mixer

8.2.1 Supported Timecode media

You can use any of the timecode media supported by Mixxx:

Type	Responsiveness
Serato CV02/2.5 Vinyl	Very high
Serato Control CD 1.0	Very high
Traktor Scratch MK1 Vinyl	Very high
Traktor Scratch MK2 Vinyl	Not supported
MixVibes DVS V2 Vinyl	Very high

At the present time, Serato records are recommended if you are looking to buy vinyl. If you want to use CDs, you can download a free copy for personal use from Serato.

8.3 Configuring Input and Output devices

Mixxx can be controlled by up to 4 decks with either timecoded vinyl or timecoded CDs.

1. Open *Preferences* ‣ *Sound Hardware*

2. Select the *Input* tab

3. From the *Vinyl Control 1 - Vinyl Control 4* drop-down menus, select the audio interface(s) which your decks are plugged into.

4. In the channel selection drop-down menu, select the channel pairs corresponding to the plug on your audio interface that your deck(s) are plugged into, typically *Channels 1-2* and *Channels 3-4* etc.
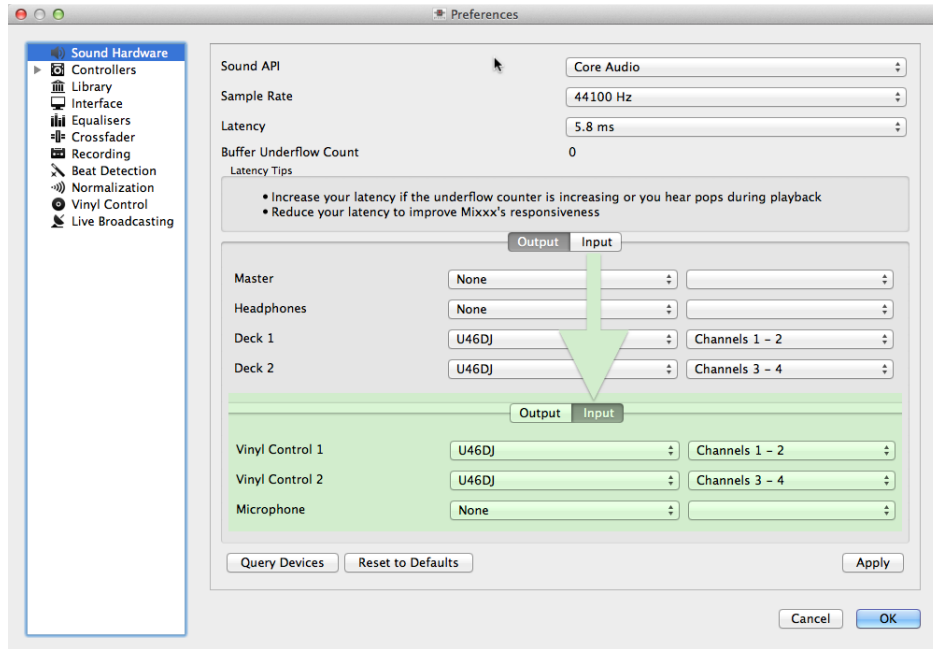

Fig. 3: Mixxx preferences - Setting up Input and Output devices for Vinyl Control

5. Click *Apply* to save the changes.

6. Select the *Output* tab

7. Specify *Deck 1 - Deck 4* to route Mixxx's output directly to the external mixer

8. Click *Apply* to save the changes.

8.4 Configuring Vinyl Control

You can configure vinyl control in *Preferences ▸ Vinyl Control*.

Fig. 4: Mixxx preferences - Setting up vinyl control

8.4.1 Turntable Input Signal Boost

Many turntables provide unamplified "phono level" output which must be boosted to a "line level" signal. Normally, a mixer or audio interface provides this amplification, but if you're plugging a turntable's phono output directly into a audio interface that doesn't support phono input, Mixxx can do the amplification. The *Turntable Input Signal Boost* slider allows you to adjust the level of preamplification applied to your decks' signal. However, it is always preferable to use a proper phono preamplifier if you have one.

8.4.2 Vinyl Configuration

- **Vinyl Type**: Several types of timecoded media can be used to control Mixxx. Configure the drop-down menus to match what type of timecoded media you are using on your decks.

- **Deck Vinyl Tempo**: Change this if you prefer to scratch with your turntable or CDJ set at 45 RPM, default is 33 RPM.

- **Lead-in Time**: Allows you to set a dead-zone at the start of your vinyl or CD, where the time code will be ignored. This is useful in situations where the time code begins very close to the edge of a vinyl which can make back-cueing over the first beat in a track tricky to do without your turntable's needle falling off the vinyl. Setting a lead-in time of 20 seconds or more helps alleviate this by giving you more room on the vinyl to cue with. It's also useful when you've worn the grooves at the edge of a control record to the point that it no longer works reliably: you simply set the lead-in so that the start of the tracks begin in good groove area. You can keep doing this until you run out of groove area, thereby decreasing your record replacement frequency.

- **Show Signal Quality in Skins**: If enabled, a circular representation of the incoming timecode signal is displayed in real-time on the *Vinyl Widget* in the Mixxx Interface.

Hint: Although not recommended, you can use different kinds of timecode media per deck.

8.4.3 Control Mode

Mixxx has three control modes regardless of which control records you use.

- **Absolute Mode**: Provides Mixxx with both pitch and position information from the timecode, and allows you to seek by needle dropping on your vinyl or seeking on your CDJ.

- **Relative Mode**: Takes the position to be relative to your deck's starting point, and only controls the pitch in Mixxx. It is not possible to seek using your deck in relative mode, with one exception. If you drop the needle in the *Lead-in Time* area (see *Vinyl Configuration*), Mixxx will seek back to the beginning of the track. Once a track is playing in Relative Mode, Mixxx will not allow you to select Absolute mode. Otherwise, the track would suddenly jump to a new position. Make sure the record is stopped and then you're free to select Absolute mode.

- **Constant Mode**: This special mode is usually only activated when Mixxx needs to keep playing a track even if the vinyl control signal isn't present. Constant mode is automatically enabled when the needle reaches the end of a vinyl control record.

8.4.4 Cueing Modes

Mixxx has two optional cueing modes for vinyl control which **only** apply to **Relative Mode**. These modes are useful for quickly seeking to specific positions in a track without touching the laptop. Turntablists often need to find a break or a vocal sample, and cueing modes make these easy to find.

- **Cue**: In this mode, when you drop the needle on the record *after* the Cue point, Mixxx will seek to that cue point.

- **Hot Cue**: When the needle is dropped Mixxx will seek to the nearest hotcue point, working backwards. So if you have a hotcue at the one-minute mark, and another at the two-minute mark, you can drop the needle anywhere between one and two minutes and Mixxx will seek to the one-minute hotcue.

Hint: You can change the Control and Cueing Modes directly in the Mixxx user interface while mixing, go to *Vinyl Control Mode and Cueing controls*. Alternatively, use the *Application shortcuts*.

8.4.5 Signal Quality

A successful vinyl control setup hinges on good signal quality. Many factors can affect signal quality, but the most important one is ensuring the volume level of your timecode signal is moderate. A signal that is too loud or too quiet will cause adverse performance, often characterized by a loss of position data causing absolute mode to behave like relative mode.

Mixxx represents the quality of the timecode signal as a circular graphic coming from the vinyl control audio itself. The graphs correspond to your active input devices *Deck 1 - Deck 4* .

If your vinyl signal is working, you should see a round, green circle drawn with two lines. This vinyl "doughnut" should be as circular as possible, and the lines should be clear with a minimum amount of fuzz.

Hint: You can display the signal quality in the Mixxx user interface while mixing, see *Configuring Input and Output devices* .

8.5 Enabling Vinyl Control

For each deck, select *Options ‣ Vinyl Control ‣ Enable Vinyl Control*, or use the *Application shortcuts*.

8.5.1 Vinyl Control Status Display

Fig. 5: The vinyl control status, and signal quality display of the deck

A rectangle provides visual feedback with regards to vinyl control status of a deck.

- **Off**: Vinyl control disabled on the deck.
- **Green**: Vinyl control is enabled on the deck.
- **Yellow**: The needle has reached End-Of-Record.

8.6 Single Deck Control

If you only have one turntable, you can still use Mixxx to play your sets. In the *Preferences ‣ Sound Hardware ‣ Input* tab, use the same audio input for both *Vinyl Control* decks.

When mixing, you'll have one track playing automatically while the other is controlled by the turntable. Start by enabling vinyl control on the first deck, and start mixing. When you're ready to cue up the next record, just disable vinyl control on the first deck and enable it on the second deck. Playback will continue on the first deck without interruption. Cue up the second track and mix it in. When you're ready to cue the first deck again, just toggle the second deck off and the first deck on again.

Use the *Application shortcuts* to swap focus from one deck to the other. Alternatively, select *Vinyl ‣ Single Deck mode* in the *Controller Wizard*, to assign the control to a key on your controller.

8.7 End-Of-Record Mode

Sometimes the track you are playing is longer than the timecode area on your record. If the needle reaches the end of the vinyl timecode, Mixxx will enter a special *End-Of-Record Mode*. When this happens, the vinyl indicator (usually a green rectangle) will blink yellow as a warning. At the same time, Mixxx will automatically enable *Constant Mode* and will ignore the turntable's pitch. At this point the track will simply continue playing until the end. When you load a new track, *End-Of-Record Mode* will be automatically disabled and *Constant Mode* turned off.

When you're in *End-Of-Record Mode* and you want to still use the turntable for pitch control, simply lift the needle and place it anywhere in the main timecode area. It's OK, the track won't stop playing. As soon as Mixxx detects that the needle has settled, it will automatically switch to *Relative Mode*.

8.8 Control Track

Some vinyl control records have a special portion of grooves near the center of the record for selecting and loading tracks in the user interface. You can see these grooves because there is a gap between the main timecode area and the inner circle. Some control records have not been tested with Mixxx, and their control areas are not supported. Serato CV02 Vinyl and Traktor Vinyl MK1 are known to work. Serato CV02 CDs are known not to work.

Just drop the needle in the control area and let the record play forward or backward. The highlighted row in the library should move up or down. Simply lift the needle and drop it anywhere in the main timecode area to load the track.
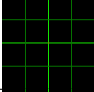

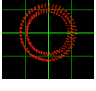

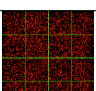

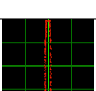

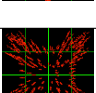

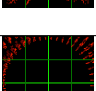

8.9 Troubleshooting
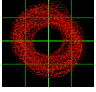

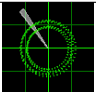

Configuration

To complete your setup you must configure Mixxx properly. Make sure you have:

- specified *Deck 1 - Deck 4* in *Preferences ‣ Sound Hardware* to route Mixxx's output directly to the external mixer
- specified *Vinyl Control 1 - Vinyl Control 4* under *Preferences ‣ Sound Hardware ‣ Input*
- selected the correct control type under *Preferences ‣ Vinyl Control ‣ Vinyl type* in the preferences. See the list of *Supported Timecode media*
- enabled vinyl control via the menu under *Options ‣ Vinyl Control ‣ Enable Vinyl Control*.

Signal Quality

The graph is displayed in *Preferences ‣ Vinyl Control*, see *Signal Quality*.

Signal	Meaning	Troubleshooting
	Vinyl control input channels not correctly set up. Vinyl control will not work.	Open Preferences/ Sound Hardware and set up the devices you want to use, see *Configuring Input and Output devices*
	Vinyl control input channels set up correctly. Waiting for timecode input signal.	Start your turntable or CDJ with the selected timecode vinyl or CD.
	Nearly perfect green doughnut about half the width of the graph. Rotating radar sweeps in the direction your record on the turntable is spinning.	Everything is OK, nothing to do. Go spin some beats.
	Incorrect choice of vinyl control source. Doughnut looks good but has a solid red color.	Select the correct vinyl type in the preferences. E.g. maybe you selected side B of the Serato Vinyl but your record is on side A.
	Input signal is bad. As the vinyl signal gets worse, you'll see the color of the doughnut change from green over orange to red.	Check the wiring / grounding on your turntable / CDJ. You timecode record / CD might be worn out or the needle on your turntable is dirty.
	Wrong direction. The green doughnut looks good but the radar sweeps in the opposite direction of the record on your turntable / CDJ.	You probably have a wiring problem. Try reversing the left and right inputs on your turntable. You may also have to rewire the headshell.
	Input signal is no timecode signal. Mixxx receives a normal audio signal while it expects a timecode signal.	Start your turntable or CDJ with the selected timecode vinyl or CD. You may want to check if the inputs devices are set up correctly in the preferences.
	Left or right channel is missing. Mixxx receives only a mono signal but needs a stereo timecode signal to operate.	Check the wiring on your turntable / CDJ and also the headshell and needle on your turntable.
	Timecode signal too loud. Mixxx receives a signal which has too much amplification.	Lower the amplification, either on your external mixer, audio interface, or with the *Turntable Input Signal Boost*.
	Timecode signal too quiet. Mixxx receives a signal which has not enough amplification.	Boost the amplification, either on your external Mixer, audio interface, or with the *Turntable Input Signal Boost*.

USING MICROPHONES

Mixxx can work with any microphone that can be plugged into your *audio interface*. There are three ways to use microphones with Mixxx, each with their own pros and cons:

- *Software Monitoring*: Cheapest and simplest to set up, but you cannot hear yourself without a disorienting delay, referred to as "latency".

- *Direct Monitoring*: Recommended for most users. This is the cheapest to set up with good sound quality and without the latency of software monitoring.

- *Hardware Mixers*: Most expensive option to set up with high sound quality. This does not have the latency of software monitoring.

> **Warning:** USB microphones are not recommended. These devices have their own audio interface built in and can only be used with software monitoring. Some USB microphones have headphone jacks for direct monitoring, but the music from Mixxx cannot be heard in this headphone jack. Also, they can be difficult to configure at the same time as a different audio interface for music output.

See also:

The Mixxx DJ Hardware Guide lists specific audio interfaces with information about their prices, features, and suitability for use with microphones.

9.1 Software Monitoring

Software monitoring can be used with the built-in microphone on a laptop or with a headset plugged into the built-in audio interface on a computer. However, there is a delay between the time you make sound into the microphone and hear it in the *main output*. Due to the nature of digital audio, it takes time for input from the audio interface to be available for Mixxx to process, time for Mixxx to process the audio, and more time to send the audio back out the audio interface. This time is referred to as "latency".

Mixxx can be configured to run at low latencies by choosing a smaller *Audio Buffer*, but there is no way to completely eliminate latency. Although latency is measured in milliseconds, even a few milliseconds of latency can be disorienting and distracting to hear, whether you are using the microphone for spoken announcements, vocals, or playing a musical instrument.

To use software monitoring:

1. Open *Preferences ‣ Sound Hardware*.

2. Select the *Input* tab.

3. For *Microphone 1*, select the audio interface that your microphone is plugged into.

4. Click the *Apply* button.

5. Click the *OK* button.

6. Click the *Mics* button in the main Mixxx window to show the microphone controls.

7. Click the *Talk* button when you are using the microphone.

Hint: If you would prefer to not hear the microphone input, you can set the *Microphone Monitor Mode* option to *Direct monitor (recording and broadcasting only)*. This will still mix the microphone input with your recorded and broadcasted mixes, but it will not mix the microphone with the main output. Don't forget to press the *Talk* button when using the microphone if you use this option.

9.2 Direct Monitoring

An audio interface with direct monitoring and a *Loopback Input* is the recommended way to use microphones with Mixxx for most users. Except for audio interfaces built into computers, most audio interfaces with microphone inputs support direct monitoring. However, not all audio interfaces that support direct monitoring also have a loopback input.

Direct monitoring routes the audio from the audio interface's inputs directly its outputs. This avoids the latency of sending it into the computer and back out with *Software Monitoring*. At the same time, the audio interface sends the input into the computer so Mixxx can record and broadcast it.

9.2.1 Loopback Input

Some audio interfaces that support *Direct Monitoring* have a loopback input feature. They add Mixxx's output to the microphone signal before sending it to the computer. This makes it easier to set up Mixxx with direct monitoring than configuring *Latency Compensation*.

To configure Mixxx with a loopback input:

1. Open *Preferences ▸ Sound Hardware*.

2. Click the *Input* tab.

3. Select the audio interface for the *Record/Broadcast* input. Do not configure anything for the *Microphone 1-4* inputs.

4. Click the *Apply* button.

5. Click the *OK* button.

6. *Activate direct monitoring and loopback on your audio interface.*

7. Adjust the microphone volume with the input gain knob on your audio interface.

The microphone controls in Mixxx will not affect your microphones because they are mixed by the audio interface and not sent directly to Mixxx.

9.2.2 Latency Compensation

When using *Direct Monitoring*, you will hear the microphone mixed with the music from Mixxx without any noticeable latency. However, it still takes time for Mixxx to receive the microphone signal and process it. Without compensating for this latency or using a *Loopback Input*, the microphone inputs will be out of time relative to the music in your recorded and broadcasted mixes.

Mixxx can compensate for this timing misalignment, but it is complicated to set up. If you do not want to record your microphone into your mix or broadcast, you can *activate direct monitoring on your audio interface* without configuring latency compensation.

Measuring Round Trip Latency

To configure Mixxx to compensate for input latency while using direct monitoring, first you must measure the round trip latency of your setup. The round trip latency is different from the size of the *Audio Buffer* configured in Mixxx. It is the amount of time it takes for audio to make a complete trip from your audio interface's input, through your computer, and back out the audio interface.

Mixxx cannot calculate the round trip latency because it depends on details of your audio interface's hardware, your operating system, your audio interface's driver, and other factors in your computer's hardware. The round trip latency can only be found by measuring it. To do this, use a physical cable to connect the audio interface's output to its input. Then, use a third party program to measure the round trip latency. These programs are recommended on each *OS*:

- **GNU/Linux**: jack_iodelay
- **Windows**: RTL Utility
- **macOS**: Audacity

You must use the same sample rate and audio buffer size in the measurement program as you do in Mixxx for the measurement to be accurate. If you decide to change the sample rate or buffer size you use with Mixxx, you will need to remeasure your round trip latency to have your microphone inputs aligned in your recorded and broadcasted mixes.

> **Warning:** Make sure direct monitoring is *not* *activated on your audio interface* while you are measuring the round trip latency or you will not get an accurate measurement.

Configuring Latency Compensation

1. Before opening Mixxx, *measure the round trip latency*.
2. Open Mixxx.
3. Open *Preferences ▸ Sound Hardware*.
4. Click the *Input* tab.
5. Select the audio interface input(s) for the *Microphone 1-4* inputs. Select a single mono channel for each Microphone input unless you are using stereo microphones.
6. For the *Microphone Monitor Mode* option, select *Direct monitor (recording and broadcasting only)*.
7. Enter the measured round trip latency in milliseconds for the *Microphone Latency Compensation* option.
8. Click the *Apply* button.
9. Click the *OK* button.
10. *Activate direct monitoring on your audio interface.*

11. Click the *Mics* button in the main Mixxx window to show the microphone controls.

12. Click the *Talk* button when you are using the microphone.

13. Adjust the microphone volume with the input gain knob on your audio interface. Do not adjust the microphone gain in Mixxx. If you do, the relative volume of the mics and music will be different in your recorded and broadcasted mixes compared to what you hear out of your audio interface.

Mixxx will not record or broadcast your microphone if the *Talk* button is not active. However, you will still hear the microphone in your main output because the microphone is mixed by your audio interface, not Mixxx. You may leave the *Talk* button on to ensure you do not forget it, but this will record and broadcast background noise when you are not actively using the microphone. If your microphone has an on/off switch on it, you may leave the *Talk* button enabled in Mixxx and use the switch on the microphone to avoid adding background noise to your mix. Alternatively, you can adjust the input gain on your audio interface throughout your mix.

9.2.3 Activating Direct Monitoring And Loopback On The Audio Interface

General tips for activating direct monitoring and loopback are described below. However, every audio interface is different, so refer to the audio interface manual from the manufacturer for more details.

On stand-alone audio interfaces, there is often a knob on the device that controls direct monitoring. This knob crossfades the audio interface's output between the signal from the computer and the directly monitored inputs. If your audio interface has a knob like this, set the knob to the center. Alternatively, some audio interfaces have a switch to toggle direct monitoring instead of a knob.

To hear mono microphone inputs on both sides of the stereo output with direct monitoring, you typically need to toggle a switch on the device.

If the audio interface supports *Loopback Input*, that may be activated by a switch on the device.

Audio interfaces with lots of inputs and outputs often have a control panel program provided by the manufacturer that is installed automatically with the driver. This may be used instead of knobs and switches on the hardware to control direct monitoring, loopback, stereo/mono switches, and other audio interface features. On GNU/Linux, you might be able to access these controls with `alsamixer`.

Refer to the section below for details about *DJ Controllers With Microphone Inputs*.

9.3 Hardware Mixers

Mixxx can be used with a microphone plugged into an external hardware mixer. This does not have the problem with latency that happens with *Software Monitoring*. However, it is generally recommended to use an audio interface that supports *Direct Monitoring* and a *Loopback Input* instead of an external mixer. If you are using *Vinyl Control* and a microphone, you may need an external mixer.

Mixxx can send each deck to separate stereo channels on an external mixer by using the *Deck 1-4* outputs. This requires an audio interface with at least 4 output channels (2 stereo pairs). Audio interfaces built into computers only have one stereo output and they do not have high sound quality. Thus, another audio interface is recommended. Audio interfaces with at least 4 output channels typically have microphone inputs and support *Direct Monitoring*, so there is no need for the external mixer.

However, audio interfaces with phono preamplifiers for *Vinyl Control* do not have microphone inputs. If you want to use vinyl control with a microphone, it is recommended to plug the microphone into a DJ mixer.

> **Warning:** Some mixers that are not designed for DJing have a built-in USB audio interface. However, the audio interfaces in these mixers typically send only 2 channels (one stereo pair) to the mixer, so they are not recommended.

9.3.1 Recording And Broadcasting With An External Hardware Mixer

To record or broadcast with an external hardware mixer, the output of the mixer needs to be connected to the input of an audio interface. Most DJ mixers have an extra output for this which may be labeled "record", "session", "auxiliary", or "booth". Some audio interfaces for vinyl control have enough input channels to receive the output of the mixer and timecode from two turntables. If yours does not, you may use the input of the audio interface built into your computer, but these do not have high sound quality.

Alternatively, some DJ mixers have a built-in USB audio interface. These have inputs with phono preamplifiers for vinyl control and usually can send the record output back to the computer without a separate audio interface. Many (but not all) of these mixers are digital mixers, so they can send signals back and forth to Mixxx without converting them to analog. This results in higher sound quality for your recorded and broadcasted mixes compared to using a separate audio interface with an external mixer.

To configure Mixxx for using a hardware mixer for recording and/or broadcasting:

1. Open *Preferences ▸ Sound Hardware*.

2. In the *Output* tab, select the audio interface for the *Deck 1-2* outputs (and *Deck 3-4* outputs if your audio interface and mixer support 4 decks).

3. Click the *Input* tab.

4. For the *Record/Broadcast* input, select the audio interface connected to the mixer's output. For mixers with a built-in USB audio interface, refer to the mixer manufacturer's manual to find which channels of the mixer's audio interface send the record output.

5. If you are using vinyl control, select the audio interface connected to the turntables for the *Vinyl Control 1-4* inputs.

6. Click the *Apply* button.

7. Click the *OK* button.

Do not configure anything for the *Microphone 1-4* inputs when using an external mixer. The microphone controls in Mixxx will not affect your microphones because the microphone is mixed by the external mixer.

DJ mixers typically do not supply phantom power required for condenser microphones. Stand-alone audio interfaces typically do supply phantom power.

9.4 DJ Controllers With Microphone Inputs

DJ controllers with microphone inputs typically mix the microphone input with the *main output* without sending it to the computer. This does not have the problem with latency that happens with *Software Monitoring*. However, many cheap DJ controllers do not digitize the signal to make it available to the computer. Refer to the controller's page on the Mixxx wiki or the manual from the controller manufacturer for details about your particular controller.

If the controller does not digitize the microphone input, you cannot use Mixxx's microphone input to record or broadcast with the microphone using Mixxx's *Microphone 1-4* inputs. It is still possible to record and broadcast the microphone by connecting the booth output of the controller to an audio interface input and configuring this for Mixxx's *Record/Broadcast* input. If the controller does not have a booth output, a Y splitter cable can be used on each side of the stereo main output to connect the main output to both the speakers and to another audio interface's input.

DJ controllers typically do not supply phantom power required for condenser microphones. Stand-alone audio interfaces typically do supply phantom power.

9.5 Microphone Ducking

Microphone ducking is a technique to improve the audibility of speech by reducing the volume of background music while a voice signal is recorded by the microphone and allows listeners to hear the voice more clearly and consistently. While using Mixxx with a microphone, you might want the music to automatically fade into the background each time you speak, or you might prefer lowering the volume of the music to a specific level. Microphone ducking helps you achieve this. The music will 'duck' out of the way of the microphone audio.

Fig. 1: The microphone ducking controls

The *Strength* knob adjusts the microphone talkover ducking strength and its behaviour depends on any of the Microphone talkover modes described below. Clicking on the *Auto* button will switch it to any of three modes:

- *Off*: When you speak through the microphone, the music volume does not reduce.

- *Auto*: When you speak through the microphone, the music volume will be reduced when Mixxx detects your voice. You can adjust the amount by which the volume is automatically reduced with the Strength knob.

- *Manual*:In this mode, the music will play at the volume set by the Strength knob whenever the microphone Talk button is active, regardless of the volume coming through the microphone input. When you speak through your microphone, set the volume to which the music should reduce by turning the Strength knob to a level that suits you. When you disable Talk mode, the music will return to the regular volume

---

Hint: To set the Ducking volume correctly, you can use manual mode to adjust the knob to your taste and then set to auto when happy.

LIVE BROADCASTING - START YOUR OWN INTERNET RADIO

Live Broadcasting in Mixxx allow you to stream your mix over the Internet to listeners around the world.

See also:

The *Using Microphones* chapter has detailed instructions for including input from microphones in your broadcasted mixes.

10.1 Streaming Servers

Remote streaming server
Mixxx allows you to feed your audio stream directly to *Shoutcast* and *Icecast* streaming servers. Depending on the number of listeners, streaming audio requires a significant amount of bandwidth. Streaming servers provide the required bandwidth and broadcast the stream to your listeners.
Fig. 1: Mixxx as client-side streaming source broadcasting to an remote streaming server

Local streaming server
For experienced users, it may be interesting to set up your own local streaming server. This turns your personal computer into a radio station and listeners connect directly to your server. Mixxx as a streaming source does not need to run on the same computer as your streaming server. However, professional stations often run the streaming source on the same computer as the streaming server for stability and reliability reasons. Keep in mind that if want to stream audio to a significant number of listeners, you'll need enough bandwidth. Read the Shoutcast documentation or Icecast documentation for server setup instructions.
Fig. 2: Mixxx as client-side streaming source broadcasting to an local streaming server

10.2 Configuring Mixxx

Start by supplying Mixxx with all information needed to establish a connection to the streaming server:

- Open *Preferences ‣ Live Broadcasting*.
- Insert the settings following the descriptions in the *Mixxx preferences - Setting up live broadcasting*
- Click *OK*
- Go to *Options ‣ Enable Live Broadcasting* or use the *Application shortcuts* to start broadcasting.

Fig. 3: Mixxx preferences - Setting up live broadcasting

10.2.1 Server Connection

- **Type**: Select the type of streaming server you want to connect with. *Shoutcast 1*, *Icecast 1*, and *Icecast 2* servers are supported.

  Mixxx works with Shoutcast 2 using the Shoutcast 1 protocol if you provide a stream name in *Preferences ▸ Live Broadcasting ▸ Stream Settings*. If you don't provide a stream name, Shoutcast 2 rejects the connection (where Shoutcast 1 would accept this case).

- **Host**: You can enter the host as either a host name or an IP address.

- **Login**: As provided by your streaming server provider. Without this, you will not connect successfully to the server. The default login for *Icecast* is `source` while the default login for Shoutcast is `admin`.

- **Mount**: A mount point is a unique name identifying a particular stream. For *Shoutcast* it is not necessary to specify a mount point. The setting must not be blank if you are using *Icecast*. Try the default `/mount` or `/live`. If you haven't been given a specific mount point you can usually make one up. It always begins with a / (slash) followed by a text without any special characters in it.

- **Port**: As provided by your streaming server provider. Most servers use the default port 8000.

- **Password**: As provided by your streaming server provider, unless you run your own radio server. It is required to establish the connection to the server and to start the broadcast.

> **Warning:** Do not enter a *URL* as the host! `http://example.com:8000` does not work. Use `example.com` in the *Host* field and `8000` in the *Port* field instead.

10.2.2 Stream Settings

- **Public stream**: If enabled, this option adds your radio station to the Shoutcast/Icecast directory.

- **Enable UTF-8 metadata**: If enabled, this option fixes broken accented and foreign language symbols in *metadata*, assuming the streaming provider has configured the server to support UTF-8 metadata.

- **Dynamically update Ogg Vorbis metadata**: Due to flaws in some streaming clients, updating Ogg Vorbis metadata dynamically can cause listener glitches and disconnections. Check this box to update the metadata anyway. Some players that listeners can use have bugs that can cause audio glitches or disconnections when the Ogg Vorbis metadata is updated dynamically. If this is not a problem, you can enable this checkbox.

- **Stream name**: So, what's the name of your show?

- **Website**: The website you would like your listeners to visit.

- **Description**: Enter your DJ name and a short tagline.

- **Genre**: List the main genres you play. This attracts search hits on stream directories. Genre must not be blank.

10.2.3 Encoding

- **Bitrate**: Selecting a *bitrate* of 128 or 160 *kbps* is common and provides sufficient quality to your listeners. Higher bitrates will use a larger chunk in your Internet connection bandwidth to stream and for your listeners to receive the stream.

- **Format**: Mixxx supports streaming to Icecast servers either in *MP3* or *Ogg Vorbis* format, streaming to Shoutcast servers is supported in *MP3* format.

10.2.4 Metadata

Shoutcast metadata format

This allows to set custom metadata formats for the Shoutcast title field. Previously only `artist - title` was allowed. For example if you were broadcasting as part of a station, you could add the station's name or the presenter's name in the title: `MyStation | $artist - $title`. Or if you were doing a live mix with several artists, you could have: `Live mix by MyName - currently playing: $artist`. Or even if you wanted a very unusual format: `Hey, I like $artist, here is $title by $artist`.

The changes **do not** affect the case for the combination of OGG/Icecast2.

Custom metadata

By default, Mixxx broadcasts artist and title information of the files that you play to your listeners. You can disable this feature and use your own custom metadata.

- **Enable custom metadata**: Toggles custom metadata on and off.

- **Artist**: Insert your custom artist metadata here, your DJ name for example.

- **Title**: Insert your custom title metadata here.

10.2.5 Icecast vs. Shoutcast

Both essentially serve the same purpose. An Icecast server can stream either *MP3* or *Ogg Vorbis*. However, although Ogg is more efficient and effective (you get higher-fidelity sound than MP3 at lower data rates) not all players can play Ogg streams. As a result MP3 is probably a safe choice unless you know your listeners can hear an Ogg stream successfully.

10.2.6 Broadcast directories

Generally your streaming server host adds your radio station to the Shoutcast/Icecast directory, if you enable the *Public Stream* option in *Preferences ‣ Live Broadcasting ‣ Stream Settings*.

- **Shoutcast radio directory**: www.shoutcast.com

- **Icecast radio directory**: dir.xiph.org

Often streaming hosts will run their own directories. Check your host's FAQ to find out. If you want to promote your streaming radio station even more, register at services like streamfinder.com. An overview of different internet radio directories is available at shoutcheap.com

10.3 Troubleshooting

- If you have trouble connecting to your streaming server, check the configuration in the *Mixxx preferences - Setting up live broadcasting*.

- You may have selected the *Ogg Vorbis* format that is unsupported by Shoutcast servers.

- You may need to check your firewall settings. Both Icecast and Shoutcast use two ports. If you are streaming on a port (for example, port 8000) then you need to open up the next port (port 8001) as well.

- You may need to configure port forwarding if you are behind a router or your router will block requests to your streaming port (for example, port 8000)

EFFECTS

Mixxx has a powerful sound effects system. Understanding how it works can open you up to a wide variety of mixing techniques.

11.1 Effect Units

Mixxx has 4 effect units. By default, only 2 of them are shown. The other 2 effect units can be shown by toggling the setting in the skin settings menu.

Fig. 1: An effect unit

Each effect unit can load up to 3 effects in a chain. These effects are processed one after the other in series. You will hear different sounds depending on the order of effects within the chain. Each effect in the chain has its own button to toggle it on and off.

Effect units can process sound from:

- decks
- microphones
- auxiliary inputs
- the main mix
- the *PFL* (headphone) mix
- left/middle/right crossfader buses

The buttons to route effect units to decks, microphones, and auxiliary inputs are located in the deck, microphone, and auxiliary sections of the skin. The buttons for routing other inputs to effect units are in different locations depending on the skin.

If a channel is assigned to multiple effect units, those effect units are chained together. This allows you to chain more than 3 effects at a time.
Fig. 2: The effect unit buttons located in the deck.

To route deck 1 to effect unit 1, click the *FX1* button on deck 1 to turn it on. To route deck 2 to effect unit 2, click the *FX2* button on deck 2, and so on. It's also possible to route a single deck to multiple effect units, or multiple decks to a single effect unit.

The mix knob adjusts the mix between the dry signal (input to the unit) and the wet signal (output of the last effect in the unit). It changes the level of all 3 effects in the unit together. Refer to the *Effect Unit Mix Modes* section below for details.

Effects are processed after the deck faders and crossfader. This allows effects like Echo and Reverb to continue outputting sound after their input has been cut off by lowering the fader. Unlike other DJ software and hardware, effects can also be heard in headphones even though they are processed after the faders for the *main output*. Refer to the *Effects In Headphones* section below for details.

Note that equalizer and filter effects create a phase shift. If the mix knob is anywhere in the middle between dry and wet and any of these effects are enabled in the unit, there will be comb filtering which is probably not desired. For more background information, read Equalizers and Phase Shift.

11.2 Effect Parameters & Metaknobs

Every effect within an *Effect Unit* has its own set of parameters. By default, these are hidden. Instead, there is a single knob called a "metaknob" for each effect which is linked to the different parameters. The metaknob allows you to easily control the effects in a unit without having to manipulate every parameter individually.

If you want more detailed control of effects, press the expansion button on the effect unit to reveal the effect parameters:

Fig. 3: An effect unit with parameters showing

You can customize how the metaknob is linked to the parameters by clicking the buttons below the parameter knobs. The button under the parameter name controls the metaknob link mode:

- Inactive: parameter not linked

- Active: parameter moves with metaknob

- Left side active: parameter moves with left half of metaknob turn

- Right side active: parameter moves with right half of metaknob turn
- Left and right side active: parameter moves across range with half of metaknob turn and back with the other half

The button below the metaknob link button inverts the parameter's relationship to the metaknob.

For information about specific effects and their parameters, hover your mouse over them to show the tooltip. If you do not see tooltips, check that you have them enabled for the skin in *Preferences ▸ Interface*.

Effects (except for Reverb) that have a length of time as a parameter are synchronized to the tempo of decks.

11.3 Effect Unit Mix Modes

The effect unit mix knob controls the level of all 3 effects in the unit together. It can be toggled between two different modes with the mix mode button adjacent to it.

Fig. 4: An effect unit in Dry/Wet mode

In the default Dry/Wet mode, the mix knob crossfades between the dry signal (input to the first effect in the unit) and the wet signal (output of the last effect in the unit). When the knob is fully left, no sound will be heard from the effect unit. When the knob is fully right, only the output of the effect unit will be heard without any of the dry input signal.

Fig. 5: An effect unit in Dry+Wet mode

In Dry+Wet mode, the dry signal is always at full volume. The mix knob controls how much of the wet signal is added to the dry signal. A useful example for Dry+Wet mode is loading a filter or equalizer effect before the Echo effect. With this setup, the filter or equalizer can remove bass frequencies from the echoed signal without removing them from the unechoed signal. If the effect unit is switched to Dry/Wet mode with the same effects in the same order, the bass frequencies will be taken out of the echoed signal, but they will also be removed from the unechoed signal.

11.4 Effects In Headphones

To preview how a track will sound with effects before you mix in the track, simply assign the deck to an effect unit and enable the headphone button for the deck. Note that this will increase CPU compared to assigning an effect unit to a deck without the headphone button enabled. This is because effects are processed in parallel for the *headphone output* (prefader) and *main output* (postfader).

Effects can also be previewed in headphones on decks that are playing to the audience, but this requires a few more steps:

1. Disable the effect unit for the deck

2. Enable the headphone button for the deck

3. Enable the headphone button for the effect unit

4. Enable effects and adjust their metaknobs and parameters for how you want the effects to sound.

5. When you are ready to mix in the effect, turn the mix knob fully left (dry)

6. Enable the effect unit for the deck

7. Turn the mix knob right so the effects are heard in the main output

8. Disable the headphone button for the effect unit so you do not forget to turn it off later

11.5 Controller Effects Mapping

11.5.1 Usage

This section describes how to use the standard Mixxx mapping for effects sections on controllers with the typical layout of 4 knobs (or 3 knobs + 1 encoder) and 4 buttons for effects. It allows you to switch between controlling all 3 effects of a chain or controlling each parameter of one effect.

By default, 3 knobs are used for controlling effect metaknobs and the buttons under them toggle each effect on/off. To temporarily toggle an effect on/off, press and hold an effect enable button. The 4th knob is used for the mix (dry/wet) knob of the whole chain. On controllers designed for Serato, the *Beats* encoder is used as the mix knob.

The button next to the mix knob is used for focusing effects. On controllers designed for Serato, this button is labeled *Tap*. While holding this button pressed, the enable buttons for each effect switch to choosing which effect is focused. When an effect is focused:

- the knobs switch to controlling the first 3 parameters of that effect instead of the metaknobs of each effect in the chain;

- the buttons switch to controlling the first 3 button parameters of the effect; and

The LED of the focus button indicates whether any effect is focused. When its LED is on, you can hold the button down to see which effect is focused without having to look at the computer screen. To unfocus the effect, you can short press the focus button. The focused effect is remembered, so when you short press the focus button again, the previously focused effect will be refocused (it is not remembered when you shut down Mixxx though).

Alternatively, if you want to keep all the parameters showing on screen, you can press and hold the focus button, then press the button of the focused effect to unfocus it. Showing all the parameters without having an effect focused is helpful for experimenting with different ways of linking parameters to the metaknob.

When the focus button is pressed with shift, it toggles the Effect Unit between controlling different *Effect Units* in Mixxx. Typically this is used to toggle between *Effect Units* 1 & 3 or 2 & 4, like deck toggle buttons.

To load different effects, hold shift and turn the knob for an effect.

To load chain presets 1-4, press the buttons with shift (new in Mixxx 2.4).

11.5.2 Implementation

The described behaviour is implemented with the effect components of the Components-JS library . If you want to create or update a mapping take a look at Components-JS > Effect Unit . It provides building blocks for entire units (effect units, decks) or just single controls.

DJING WITH MIXXX

Mixxx was designed to be easy to learn for both novice and experienced DJs.

This part of the manual provides you with directions for using Mixxx's features to create your own mixes.

12.1 Setting Your Levels Properly (Gain Staging)

Setting your levels properly, also known as gain staging, is essential for getting the best sound quality out of the equipment you are using. At every link in your signal chain, from Mixxx's channel gains to the power amplifier, the level should be well above the noise floor, but lower than the maximum level before the signal clips. The *level meters* should mostly be around the top of their green region. The level meter pictured to the left shows where Mixxx's level meters should average at the loudest parts of tracks. The average level should not be in the yellow region. Use the yellow region to leave headroom, or available level above the average before the signal clips. The loudest parts of the music (the transients) should briefly go into the yellow region.

Fig. 1: A waveform at a good level. Note that the example waveforms in this section were made by adjusting the visual gain of the waveform display in Mixxx to illustrate the concepts. Adjusting the visual gain of the waveform display does not change the level of the audio.

If a level meter is in its red region, the signal is clipping and the gain should be turned down. Some equipment doesn't have a level meter and only has an LED that turns on when the signal clips. Clipping means that the peaks of the waveform are flattened because the equipment has reached the maximum level that it can amplify the signal to. This distorts sound in an unpleasant way and can damage equipment by driving it with more power than it is designed to handle. Increasing the gain past the point where clipping begins (further into the red on a meter) will distort the signal more. If you want to make the sound louder when every part of the signal chain is at its maximum without clipping, use more speakers or use speakers that are more sensitive and convert electrical energy into acoustic energy more efficiently.

Fig. 2: A clipping waveform

On the other hand, the signal should not be too low. This is because every audio device generates a little noise at a level referred to as its noise floor. Additionally, analog signals pick up noise as they travel along wires. The signal measured by the meter on the left is relatively close to the noise floor. When a device is turned up, the noise floor does not go up; only the signal does. However, every time the signal is amplified by the gain of another piece of equipment, both the noise and the signal from previous devices in the signal chain are amplified. For example, if your sound card is turned down and you turn the gain up on your mixer to compensate, the signal-to-noise ratio (SNR) of the sound card output will be low and the mixer's gain will amplify the signal and the noise from the sound card, plus the noise picked up along the wire. The end result will have more noise than if the output of the sound card was turned up before the signal reached the mixer and the mixer's gain did not have to be turned up.
Fig. 3: A waveform that is too close to the noise floor

Note: To adjust the output volume of a sound system while maintaining a high signal-to-noise ratio, the gain should be adjusted as close to the speakers as possible. Refer to the *Gain Knob* section for details.

12.2 Beatmatching and Mixing

Beatmatching is the process of adjusting the playback rate of a track so that it matches the tempo of another track. Beatmatching also involves adjusting the *phase* of the beats in a track so that they are aligned with the beats in the other track. Matching the *tempo* and aligning the beats are the two things a DJ must do to beatmatch.

Mixxx can match the tempo and align the beats for you but this requires an accurately detected BPM value and a correct beat grid for both tracks. To enable this feature, tap the *SYNC* button. To beatmatch manually, the tempo of the two tracks must be synchronized by adjusting the playback rate sliders. You can adjust the phase of the beats by right-clicking and dragging on either waveform display to temporarily speed up or slow down one of the tracks until the beats are aligned. The temporary pitch bend buttons can also be used to momentarily adjust the playback rate, allowing you to "shuffle" the beats in a track forwards or backwards, so they can be aligned with another track. See the chapter *Sync and Rate Controls*.

Two tracks are beatmatched once their tempos are matched and their beats are aligned. A "perfect" beatmatch is nearly impossible - there will always be a tiny difference in the playback rates. A keen DJ will keep his or her ears open and listen for the beats drifting out of alignment. This has a distinct "double bass kick" sound which is often preceded by the kick weakening in intensity as the two kicks drift out of phase. When this happens, the beats can be realigned by simply tapping one of the temporary pitch bend buttons a few times in the appropriate direction.

12.3 Sync Lock

Sync Lock is an intelligent assistant that allows you to leave the beatmatching to Mixxx so you can focus on track selection, effects manipulation, looping, 4 deck mixing, and other advanced DJing techniques.

To activate Sync Lock on a deck, push and hold (or click and hold) the *SYNC* button. You'll know Sync Lock is on because the sync button will remain lit. Changing the rate of any deck that has Sync lit will change the rates of all other decks that also have the Sync button lit. There is no need to set specific decks to be a leader or followers. You can play, stop, eject, load, and queue any track with sync lock and it won't interrupt the playback of the other decks. However, changing the rate of a stopped deck will change the rate of playing decks.

Sync Lock will also notice if one of your tracks is double the BPM of another track and match them correctly. So if you want to mix a 140 BPM drum & bass track with a 70 bpm dubstep track, Sync Lock will make sure they are lined up properly.

Hint: Usually, Sync Lock will only make sure the rate sliders are set correctly. If you also want to make sure your beats are perfectly in sync, turn on the *QUANTIZE* button. When activated, Quantize will ensure that the beats are perfectly lined up as well.

12.4 Sync Lock with Dynamic Tempo

If you're working with dynamic tempo tracks that have a variable BPM beat grid, you have precise control over the sync lock behavior via the following Sync Leader buttons (available in the LateNight and Deere skins only).

 Follower   Soft Leader

You can create a variable BPM beat grids for single tracks by using the *Analyze* library context menu and *Reanalyze (variable BPM)* command. Alternatively you may create variable BPM beat grids for all tracks to be (re)analyzed later on by unchecking *Assume constant tempo* in the *Beat Detection* preferences.

When such a track is playing in a Leader deck, the follower decks closely follow the tempo. It's important to note that the track follows the "detected" leader tempo unconditionally, even if there are sections with unstable tempos during bridges or in the outro regions where the actual played tempo wasn't detected correctly.

If a soft leader deck stops or is silenced, Mixxx automatically selects the next best deck as Leader. By clicking the Leader button, you can choose between Soft Leader and Follower mode. A Soft Leader is not sticky, and will automatically move if the current leader becomes invalid.

By default the "Sync Lock with Dynamic Tempo" feature is enabled and Mixxx picks the first Sync Lock enabled track as Soft Leader, using the tempo from its outro during the following transition. If you'd like to use the the tempo from the intro of the next track instead, click the Leader (Crown) button of its deck. The deck then becomes the soft leader, and Mixxx will use that deck's tempo instead.

The only case when a stopped deck can be a Leader is if no other deck is playing. Once a deck starts playing, Mixxx will pick that as the leader instead. If another deck starts playing, then you will be able to pick which one you want to be the leader again.

If you'd prefer a steady tempo during transitions like in Mixxx before Version 2.4, you may select *Use steady Tempo* for *Sync mode* in the *Decks* preferences. In this mode all decks become a follower during a transition and you may pick a dynamic track as a leader by clicking the Leader (Crown) button if desired.

A leader plays always the original recorded tempo changes. A follower changes its tempo matching the leader which may result in a notable pitch change. Engaging keylock helps mitigate this pitch issue.

12.5 Harmonic Mixing

Harmonic mixing is a technique to mix songs with matching melodies and harmonies. To learn more about harmonic mixing you might want to check out the mixshare archive.

Mixxx has two features to help you with harmonic mixing. The first is a *key lock*. When it is active changing the speed of a track won't affect the key. To enable *key lock*, click the *key lock* button in the *Deck Options Button Grid*. The second is that Mixxx can automatically detect the key of a track and will display it in the library and the decks. The notation which is used to display a key can be changed in *Key Detection Preferences*.

12.6 Recording Your Mix

With the integrated recording feature you can record your mix as an audio file and listen to it later, distribute it as a *Podcast* or burn it to CD.

By default, Mixxx records the *main output*. Alternatively, Mixxx can record the output of an external mixer if you have an audio interface configured for the *Record/Broadcast* input in *Preferences ▸ Sound Hardware*. Refer to *Recording And Broadcasting With An External Hardware Mixer* for details.

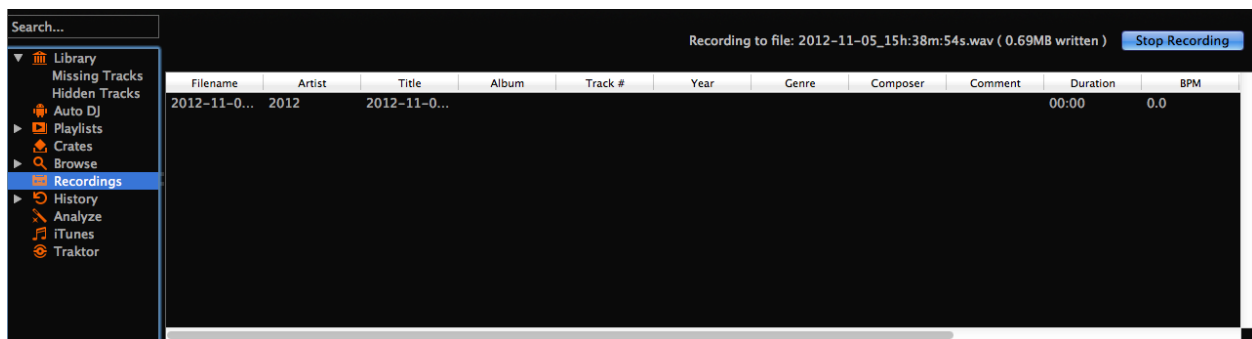

Fig. 4: Mixxx library - Recordings view

Mixxx can record your mix in various audio formats and quality settings. You can split your recordings, generate *cue files*, choose a custom recording directory and even set your own *metadata*. By default, Mixxx saves your recordings as lossless *WAV* files to a `Mixxx/Recordings` sub-folder in the Mixxx music directory. Before you start recording, we recommend that you adjust the settings in *Preferences ▸ Recording*.

If you click on the *Recordings* icon in the sidebar of the Mixxx library, the track table to the right displays the content of your recordings directory. New recordings are automatically saved to this directory as well as CUE files if you choose to create them in the preferences.

Hint: Recording your mixes and listening to them later to critique yourself is a great tool for improving your DJing skills. Sending your mixes to other DJs for feedback can also be helpful.

12.6.1 Record your mix to disk

Click on the recording icon on top of the application window to start, and stop the recording session. The duration of the running recording is displayed next to the icon.

Note: The recording widget might not be available in some skins.

Alternatively:

- Click on the *Recordings* icon in the sidebar to switch to the *Recordings* view

- Click the *Start Recording* button or click *Options* ▸ *Record Mix* in the menu on top of the Mixxx application window.

- The display above the track table shows how much data has already been recorded, as well as the duration of the recording.

- Perform your mix

- Click the *Stop Recording* button to stop the recording when the mix has finished.

Hint: You can instantly play your recording as a track in Mixxx. Simply drag-and-drop the track to a deck.

12.7 Intro and Outro Cues

Intro/Outro cues are used to mix in and out of tracks and they can also be *used with Auto DJ* to mix in and out at those points. Unlike *hotcues*, they do not mark only one point. The into and outro are sections and each section is defined by two points.

Mixxx detects where the first and last sounds are when analyzing a track making it easy to stop playing silent parts at the beginning and at the end of the track. The analyzer places the intro start point at the first sound and the outro end point at the last sound. The first and last sounds are determined by the first time the signal rises above -60 dBFS and the last time it goes below -60 dBFS.

Fig. 5: Intro start and outro end cues placed at the first and last sound of a track respectively by the analyzer

You can decide where to place the intro end and the outro start points. Marking the whole intro and outro allows Mixxx to calculate how long each section is and show it on the overview waveform. This information can help you know when to press play on the next track. *Auto DJ can also use this information* to line up tracks and determine how long to crossfade.

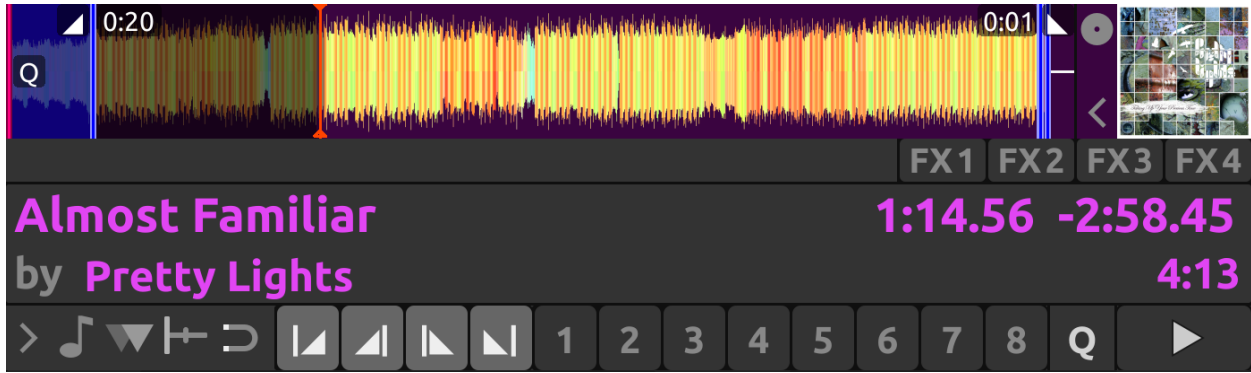

Fig. 6: Intro end and outro start markers placed on the track alongside the intro start and the outro end markers to make sections

12.7.1 Mixing With Intro & Outro Cues

You can line up the ends of the intro and outro so the energy of the new song picks up right as the old track ends.

Fig. 7: Intro and outro end markers aligned showing on the waveform

If the intro and outro are short enough to fit on the waveform at the same time, you can simply watch the waveforms and press play when the markers align. Otherwise, you can watch the time remaining on the deck and hover your mouse cursor over the outro end line on the overview waveform. Mixxx will show you how much time is left until that point. When that time equals the length of the intro, press play to precisely line up the end of the intro. If you have changed the tempo of the track, the time remaining scales to show the real time remaining at the adjusted tempo.
Alternatively, you can line up the start of the intro & outro. In this case, watch the scrolling waveform when the outro start point is coming up on the old track. Then, press play on the new track when the old track reaches the outro start.

Note: There are no rules on which method should be used. The method you decide to use is an artistic judgement based on the musical content of each track, what the vibe of the crowd is at that moment, and what you want to do with the mix.

If you do not have the intro end and outro start points marked when loading a track, you can find and mark these in headphones before you mix in the track. Then seek back to the intro start to get the track ready. If you don't have time to find the outro end point before mixing in the track, you can use the deck cloning feature to drag and drop to a new deck, then seek ahead on the new deck and listen in headphones to mark the outro start point. If you don't have time to do that either, you can right click on the overview waveform where you think the outro starts. Then look for how far that is from the end of the track to compare it to the length of the intro of the next track.
Fig. 8: Here the outro is approximately 30 seconds long. However, the analyzer placed the outro end point before the end of the track, so the outro is actually a little bit shorter than 30 seconds. Without marking the outro start point, you would have to do some math in your head to find exactly how long the outro is.
12.8 Auto DJ

Fig. 9: Mixxx library - Auto DJ view

Auto DJ allows you to automatically load tracks from the Auto DJ playlist when the current track is nearly finished, and crossfade into it. See *Auto DJ - Automate your mix*.

Auto DJ does not take into account the volume of each track, nor the frequency content, nor the rhythms, so it's not intended to be a replacement for a human DJ. However, it is good enough to give a human DJ a break without a major disruption to the mix.

12.8.1 Loading tracks into Auto DJ

To play tracks automatically, they must first be loaded into the Auto DJ playlist. The Auto DJ playlist is empty by default.

There are several ways to load tracks into the Auto DJ playlist:

- Select single or multiple tracks from the library, a regular playlist or crate and drag them to the Auto DJ icon on the left.

- Select a regular playlist or crate, right-click with the mouse and select *Add to Auto DJ* from the mouse menu. This adds all tracks to Auto DJ.

- While in the Auto DJ view of the library, drag tracks from external file managers to the Auto DJ icon in the sidebar or to the Auto DJ track table on the right.
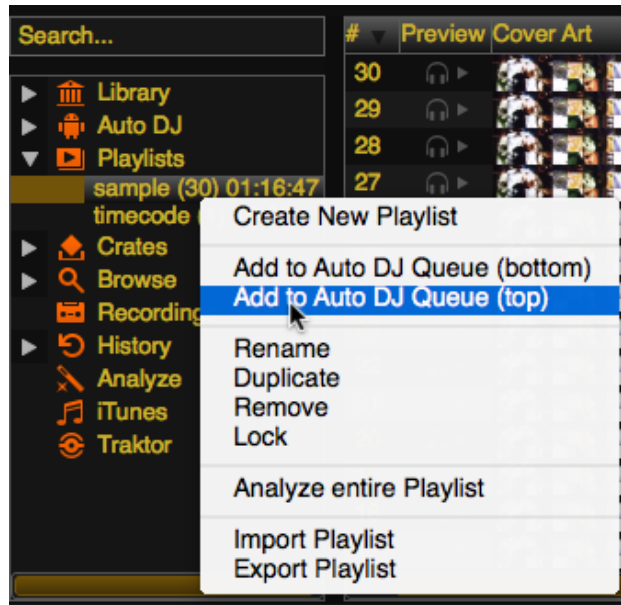

Fig. 10: Mixxx library - Adding a playlist to Auto DJ

12.8.2 Automatically adding tracks from crates

Instead of inserting the contents of the crates directly into the Auto DJ playlist, *Auto DJ crates* are associated crates that become a source of random track selections.

- **Add a crate to the Auto DJ track sources**: Expand the *Auto DJ* item in the sidebar, and right-click on the *Crates* sub-item. Select one of the existing crates from the list. This makes the content of the crate available for random selection into the *Auto DJ* queue for automatic mixing. The name of the crate is now listed as sub-item below.

  If you do not have any crates available for selection in the list, go and create a crate first and add some tracks, see *Crates - Organizing tracks into collections*.

- **Manually add tracks from track sources to Auto DJ**: Click the *Auto DJ* item in the sidebar and switch to the Auto DJ view of the library. Click the *Add random* button to add one track at the time from Auto DJ track sources to the bottom of the Auto DJ playlist.

Note: If you did not set any crates as an Auto DJ track source, clicking the *Add Random* button will add a randomly selected track from the whole library instead.

- **Automatically add tracks from track sources to Auto DJ**: Mixxx can randomly add tracks to the Auto DJ playlist from track sources as soon as a specified minimum number of tracks remain. Select *Preferences ▸ Auto DJ ▸ Enable random track addition to queue ▸ On*. Set *Minimum allowed tracks before addition* to change the minimum number of tracks after which random tracks may be added.

Note: If you did not set any crates as an Auto DJ track source, tracks are selected from the whole library instead.

- **Remove a crate from the Auto DJ track sources**: Expand the *Auto DJ* item in the sidebar, and right-click on one of the crates listed below the *Crates* sub-item. Select *Remove Crate as Track Source* to remove the crate from the Auto DJ track sources.

12.8.3 Playing tracks in Auto DJ

Now that you have loaded tracks into the Auto DJ playlist, you can activate Auto DJ as follows:

- Click on the *Auto DJ* icon in the sidebar to switch to the *Auto DJ* view of the library.

- Click the *Enable Auto DJ* button.

- The first tracks from your list are loaded into the decks and the playback starts.

- Mixxx will continue to automatically mix until the Auto DJ playlist is empty.

- Click the *Disable Auto DJ* button to stop the automatic mixing

---

Hint: You can add a track to the end of the Auto DJ playlist once it is played instead of removing it. Set *Preferences ▸ Auto DJ ▸ Re-queue tracks after playback ▸ On*.

12.8.4 Auto DJ Mix Modes

Auto DJ has several modes it can use to mix tracks:

- Full Intro + Outro

- Fade At Outro Start

- Full Track

- Skip Silence

The Full Intro + Outro and Fade At Outro Start modes both use the intro and outro cues but the Full Track and Skip Silence cues do not.

Full Intro + Outro and Fade At Outro Start

The Full Intro + Outro and Fade At Outro start Auto DJ modes use the *intro & outro cues* to determine how long to crossfade and how to align the tracks in time. In both modes, Auto DJ compares the duration of the outro of the old track and the intro of the new track. Auto DJ picks the time of the shorter section as the crossfade time.

In both modes, if the outro is shorter than the intro, Auto DJ will align the start of the outro with the start of the intro.

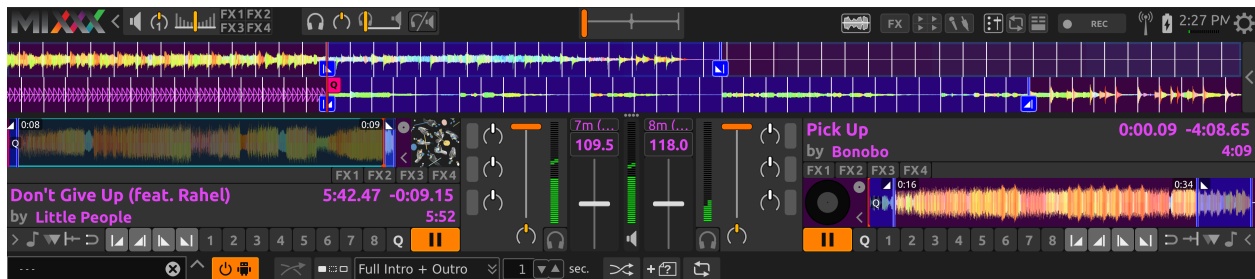

Fig. 11: Intro and outro start markers aligned by Auto DJ

The two modes work differently when the outro is longer than the intro.

Full Intro + Outro Mode
The full length of both the intro and the outro are always played. When the outro is longer than the intro, Auto DJ

---

aligns the end of the intro and outro by starting the next track during the outro of the previous track. This mode is the most likely to sound good with the widest variety of tracks. Therefore, it is the default mode.

Fig. 12: Intro and outro start cues aligned by Auto DJ in Full Intro + Outro mode

Fade At Outro Start

Auto DJ always aligns the start of the intro and outro. When the outro is longer than the intro, Auto DJ cuts off the end of the outro. This can be helpful if you want to prevent the energy of the mix from declining during a long outro. However, the transition may sound abrupt if the intro is short.

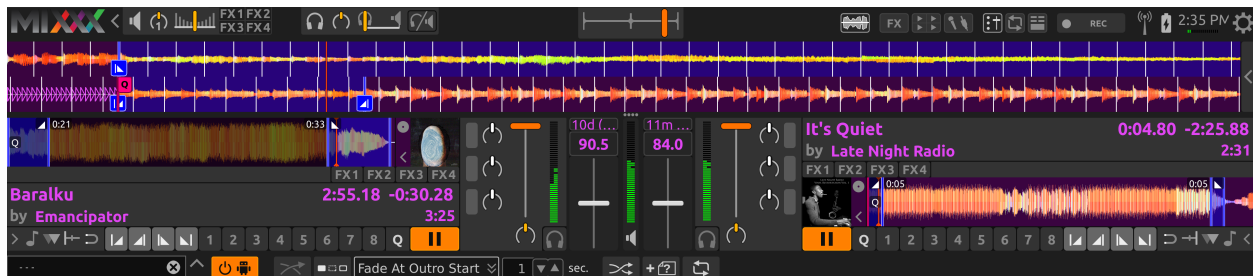

Fig. 13: Intro and outro start cues aligned by Auto DJ in Fade At Outro mode

Full Track and Skip Silence

The Full Track and Skip Silence Auto DJ modes do not use the intro and outro cues. They crossfade tracks over a number of seconds that you specify in the box next to the mode selection menu. The Full Track mode plays the entire length of every file. The Skip Silence mode works the same way but automatically cuts out silence at the beginning and ends of tracks (defined as when the signal first goes above or below -60 dBFS).

Hint: If you still want to use Auto DJ like a normal music player application, use one of these modes with a transition time of 0 seconds.

PREFERENCES

Mixxx has many options to customize in *Options ▸ Preferences*.
13.1 Sound Hardware

Fig. 1: Mixxx Sound Hardware Preferences

To achieve the best performance with Mixxx it is essential to configure your *audio buffer*, *sample rate*, and *audio API*. These three factors largely determine Mixxx's responsiveness and reliability. The optimal settings will vary based on your computer and hardware quality.

For information about the different input and output options, refer to *Configuring sound input and output*. The *DJ Hardware* chapter explains different types of DJ hardware and how to set them up with the input and output options. If you are using a microphone, refer to the *Using Microphones* chapter.

13.1.1 Audio Buffer

The audio buffer is the amount of audio in milliseconds that Mixxx processes at a time. This is a major factor that determines the latency between changing controls in Mixxx such as moving the *crossfader* or pressing the play button and hearing the audio change. For example, with an audio buffer of 23 ms, it will take approximately 23 milliseconds for Mixxx to stop the audio after you toggle the play button. The actual latency will be longer depending on a variety of factors.

The audio buffer setting determines how quickly your *operating system* expects Mixxx to react. A smaller audio buffer means Mixxx will be more responsive, but requires a faster CPU and quality audio interface. Setting your audio buffer too small may be too much for your computer and audio interface to handle. In this situation, Mixxx playback will be choppy and very clearly distorted as your system will not be able to keep up with how frequently Mixxx is trying to process audio. It is recommended to set your audio buffer as small as your system can handle reliably without glitches. Experiment with different audio buffer sizes to find what works for your system.

An audio buffer between 23-64 ms is acceptable if you are using Mixxx with a keyboard/mouse or a controller. An audio buffer below 10 ms is recommended when vinyl control is used because Mixxx will feel unresponsive otherwise.

The Adjusting Audio Latency page on the Mixxx Wiki has tips for different operating systems that may help you use a smaller audio buffer reliably.

> **Warning:** Your system may glitch only occasionally if you have your audio buffer set a little too low. This will happen at unpredictable times and you may not notice if you are only doing brief tests of each audio buffer size. When you think you have found a good buffer size for your system, play with Mixxx for at least a half hour before performing to ensure no glitches happen.

13.1.2 Sample Rate

The sample rate setting in Mixxx controls how many samples (chunks of audio) per second are produced by Mixxx. This determines the maximum frequency in Mixxx's signal, which is half the sample rate. Humans can only hear up to 20 kHz, so there is generally no need to use more than a 44.1 kHz (44100 Hz) sample rate for playback. Most music is published with a 44100 Hz sample rate, and playing music in a different sample rate than the audio file slightly reduces sound quality.

> **Warning:** A sample rate of 96 kHz gives your computer less than half the time to as to do the same processing. Increasing the sample rate will increase CPU usage and likely raise the minimum audio buffer size you can use reliably.

13.1.3 Sound API

The Sound *API* that Mixxx uses is the method by which Mixxx talks to your *operating system* in order to deliver audio to your audio interface. Your choice of Sound API can drastically affect Mixxx's performance on your computer. **Therefore it is important to take care to choose the best Sound API available to you.**

Windows

The following Sound APIs are available on Windows:

- **ASIO**: Good

- **WDM-KS**: Good

- **WASAPI**: Acceptable

- **DirectSound**: Poor

- **MME**: Poor

It is best to use the ASIO Sound API that bypassses the sound processing of the Windows kernel. Using ASIO requires a driver for your audio interface from the manufacturer. Check the manufacturer's website to see if a driver download is available. Soundcards designed for musicians almost always have an ASIO driver available, but audio interfaces built into computers and very cheap audio interfaces typically do not have an ASIO driver. If there is no ASIO driver available for your audio interface, use the WDM-KS API. There is generally no advantage to using ASIO4ALL, a wrapper around the WDM-KS API.

GNU/Linux

The following Sound APIs are available on GNU/Linux:

- **ALSA**: Good

- **JACK**: Good

- **OSS**: Acceptable

ALSA is the simplest sound API to configure. Using ALSA will prevent any other programs from using the audio interface(s) that Mixxx is using.

JACK allows you to route audio between JACK-compatible applications in flexible ways and output sound from multiple programs at the same time. However, JACK can be complicated to set up. Unless you will be connecting Mixxx to other JACK-compatible applications, JACK offers no advantages over ALSA. To use JACK, start the JACK daemon *before* running Mixxx. Otherwise JACK will not appear as a Sound API in the preferences.

Most modern GNU/Linux distributions use PulseAudio by default. When launched from a GUI menu entry or icon, Mixxx suspends PulseAudio while it is running so that Mixxx can use ALSA directly. Like JACK, PulseAudio allows multiple programs to access one audio interface, but PulseAudio and JACK have opposite design goals. PulseAudio is designed to make ordinary computer usage such as watching videos online and listening to music easy whereas JACK is designed for demanding low latency audio programs like Mixxx. It can be difficult to setup JACK and PulseAudio to work well together. So, unless you already use JACK, it is easiest to let Mixxx suspend PulseAudio and use ALSA.

If the PulseAudio plugin for alsalibs is installed on GNU/Linux, you can choose the virtual device `pulse`. This allows Mixxx to share the default system audio interface with other media players. This only works if you start Mixxx without pasuspender, which you can do by running **mixxx** from a console rather than clicking the launcher icon in a menu or on your desktop. Since the sound stream is routed from ALSA to Pulse and back to ALSA, this adds an additional latency of ~2 x the selected audio buffer size.

OSS is an Sound API that predates ALSA. Few modern audio interfaces have OSS drivers.

macOS

CoreAudio is the only Sound API on macOS.

13.1.4 Other Sound Hardware options

- **Multi-Soundcard Synchronization**: Mixxx is able to use two or more *audio interface* at a time, each with its own clock. When multiple audio interfaces are in use, the Mixxx engine is driven by the main output audio interface. Here you can select the synchronization used for the other audio interfaces to avoid buffer overflows or underflows.

- **Keylock/Pitch-Bending Engine**: This allows you to select the engine used for independent tempo and pitch changes (e.g. *key lock*). Use *Soundtouch* on lower power machines (such as netbooks) or if you experience buffer underflows while using *key lock*.

- **Main Mix**: You may disable the main mix to reduce Mixxx's CPU usage if you do not use the *main output*, recording or live broadcasting.

- **Main Output Mode**: In Mono mode, the left and right channel are combined into a mono signal which is passed to both channels of your main audio interface. This is useful for setups where the audience cannot hear your mix in stereo because of speaker placement or playing in a space with lots of reverberation.

- **Buffer Underflow Count**: Underflows (data is not available when needed) indicate that some of the subsystems in Mixxx can't keep up with real-time deadlines imposed by the current audio buffer size. This is useful to tune the latency settings. If the counter increases, then increase your audio buffer size, decrease the sample rate setting or change the sound API setting if available.

13.1.5 Output and Input Devices

In the usual, basic 'Digital DJ' setup (*Laptop and MIDI or HID Controller* or *Laptop and External USB Audio Interface*) all that needs to be configured are the Master and Headphones outputs. Though, there are many more output and input channels available for more complex setups, for example with external mixers, vinyl control or for broadcasting.

All outputs are usually sent to a channel pair (stereo), though they can also be sent to one channel only (mono mixdown), for example if you're short on output channels, like when you need to use one stereo output for both master and headphones (see *Laptop and Splitter Cable*).

Inputs can be mono or stereo (matching plugged sources, of course), except vinyl control inputs which require stereo to capture the entire control signal.

Outputs

- **Master** (Main): The mix of all audible channels, e.g. main decks, all samplers, enabled microphones and auxiliary inputs.

- **Headphones**: All channels for which *pfl* is enabled, as well as the preview deck.

- **Booth**: Basically the same output as Main to be routed to a separate output, for example for the speakers in the DJ booth, external recording device, loopback device for video recordings etc.

- **Left Bus**: All decks, samplers and auxiliaries that are assigned to the left side of the *crossfader*.

- **Center Bus**: All decks, samplers and auxiliaries that are assigned to the center of the *crossfader*.

- **Right Bus**: All decks, samplers and auxiliaries that are assigned to the right side of the *crossfader*.

- **Deck 1-4**: Separate outputs for each of the main decks.

Inputs

- **Vinyl Control 1-4**: Inputs to be used for *vinyl control and passthrough*. Note that one input can be selected for multiple decks.

- **Microphone 1-4**: The *microphone* inputs.

- **Auxiliary 1-4**: Auxiliary inputs.

- **Record/Broadcast**: The input used for the Mixxx-internal *recording* and *broadcasting*. Note that when setting this input your recording and broadcast stream will not be identical to the main output.

13.2 Library

13.2.1 Changing music directories

You can manually add, relink, and remove Mixxx music directories in *Preferences ‣ Library*.

Add a new music directory

Mixxx handles multiple music library folders. Click *Add* to browse to a directory where your music is stored. Mixxx will watch this directory and its subdirectories for new tracks.

If you add a directory that is already in your library, or you are currently *rescanning your library*, the operation is canceled.

Directories can also be added from the *Computer* sidebar item inside the library.

Relink a existing music directory

If an existing music directory is moved or renamed, Mixxx doesn't know where to find the audio files in it. The tracks will still show in library but they can't be loaded on decks and the tracks will become missing after the library is rescanned.

To relink the music directory, go to *Preferences ‣ Library*, click *Relink* to select the music directory in its new location. This will re-establish the links to the audio files in the Mixxx library.

Click *Library ‣ Rescan Library*, this will update the tracks and cause them to show up again in the library, check the location column in the library and you should see that it now points to the new music directory.

The playlists, crates, history and all track data like cue points, rating, comments etc. are preserved after relinking the library, the tracks are also not re-analyzed as the cached analysis is reused. You can confirm this by checking the *Key* and *BPM* columns to see if there is a key and BPM for every track.

Note: It is recommended to take a backup of your Mixxx configuration files before moving or renaming music directories used in Mixxx. For locations in each supported *OS* as well as detailed descriptions of all settings files, go to *The Mixxx Settings Directory*.

Remove a music directory

Click *Remove*, and Mixxx will no longer watch a directory and its subdirectories for new tracks, and asks what would you like to do with the tracks from these directories.

- Select *Hide Tracks* to hide all tracks from this directory and subdirectories.

- Select *Delete Track Metadata* to delete all metadata for these tracks from Mixxx permanently

- Select *Leave Tracks Unchanged* to leave the tracks unchanged in your library.

Hiding tracks saves their metadata in case you re-add them in the future.

Metadata means all track details (artist, title, playcount, etc.) as well as beatgrids, hotcues, and loops. This choice only affects the Mixxx library. No files on disk will be changed or deleted.

Hint: When changing music directories, you might want to run a library rescan afterwards. Select *Library ‣ Rescan Library* in the menu.

13.3 Colors

13.3.1 Selecting Palettes and Default Colors

Track/Hotcue Palette
> It is possible to assign colors to tracks and *hotcues* to highlight them. Mixxx offers a selection of different palettes that you can choose colors from.
>
> You can also make your own palette by clicking the *Edit* button next to the palette name. This will open a the *palette editor*.

Default Hotcue Color
> It is possible to either select a single color from the current hotcue palette that will be assigned to all newly created hotcue colors, or select the *By hotcue number* option. The latter will automatically assign a color from the palette to new hotcues based on the hotcue number.

13.3.2 Editing Palettes

The palette editor allows you add, modify, reorder and remove colors in a color palette and save it under a new name. You can also delete custom palettes.

To modify a color, double-click it to open the color picker window.

When editing the hotcue palette, the palette editor also allows assigning a specific default color to a hotcue number. This setting is honored when *Hotcue default color* is set to *By hotcue number*.

That makes it possible to assign just a few distinct colors to your hotcues automatically, but still have more colors available in the palette in case you want to override the color manually.

For example, if you have a color palette consisting of 4 colors, and you configure the palette to assign the first color to hotcue 1 and the third color to hotcue 2, then hotcue 1 will use the first color and hotcue 2 will be assigned the third color. The colors will repeat when setting a hotcue with a number greater than those used in the palette. In the example above, hotcue 3 will use the first color and hotcue 4 the second color, and so on.

You can also assign the same color to more than one hotcue. For example by separating the hotcue numbers with a comma ("2, 4, 7"), expressing a range of numbers ("1 - 3") or any combination of that ("6, 1 - 3, 7").

If no color in the palette has a hotcue number assigned to it, new hotcues will use the color at the same index from the palette (i.e. hotcue 1 will be assigned the first color in the palette, hotcue 2 uses the second color in the palette, etc.).

13.3.3 Replacing Hotcue Colors

Sometimes it's necessary to bulk replace colors of existing hotcues in your library. Instead of changing the color of every single hotcue manually, you can *Replace* to open the cue color replace dialog.

In addition to selecting the new color, you may set conditions that determine which hotcues the new color will be assigned to. If you tick both checkboxes, the new color will only applied if both conditions match.

13.4 Beat Detection

Mixxx uses an ultra-precise BPM and beat detector. Manual adjustments are redundant in many cases because Mixxx knows where the beats are.

BPM and beat detection is a complex operation. Depending on your computer and the track's bitrate and duration this may take some time. By default Mixxx analyzes the complete track. To accelerate beat detection on slower computers, a "Fast Analysis" option is available. If enabled, the BPM is computed by analyzing the first minute of the track. In most cases this does not affect the beat detection negatively because most of today's dance music is written in a 4/4 signature with a fixed tempo.

Fig. 2: Mixxx preferences - BPM settings

The table below summarizes the beat detection settings:

Option	Description
Enable Fast Analysis	If enabled, BPM will be detected by only using the first minute of audio.
Assume constant tempo	If enabled, Mixxx assumes that the distances between the beats are constant. If disabled, the raw beat grid obtained by the analyzer is presented. The latter is appropriate for tracks with variable tempo.
Enable Offset Correction	Prevents beat markers from being placed incorrectly.
Re-analyze beats when settings change or beat detection data is outdated	If enabled, Mixxx over-writes old beat grids from prior versions. Moreover, it will re-analyze the BPM if your beat detection preferences change or BPM data from 3rd party programs are present.

13.4.1 Correcting Beat Grids

There may be situations where BPM and beat detection do not result in a proper beat grid.

Typically, the detected BPM is correct but the analyzer has failed to detect the location of the first beat. Consequently, the beat markers are shifted, i.e. the beat markers are a fixed distance from the true beat. To adjust the beat grid, cue the track before a real beat and click the *Beat-grid Adjust* button in the *Deck Options Button Grid*.

If the detected BPM is not accurate, the corresponding beat grid will also be inaccurate. A deviation of 0.02 BPM units from the correct BPM will cause beatgrid alignment issues on long tracks (e.g. a club mix). If this happens, your beatgrid may look aligned for the few minutes but you will notice a slight drift as the song goes on. Finding the correct BPM is easy in many cases - just follow the note below.

Note: If the detected BPM value is not sufficiently accurate but very close to an integer value, try to set the BPM value manually to the integer.

For more granular adjustments there are beatgrid controls close to the *Waveform Displays* of each deck in the main interface.

13.5 Key Detection

Mixxx comes with a high precision musical key detector to help you make smooth mixes by ensuring that your tracks are musically compatible.

13.5.1 Analyzer Settings

Key detection is a complex operation. Depending on your computer and the track's bitrate and duration this may take some time. By default Mixxx analyzes the complete track. To accelerate key detection on slower computers, a "Fast Analysis" option is available. If enabled, the key is computed by analyzing the first minute of the track.

The table below summarizes the Key detection settings:

| Option	Description
Enable Fast Analysis	If enabled, the key will be detected by using only the first minute of audio.
Re-analyze key when settings change or Key detection data is outdated	If enabled, Mixxx will re-analyse tracks if you select a different key detection plugin or the key was generated by a program other than Mixxx.
Key Notation	Change the way keys are displayed in the library.
Fig. 3: Mixxx preferences - Key settings

13.6 Equalizers

Preferences ‣ Equalizer allows you to setup the equalizers.

- **Equalizer Rack**: The Equalizer Rack is a special effect rack that is connected to the deck's equalizer and filter controls.

  In this section you can select the equalizers and quick effects that are used with the decks.

- **Equalizer Plugin**: Here you can select the effect that is used as the mixing EQ in each deck. By default only built-in equalizers are displayed. Unchecking *Only allow EQ knobs to control EQ specific effects* allows you to select any other effect.

- **Quick Effect**: Here you can select the effect that is controlled by the dedicated filter knob in each deck. By default only built-in filter effects are selected for all decks, but that can be changed as above.

- **High/Low Shelf EQ**: This slider sets the crossover frequencies of the mixing EQ. It controls which frequency range is affected by the low, mid, and high channel EQ knobs. By default the low knob controls the bass and sub bass range up to 246 Hz. The mid knob controls the mid range up to 2.5 kHz. The remaining treble range is controlled by the high knob.

- **Master EQ**: This section allows you to setup an EQ that affects the term:*main output*.

13.6.1 Mixing Equalizers

Mixxx offers three types of mixing equalizers with a full kill option. These equalizers are "isolators", adapted from analog crossover networks. Each EQ is combination of a high shelf filter, a band pass filter, and a low shelf filter. Each EQ type has a unique sound, so try them out to find out which one you prefer.

The Bessel EQs with Lipshitz and Vanderkooy Mix (LV-Mix) do not alter the sound or take any processing time when their knobs are in the center position. They activate once you adjust an EQ knob.

The Linkwitz-Riley EQ on the other hand always applies a minimum, natural sounding phase shift to the sound. Their processing time does not change when you adjust the EQ knobs.
Fig. 4: Equalizer Preferences

The following table compares some technical parameters:

Type	cut	roll-off	phase shift	bit perfect	CPU usage
Bessel4 LV-Mix	soft	-24 db/Oct	linear	yes	low
Bessel8 LV-Mix	medium	-48 db/Oct	linear	yes	medium
Linkwitz-Riley	sharp	-48 db/Oct	minimum	no	high

- cut: the frequency response (curve form) at the cross over frequency.

- roll-off: The steepness of the EQ bands.

- linear phase: No phase distortion, all frequencies are processed with the same group delay.

- minimum phase: A natural phase distortion, the group delay changes by the frequency.

- bit perfect: Whether the EQ leaves the original samples untouched when the EQ is at unity.

- CPU usage: Processing time needed to calculate the EQ output.

FOURTEEN

ADVANCED TOPICS

14.1 Adding support for your MIDI/HID Controller

With several dozens of DJ controllers supported out-of-the-box, Mixxx gives you comprehensive hardware control for your DJ mixes, see *Using MIDI/HID Controllers*.

Support for additional devices can be added to Mixxx by creating a new mapping file. This file tells Mixxx how to translate, or map, *MIDI*/*HID* messages from a controller into commands that Mixxx understands.

You can download and share custom controller mappings in the Mixxx User Controller Mapping forums.

For a list of controls that can be used in a controller mapping, see *Mixxx Controls*.

14.1.1 Controller Wizard
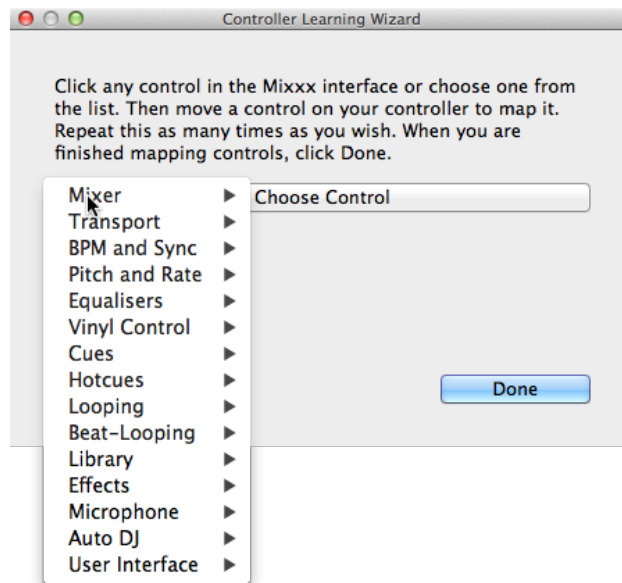

Fig. 1: Mixxx Controller Wizard - Mapping a control

By far, the easiest way to create a new MIDI mapping is by using the Controller Wizard.

1. Connect your controller(s) to your computer

2. Start Mixxx

3. Go to *Preferences ▸ Controllers*

4. Select your device from the list of available devices on the left, and the right pane will change

5. Activate the *Enabled* checkbox

6. Click on *Learning Wizard* to open the selection dialog

7. Click any control in the Mixxx *GUI*

8. Alternatively, click the *Choose Control* button and choose one from the selection list

9. Push *Learn* and then move a control or push a button on your controller to map it. You can also move a control without pushing the *Learn* button if you are learning many controls.

10. If you are learning a button, just push it once. If you are learning a knob or a slider, try to move it throughout its range.

11. After Mixxx detects the control, you may click *Learn Another* or you can click on another button in the Mixxx *GUI* to learn another control.

12. When you are finished mapping controls, click *Done*

There are also some advanced options in the Midi Wizard you may need to use:

- Soft Takeover: Use this option for knobs or sliders to avoid sudden jumps in when the knob in the *GUI* doesn't match the physical knob. If you select this option, you won't be able to perform super-fast motions as easily. (Recommended off)

- Invert: Use this option for controls that you want to work backwards from how they were detected.

- Switch Mode: Use this option on controllers that have controls that act like switches and emit one value on the first press, and a different value on the next press. (Think an actual hardware toggle switch, or a button that lights up on the first press and turns off on the second press).

- Jog Wheel / Select Knob: Use this for knobs that don't have a beginning or an end, but spin continuously.

The Controller wizard saves the new mapping to the `controllers` directory in the user settings directory, see *The Mixxx Settings Directory*.

You can then modify the XML file it creates (or any of the ones that ship with Mixxx) if you'd like to fine-tune it or add more mappings. For more information, go to https://github.com/mixxxdj/mixxx/wiki/MIDI-Controller-Mapping-File-Format.

The Controller Wizard works only for *MIDI* devices. Currently you can't map modifier (shift) keys and platter rotations. Use *MIDI Scripting* instead.

14.1.2 MIDI Scripting

In order to support the advanced features of many *MIDI*/*HID* controllers, Mixxx offers what we call MIDI Scripting.

It enables MIDI controls to be mapped to QtScript (aka Javascript/EMCAScript) functions stored in function library files, freeing Mixxx from a one-to-one MIDI mapping ideology. These user-created functions can then do anything desired with the MIDI event such as have a single controller button simultaneously affect two or more Mixxx properties ("controls"), adjust incoming control values to work better with Mixxx (scratching), display a complex LED sequence, or even send messages to text displays on the controller.

For more information, go to https://github.com/mixxxdj/mixxx/wiki/Midi-Scripting and https://github.com/mixxxdj/mixxx/wiki/Hid-Mapping , as well as the Comonents-JS library which greatly simplifies mapping, for example effect units and complex behaviour like switching deck layers or pad grid modes. Note that this is the preferred way of mapping if intended your mapping to be included in Mixxx since Components-JS significantly reduces effort for both mapping and reviewing Pull Requests.

14.2 Making a Custom Keyboard Mapping

The *default keyboard mappings* are defined in a text file which can be found at the following location:

- Linux: `/usr/local/share/mixxx/keyboard/en_US.kbd.cfg`

- macOS: `/Applications/Mixxx.app/Contents/Resources/keyboard/en_US.kbd.cfg`

- Windows: `<Mixxx installation directory>\keyboard\en_US.kbd.cfg`

Depending on your system's language settings, Mixxx might use a different file as default, e.g. `de_DE.kbd.cfg` for German or `es_ES.kbd.cfg` for Spanish.

It is not recommended that you modify the system-wide keyboard mapping file because all your changes may be lost if you uninstall or upgrade Mixxx. Instead, copy the default mapping file to the following location:

- Linux: `~/.mixxx/Custom.kbd.cfg`

- macOS: `~/Library/Containers/org.mixxx.mixxx/Data/Library/Application Support/Mixxx/Custom.kbd.cfg`

- Windows: `%LOCALAPPDATA%\Mixxx\Custom.kbd.cfg`

Then edit this file and save the changes. On the next startup, Mixxx will check if `Custom.kbd.cfg` is present and load that file instead of the default mapping file. This has the advantage that you can always revert back to the default mapping by deleting `Custom.kbd.cfg`.

For a list of controls that can be used in a keyboard mapping, see *Mixxx Controls*.

You can download and share custom keyboard mappings in the Mixxx User Keyboard Mapping forums.

14.3 Additional Effects via external Mixer Mode

Mixxx comes with a set of *native effects*. Additionally, using the *external mixer mode* you can route each deck directly to 3rd party effect hosts.

The following examples are only intended to encourage experimentation, they are not definitive guidance.

14.3.1 Effects via AU Lab on macOS

On macOS there is a simple and free way to give Mixxx access to the collection of AU/VST/MAS plugins that are installed on your system.

- Install the free SoundflowerBed, a system extension for inter-application audio routing.

- Install the free digital audio mixing application AU Lab.

Hint: macOS 10.15 (Catalina) introduces additional restrictions on running non-Apple software. Make sure to grant permission in *System Preferences –> Security & Privacy –> Microphone –> AU Lab*.

Alternatively, try Blackhole, a modern virtual audio driver that allows applications to pass audio to other applications with zero additional *latency*, and Hosting AU, a free micro-sized *DAW* that hosts Audio Unit instruments and effect plugins.

In Mixxx

- Go to *Preferences ‣ Sound Hardware ‣ Output*

- Select for *Deck 1* the *Soundflower 16* device with *Channel 1-2*

Fig. 2: The Au Lab routing for external effects on macOS

- Select for *Deck 2* the *Soundflower 16* device with *Channel 3-4*
- Click the *Apply* button

In AU Lab

- Click on the + button to create a new configuration
- Add 2 stereo input tracks in the *Audio Input Tab*
- Add 2 stereo output tracks in the *Audio Output Tab*
- Click *OK*
- Change the audio input device to *Soundflower 16*
- Change the audio output device for example to *Built-in Output*
- Click *Create document*
- In the *Output 1* channel, select an effect from the drop-down menu, for example *Apple ▸ AUCompressor*

The effect should now react if you play a track in Mixxx.

14.3.2 Effects via JACK Rack on GNU/Linux

Use Jack to route each deck directly through JACK Rack effect racks, or for more control you can use Ardour (or another *DAW*) using sends for effects. This gives Mixxx access to the extensive collection of *LADSPA* plugins.

Make sure the correct multichannel audio interface has been selected in Jack (Jack settings visible bottom left). Note that Mixxx possibly labels its Jack ports as *Portaudio*.
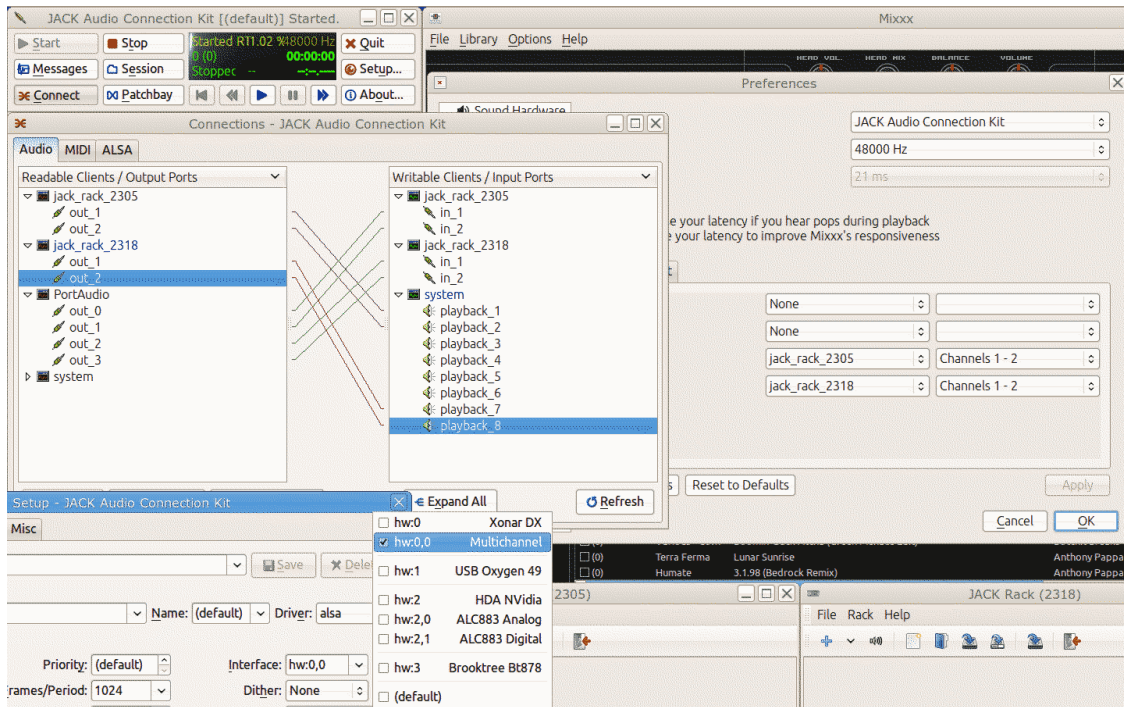

Fig. 3: The Jack routing for external effects on GNU/Linux

14.4 Migrate your Mixxx library and settings to a new computer

If you move to a new computer, or to another operating system on the same computer, you can take your existing Mixxx setup with you. This includes your track library, settings, controller mappings and broadcast profiles.

You don't necessarily need to be able to run your previous Mixxx installation, all you need is your *settings directory* and the music directories you imported into your Mixxx library via *Preferences ▸ Library*.

14.4.1 Preparation

- If you still have access to your Mixxx installation open Mixxx, go to *Preferences ▸ Library* and uncheck *Rescan on startup*. If you are not able to start Mixxx anymore, e.g. if you only managed to recover your settings directory, you can do this manually in the settings file: open `mixxx.cfg` with a text editor, delete the line with `RescanOnStartup` and save the file.

- Make a copy of both the Mixxx settings directory and your music directories. Put all in a save place. **Do not restructure your music directories!**

- Install your new operating system, get your new PC ready.

- Get the current stable Mixxx version from the official download page.

- Install Mixxx, though **don't run it, yet!**

14.4.2 Migration

- Copy your Mixxx settings directory to the appropriate location, see *The Mixxx Settings Directory*. In case you already started Mixxx previously, make sure to rename or delete your existing settings directory in order to avoid any file conflicts.

- Copy your music directories to the new computer.

- Start Mixxx.

- If you've put the settings directory in the correct location Mixxx should not ask you for your music directories and all your settings should be as before.

- Go to *Preferences ‣ Library* and **Relink** each of your music directories as described in *Changing music directories*.

Now, all your music files should be available, all your playlists, crates and your session histories be restored. A library rescan is not required. Configure a sound output and test if you can play all tracks as before. Note that this will obviously not include your external libraries (iTunes, Traktor etc.), you need to configure those again.

14.4.3 Known issues

If you migrated to another operating system, operating system version or another Mixxx version, the used audio decoders may have changed which may cause beatgrids and cue points to appear shifted, i.e. they are set off from the desired points in the audio stream. Unfortunately, there is no automatic fix available, yet. As of now you need to shift cues for each track individually with the cue shift buttons in the beatgrid editing controls section, see *Waveform Displays*.

CONTRIBUTING TO THE PROJECT

Mixxx is a community-driven project involving many DJs worldwide. Without the contributions from these DJs, Mixxx would not exist, and we're constantly looking for more contributors.

We want to make it as easy as possible for people to get involved in Mixxx development. First off, to be clear **you don't have to be a programmer to contribute**.

15.1 As a non-developer

- Donate to Mixxx using Paypal to help support and enhance development.

- Make skins

- Make MIDI mappings for your controller

- Report bugs

- Update our Wiki to make sure the information on it is up to date.

- Translate Mixxx using Transifex

- Answer questions on the Help & Support Forum

- Help promote Mixxx: If you've got a blog, write an article about Mixxx. Blog about our new releases when they come out. Any exposure on the web and in print helps our project grow, and is much appreciated.

- Send us some photos of you using Mixxx at a gig!

15.2 As a software developer

- You don't have to know C++. There are developers who got into Mixxx development while learning C++ along the way.

- Join our Zulip chat.

- Tell us your ideas! Email us, talk on *Zulip*, file wishlist *bugs*, or post on the forums.

- Register an account on our development platform Github and fork our code. See Using Git for Mixxx Development

- Get familiar with the code. Pick a bug off of the Easy Bug List

- Get help fixing the bug on *Zulip*, talk to us about the best way to do it.

Contributing to Mixxx in 3 Easy Steps:

1. Pick a bug off of the Easy Bug List

2. Talk to us on *Zulip* for help on how to fix it.

3. Fix it! *Done!* Your name will now be on the Mixxx contributor list.

APPENDIX

16.1 Keyboard mapping table

Shortcuts let you work more efficiently. This table lists the default keyboard shortcuts for accessing Mixxx with an English keyboard layout. Depending on your language settings the defaults may be different.

Mixer		
Crossfade Left	`G`	
Crossfade Right	`H`	
Small Crossfade Left	`Shift + G`	
Small Crossfade Right	`Shift + H`	
Microphone Talkover	`` ` ``	
	Deck 1	**Deck 2**
Activate/Disable Effects Unit	`5`	`0`
Headphone Cue (Pre-fader listen)	`T`	`Y`
Bass Kill	`B`	`N`

Playback	**Deck 1**	**Deck 2**
Load selected track to deck	`Shift + ←`	`Shift + →`
Unload track from deck	`Alt + Shift + ←`	`Alt + Shift + →`
Playback	`D`	`L`
Seek Backwards	`A`	`J`
Reverse Playback	`Shift + A`	`Shift + J`
Seek Forwards	`S`	`K`
Tempo Adjust Down	`F1`	`F5`
Tempo Adjust Up	`F2`	`F6`
Small Tempo Adjust Down	`Shift + F1`	`Shift + F5`
Small Tempo Adjust Up	`Shift + F2`	`Shift + F6`
Temporary Tempo Adjust Down	`F3`	`F7`
Temporary Tempo Adjust Up	`F4`	`F8`
Small Temporary Tempo Adjust Down	`Shift + F3`	`Shift + F7`
Small Temporary Tempo Adjust Up	`Shift + F4`	`Shift + F8`
Tempo (BPM) Sync	`1`	`6`
BPM Tap Tempo Adjust	`Shift + !`	`Shift + ^`

Cue and Loop	Deck 1	Deck 2
Set Cuepoint	`Shift + D`	`Shift + L`
Cue	`F`	`;`
Cue Go-to-and-stop	`Shift + F`	`Shift + :`
Activate 4 Beat Loop	`Q`	`U`
Halve Beat Loop Size	`W`	`I`
Double Beat Loop Size	`E`	`O`
Set Loop In Point	`2`	`7`
Set Loop Out Point (Activates Loop)	`3`	`8`
Toggle Loop On/Off	`4`	`9`
Set Hot cue 1	`Z`	`M`
Set Hot cue 2	`X`	`,`
Set Hot cue 3	`C`	`.`
Set Hot cue 4	`V`	`/`
Clear Hot cue 1	`Shift + Z`	`Shift + M`
Clear Hot cue 2	`Shift + X`	`Shift + <`
Clear Hot cue 3	`Shift + C`	`Shift + >`
Clear Hot cue 4	`Shift + V`	`Shift + ?`

Vinyl Control	Deck 1	Deck 2
Passthrough	`Ctrl + J`	`Ctrl + K`
Vinylcontrol Mode	`Ctrl + Shift + Y`	`Ctrl + Shift + U`
Vinylcontrol Cueing	`Ctrl + Alt + Y`	`Ctrl + Alt + U`
Single Deck Toggle / Swap Decks	`Ctrl + T`	

Library		
Maximize the library view	`Space`	
Load selected track to deck	`Shift + ←` (Deck 1)	`Shift + →` (Deck 2)
Select all files in current list	`Ctrl + A`	
Select group of files in current list	Click first item, hold `Shift` key, click last item	
Focus search bar	`Ctrl + F`	
Clear search input	`Ctrl + Back`	
Focus tracks table	`Escape`	
Trigger configured double-click action	`Return`	
Open track properties dialog	`Ctrl + Return`	
Remove or hide selected tracks	Windows/Linux: `Delete` macOS: `Command + Backspace`	

Preview Deck	
Load Selected Track And Play	`P`
Stop and go to start	`Shift + P`
Seek Backwards	`Alt + ←`
Seek Forwards	`Alt + →`

Auto DJ	
Shuffle Auto DJ playlist	`Shift + F9`
Skip next track in Auto DJ	`Shift + F10`
Fade to next track in Auto DJ	`Shift + F11`
Toggle Auto DJ on/Off	`Shift + F12`

See also:

Mixxx allows you to customize the keyboard shortcuts. For more information, and to download a keyboard mapping image, go to *Using a Keyboard*.

16.2 Application shortcuts

Use these shortcuts to access features available in the menu on top of the application window.

Function	Key
File menu	
Load Track to Deck 1	`Ctrl + O`
Load Track to Deck 2	`Ctrl + Shift + O`
Library menu	
Add new Playlist	`Ctrl + N`
Add new Crate	`Ctrl + Shift + N`
View menu	
Show Skin Settings Menu	`Ctrl + 1`
Show Microphone Section	`Ctrl + 2`
Show Vinyl Control Section	`Ctrl + 3`
Show Preview Deck	`Ctrl + 4`
Show Cover Art	`Ctrl + 6`
Maximize Library	`Space`
Full Screen (Windows & Linux)	`F11`
Full Screen (macOS)	`Shift + Command + F`
Options menu	
Enable Vinyl Control 1	`Ctrl + T`
Enable Vinyl Control 2	`Ctrl + Y`
Enable Vinyl Control 3	`Ctrl + U`
Enable Vinyl Control 4	`Ctrl + I`
Enable Live Broadcasting	`Ctrl + L`
Record Mix	`Ctrl + R`
Enable Keyboard Shortcuts	`Ctrl + ` `
Open Preferences (Windows & Linux)	`Ctrl + P`
Open Preferences (macOS)	`Ctrl + ,`
Exit Mixxx	`Ctrl + Q`
Developer menu	
Reload skin	`Ctrl + Shift + R`
Developer Tools	`Ctrl + Shift + T`
Stats: Base Bucket	`Ctrl + Shift + B`
Stats: Experiment Bucket	`Ctrl + Shift + E`
Debugger Enabled	`Ctrl + Shift + D`

Hint: The `Ctrl` key on Windows & Linux is equivalent to the `Command` key on macOS. The `Alt` key on Windows & Linux is equivalent to the `Option` key on macOS. Application shortcuts are not customizable.

Note: The Developer menu is available if Mixxx is started using the *Launching Mixxx from the Command Line*.

16.3 Launching Mixxx from the Command Line

To launch Mixxx using the command line:

Windows
> Locate the folder where Mixxx is installed and copy the file path. You can also obtain the file path by right clicking on the Mixxx icon and then choosing 'Properties'. Copy the path and paste it in terminal and add `\mixxx` at the end - everything should be inside quotes. Press Enter. The entire command will look like this

```
"C:\Program Files\Mixxx\mixxx"
```

macOS
> Similarly, for macOS, the command will be

```
/Applications/Mixxx.app/Contents/MacOS/mixxx
```

GNU/ Linux
> If Mixxx is in your system's search path (`$PATH`), you can just type

```
mixxx
```

16.3.1 Command line options

Mixxx is designed to be as user-friendly as possible. As such, its command line options are only useful for development or debugging, as they make these tasks easier. Command line options are case-sensitive.

To launch Mixxx with any of these command line options, simply append the option to the base command for your operating system. For example, to launch Mixxx in developer mode on Windows, type this in terminal

```
"C:\Program Files\Mixxx\mixxx" --developer
```

In addition to these options, it is possible to specify one or more music file(s) on the command line. These will be loaded at start-up. Each file you specify will be loaded into the next virtual deck. For a list of supported file types, go to *Compatible file formats*.

> **--resource-path PATH**   Top-level directory where Mixxx will look for its resource files such as MIDI mappings, overriding the default installation location.
>
> **--settings-path PATH**   Top-level directory where Mixxx will look for user settings files such as the library database and preferences configuration file.
>
> **--disable-vumetergl**   Do not use OpenGL vu meter
>
> **--controller-debug**   Log all controller data Mixxx sends and receives as well as scripts it loads.
>
> **--controller-abort-on-warning**   The controller mapping will issue more aggressive warnings and errors when detecting misuse of controller APIs. New Controller Mappings should be developed with this option enabled!
>
> **--developer**   Enable developer mode. Includes extra logs, stats on performance and the Developer tools menu as well as tooltips and logs useful for skin developers.
>
> **--safe-mode**   Disable OpenGL widgets (scrolling waveforms, spinnies) to work around GPU driver bugs. If Mixxx is crashing on startup, try using this.
>
> > • Automatically loads empty waveforms
> >
> > • Disables spinning vinyl widgets

- Disables synchronization polling

- Doesn't open controllers by default

--color <color>   [auto|always|never] Use colors on the console output.

--locale LOCALE   Use a custom locale for loading translations (e.g `fr`)

-f, --full-screen   Start Mixxx in full-screen mode.

--log-level LEVEL   Set the verbosity of command line logging.

Value	Meaning
`critical`	Critical/Fatal only
`warning`	Above + Warnings
`info`	Above + Informational messages
`debug`	Above + Debug/Developer messages
`trace`	Above + Profiling messages

--log-flush-level LEVEL   Set the logging level at which the log buffer is flushed to `mixxx.log`. LEVEL is one of the values defined at `--logLevel` above.

--debug-assert-break   Breaks (`SIGINT`) Mixxx if a `DEBUG_ASSERT` evaluates to false. A debugger can then be used to continue. This disables the `MIXXX_DEBUG_ASSERTIONS_FATAL` flag which can otherwise lead to a time consuming full rebuild.

-h, --help   Display this help message and exit

16.4 Developer tools

To start Mixxx in Developer mode with a custom resource directory with *MIDI* and *HID* logging enabled, type the following line into the terminal and hit return:

```
./mixxx --controller-debug --developer --resource-path res
```

16.4.1 Experiment modes for rapid development and testing

- Adds a static Experiment class with a tri-state mode flag that indicates whether the experiment mode is OFF, BASE, or EXPERIMENT.

- Adds *Developer ‣ Stats:Experiment Bucket* and *Developer ‣ Stats:Base Bucket*. Each one toggles between OFF and BASE/EXPERIMENT so you can choose exactly what time spans you would like to collect in your base and experiment buckets.

- Updates StatsManager to segment collected stats into a base and experiment bucket. This allows you to quickly measure the difference a code change has on relevant counters / timers within the same execution of Mixxx.

This is useful for quickly enabling and disabling a code change without a re-compile/re-run cycle to get an anecdotal sense of how it "feels" as well as a quantified sense of how it differs in terms of stats Mixxx collects.

All stats collected via the usual Counter/Timer/ScopedTimer/etc. tools are segmented into a BASE STATS and EXPERIMENT STATS section printed to the log on exit.

16.5 Mixxx Controls

Nearly every knob, button, or fader you see in Mixxx's interface is controllable via Mixxx's "control" system. The control system allows skins, *MIDI* controllers, *HID* controllers and keyboards to control Mixxx via a single interface.

A control is identified by a "group" (which is used for grouping associated controls) and a "key" (the name of the individual control).

For example, the volume fader for Deck 1 is identified by the group `[Channel1]` and key *volume*. Similarly, the volume fader for Sampler 1 is identified by the group `[Sampler1]` and key *volume*.

The group is used to collect all the controls that affect one component of Mixxx into one collection. Some groups have a high overlap of controls in common (e.g. samplers, decks, and the preview deck all share the same control keys).

In addition to controlling Mixxx, the control system can be used to inspect Mixxx's state. For example, the sample rate of the track loaded in Deck 1 can be accessed via the *`[Channel1],track_samplerate`* control. You can read the *`[Channel3],play`* control to determine whether Deck 3 is playing.

The default value range is 0.0 to 1.0, unless otherwise noted. Binary means that it is either 'ON' (non-zero) or 'OFF' (zero).

Hint: Discovering Controls used in Skins

You can view the control connected to any part of a skin by running Mixxx with the `--developer` command line option and hovering your mouse cursor over part of the skin. If no tooltip appears, enable tooltips for the Library and Skin in *Options ‣ Preferences ‣ Interface*.

Hint: Changing any control from the GUI in Developer Mode

When running Mixxx in Developer Mode (with the `--developer` command line option), you can view and manually set the state of any control in Mixxx by going to *Developer ‣ Developer Tools*.

Hint: Simplify mapping of more complex behaviour

While simple mappings with just a few buttons, knobs and LEDs can easily be created with the MIDI Wizard and some basic scripting, implementing more complex behaviour like switching deck layers or pad grid modes can be tedious and error-prone. For these cases you can use Mixxx' Comonents-JS library which provides building blocks for single controls as well as entire containers like decks and effect units.

See controlindex for a full list.

16.5.1 ControlPotMeter controls

The following extensions add some features to `ControlPotMeter` controls (volume, *crossfader*, ...). Use in conjunction with `[ChannelN]`, `[SamplerN]`, `[Master]`, ... groups.

Control Suffix	Description, example
`_up`	Increases the value, e.g. `[ChannelN],rate_perm_up` sets the speed one step higher (4 % default)
`_down`	Decreases the value, sets the speed one step lower (4 % default)
`_up_small`	Increases the value by smaller step, sets the speed one small step higher (1 % default)
`_down_small`	Decreases the value by smaller step, sets the speed one small step lower (1 % default)
`_set_one`	Sets the value to 1.0, sets the channel volume to full
`_set_minus_one`	Sets the value to -1.0, sets the channel volume to zero
`_set_default`	Input: sets the control to its default, return to default waveform zoom level
`_set_default`	Output: set to 1.0 if the control is at its default, light up the pitch fader center indicator
`_set_zero`	Sets the value to 0.0, put the crossfader in the middle again
`_toggle`	Sets the value to 0.0 if the value was > 0.0, and to 1.0 if the value was 0.0, will cut off/on a track while you're playing
`_minus_toggle`	Sets the value to -1.0 if the value was > -1.0, and to 1.0 if the value was -1.0, can tilt the crossfader from left to right

These controls can be used in JavaScript files like this:

```
// This won't work:
engine.setValue(group, "pitch_up_small", 1.0);

// Use this instead:
script.triggerControl(group, "pitch_up_small", 50);
```

To use `*_toggle` the respective shortcut for scripts is:

```
script.toggleControl(group, "keylock_toggle", 100);
```

16.5.2 The `[App]` group

The `[App]` group contains controls that do not belong to a specific channel, the mixer or the effects engine.

`[App]indicator_250ms`

> Alternates between 0.0 and 1.0 every 250 milliseconds.
>
> This control may be used to implement a blinking LED in JavaScript and is guaranteed to light up at the same time as `[ChannelN],cue_indicator` and `[ChannelN],play_indicator` when these are blinking (depending on the currently chosen *cue mode*).
>
> > **Range**
> > > binary, read-only
> >
> > **Feedback**
> > > None
>
> New in version 2.4.0.

`[App]indicator_500ms`

> Alternates between 0.0 and 1.0 every 500 milliseconds.
>
> This control may be used to implement a blinking LED in JavaScript and is guaranteed to light up at the same time as `[ChannelN],cue_indicator` and `[ChannelN],play_indicator` when these are blinking (depending on the currently chosen *cue mode*).
>
> > **Range**
> > > binary, read-only

Feedback
> None

New in version 2.4.0.

[App]num_decks
> The number of decks currently enabled.
>
> > **Range**
> > > integer
> >
> > **Feedback**
> > > None
>
> New in version 2.4.0: Replaces the deprecated *[Master],num_decks* control.

[App]num_samplers
> The number of samplers currently enabled.
>
> > **Range**
> > > integer
> >
> > **Feedback**
> > > None
>
> New in version 2.4.0: Replaces the deprecated *[Master],num_samplers* control.

[App]num_preview_decks
> The number of preview decks currently enabled.
>
> > **Range**
> > > integer
> >
> > **Feedback**
> > > None
>
> New in version 2.4.0: Replaces the deprecated *[Master],num_preview_decks* control.

[App]num_microphones
> The number of microphone inputs that can be configured.
>
> > **Range**
> > > integer
> >
> > **Feedback**
> > > None
>
> New in version 2.4.0: Replaces the deprecated *[Master],num_microphones* control.

[App]num_auxiliaries
> The number of auxiliary inputs that can be configured.
>
> > **Range**
> > > integer
> >
> > **Feedback**
> > > None
>
> New in version 2.4.0: Replaces the deprecated *[Master],num_auxiliaries* control.

[App]samplerate
> The current output sample rate (default: 44100 Hz).

Range

absolute value (in Hz)

Feedback

None

New in version 2.4.0: Replaces the deprecated *[Master],samplerate* control.

16.5.3 The **[Master]** group

The [Master] group generally corresponds to controls that affect the mixing engine. This will bear some similarity to what you will find on a DJ mixer (e.g. *crossfader* controls, headphone cueing controls, etc.).

[Master]audio_latency_usage

Reflects fraction of *latency*, given by the audio buffer size, spend for audio processing inside Mixxx. At value near 25 % there is a high risk of buffer underflows

This is a *ControlPotMeter control*.

Range

0 .. 25 %

Feedback

latency meter

New in version 2.0.0.

[Master]audio_latency_overload

Indicates a buffer under or over-flow. Resets after 500 ms

This is a *ControlPotMeter control*.

Range

binary

Feedback

Overload indicator

New in version 2.0.0.

[Master]audio_latency_overload_count

Counts buffer over and under-flows. Max one per 500 ms

Range

0 .. n

Feedback

Counter in hardware preferences

New in version 2.0.0.

[Master]balance

Adjusts the left/right channel balance on the Main output.

This is a *ControlPotMeter control*.

Range

-1.0..1.0

Feedback

Center Balance knob

[Master]booth_enabled

> Indicates whether a Booth output is configured in the *Sound Hardware Preferences*.
>
> > **Range**
> > > binary
> >
> > **Feedback**
> > > Booth gain knob shown or hidden
>
> New in version 2.1.0.

[Master]booth_gain

> Adjusts the gain of the Booth output.
>
> This is a *ControlPotMeter control*.
>
> > **Range**
> > > 0.0…1.0…5.0
> >
> > **Feedback**
> > > Booth gain knob
>
> New in version 2.1.0.

[Master]crossfader

> Adjusts the *crossfader* between players/decks (-1.0 is all the way left).
>
> This is a *ControlPotMeter control*.
>
> > **Range**
> > > -1.0..1.0
> >
> > **Feedback**
> > > Crossfader slider

[Master]crossfader_down

> Moves the *crossfader* left by 1/10th.
>
> > **Range**
> > > binary
> >
> > **Feedback**
> > > Crossfader slider

[Master]crossfader_down_small

> Moves the *crossfader* left by 1/100th.
>
> > **Range**
> > > binary
> >
> > **Feedback**
> > > Crossfader slider
>
> New in version 1.10.0.

[Master]crossfader_up

> Moves the *crossfader* right by 1/10th.
>
> > **Range**
> > > binary
> >
> > **Feedback**
> > > Crossfader slider

[Master]crossfader_up_small

Moves the *crossfader* right by 1/100th.

> **Range**
>> binary
>
> **Feedback**
>> Crossfader slider

New in version 1.10.0.

[Master]duckStrength

Microphone ducking strength

This is a *ControlPotMeter control*.

> **Range**
>> 0.0..1.0
>
> **Feedback**
>> Strength knob

New in version 2.0.0.

[Master]enabled

Indicator that the main mix is processed.

> **Range**
>> binary
>
> **Feedback**
>> None

New in version 2.0.0.

[Master]gain

Adjusts the gain for the main output as well as recording and broadcasting signal.

This is a *ControlPotMeter control*.

> **Range**
>> 0.0..1.0..5.0
>
> **Feedback**
>> Main volume knob

New in version 2.0.0.

[Master]headEnabled

Indicator that the headphone mix is processed.

> **Range**
>> binary
>
> **Feedback**
>> None

New in version 2.0.0.

[Master]headGain

Adjusts the headphone output gain.

This is a *ControlPotMeter control*.

> **Range**
>> 0.0..1.0..5.0
>
> **Feedback**
>> Headphone volume knob

New in version 2.0.0.

[Master]headMix

Adjusts the cue/main mix in the headphone output.

This is a *ControlPotMeter control*.

> **Range**
>> default
>
> **Feedback**
>> Pre/Main knob

[Master]headSplit

Splits headphone stereo cueing into right (main mono) and left (*PFL* mono).

> **Range**
>> binary
>
> **Feedback**
>> Split Cue button

New in version 2.0.0.

[Master]latency

Latency setting (sound buffer size) in milliseconds (default 64).

> **Range**
>> >=0 (absolute value)
>
> **Feedback**
>> Latency slider in the prefs

[Master]num_effectsavailable

The number of available effects that can be selected in an effect slot.

> **Range**
>> integer, read-only
>
> **Feedback**
>> None

New in version 2.1.0.

[Master]PeakIndicator

Indicates when the signal is clipping (too loud for the hardware and is being distorted) (composite).

This is a *ControlPotMeter control*.

> **Range**
>> binary
>
> **Feedback**
>> Clip light (mono)

[Master]PeakIndicatorL

Indicates when the signal is clipping (too loud for the hardware and is being distorted) for the left channel.

This is a *ControlPotMeter control*.

> **Range**
> > binary
>
> **Feedback**
> > Clip light (left)

[Master]PeakIndicatorR

Indicates when the signal is clipping (too loud for the hardware and is being distorted) for the right channel.

This is a *ControlPotMeter control*.

> **Range**
> > binary
>
> **Feedback**
> > Clip light (right)

[Master]talkoverDucking

Toggle microphone ducking mode (OFF, AUTO, MANUAL)

> **Range**
> > FIXME
>
> **Feedback**
> > Ducking mode button

New in version 2.0.0.

[Master]VuMeter

Outputs the current instantaneous main volume (composite).

This is a *ControlPotMeter control*.

> **Range**
> > default
>
> **Feedback**
> > Main meter (mono)

[Master]VuMeterL

Outputs the current instantaneous main volume for the left channel.

This is a *ControlPotMeter control*.

> **Range**
> > default
>
> **Feedback**
> > Main meter L

[Master]VuMeterR

Outputs the current instantaneous main volume for the right channel.

This is a *ControlPotMeter control*.

> **Range**
> > default

Feedback
Main meter R

16.5.4 Decks, Preview Decks and Samplers

Each deck in Mixxx corresponds to a `[ChannelN]` group. Whenever you see `[ChannelN]`, think "Deck N". N can range from 1 to the number of active decks in Mixxx.

Preview decks and Sample decks ("samplers") in Mixxx are identical to regular decks, they simply have a different purpose (previewing tracks or playing samples, respectively). Any control listed above for `[ChannelN]` will work for a samplers and preview decks, just replace `[ChannelN]` with `[PreviewDeckN]` or `[SamplerN]`.

See also:

There are some *additional global controls for samplers*.

[ChannelN]back

[PreviewDeckN]back

[SamplerN]back

Fast rewind (REW)

Range
binary

Feedback
<< button

[ChannelN]beat_active

[PreviewDeckN]beat_active

[SamplerN]beat_active

Indicates, depending on the play direction, how the player is currently positioned to the closest beat.

An LED controlled by beat_active can be used for beat matching or for finding a beat using jog or control vinyl.

Note: In case of fractional loops (e.g. 1/32), the rate of beat events can be very high. You should test if your controller is capable to process this update rate. If not, inhibt the beat indication for short loops, depending on the value of *[ChannelN],beatloop_size*.

Value	Play direction	Position
0		Set when play direction changes or +-20% of the distance to the previous/next beat is reached
1	Forward	Set at a beat
2	Reverse	Set at a beat

Range
real number, read-only

Feedback
None

New in version 1.10.0: (Reverse indication added in 2.4.0)

[ChannelN]beat_closest

[PreviewDeckN]beat_closest

[SamplerN]beat_closest

> Its value is set to the sample position of the closest beat of the active beat and is used for updating the beat LEDs.
>
> > **Range**
> > -1, 0.0, real-valued
> >
> > **Feedback**
> > None

[ChannelN]beat_distance

[PreviewDeckN]beat_distance

[SamplerN]beat_distance

> Outputs the relative position of the play marker in the section between the the previous and next beat marker.
>
> > **Range**
> > 0.0 - 1.0, real-valued
> >
> > **Feedback**
> > None

[ChannelN]beatjump

[PreviewDeckN]beatjump

[SamplerN]beatjump

> Jump forward (positive) or backward (negative) by N beats. If a loop is active, the loop is moved by X beats.
>
> > **Range**
> > any real number within the range, see *[ChannelN],beatloop_X_activate*
> >
> > **Feedback**
> > Player jumps forward or backward by X beats.
>
> New in version 2.0.0.

[ChannelN]beatjump_size

[PreviewDeckN]beatjump_size

[SamplerN]beatjump_size

> Set the number of beats to jump with *beatjump_forward*/*beatjump_backward*.
>
> > **Range**
> > positive real number
> >
> > **Feedback**
> > Beatjump size spinbox
>
> New in version 2.1.0.

[ChannelN]beatjump_size_halve

[PreviewDeckN]beatjump_size_halve

[SamplerN]beatjump_size_halve

> Halve the value of *beatjump_size*.
>
> > **Range**
> > binary
> >
> > **Feedback**
> > Beatjump size spinbox
>
> New in version 2.4.0.

[ChannelN]beatjump_size_double

[PreviewDeckN]beatjump_size_double

[SamplerN]beatjump_size_double

> Double the value of *beatjump_size*.
>
> > **Range**
> >> binary
> >
> > **Feedback**
> >> Beatjump size spinbox
>
> New in version 2.4.0.

[ChannelN]beatjump_forward

[PreviewDeckN]beatjump_forward

[SamplerN]beatjump_forward

> Jump forward by *beatjump_size*. If a loop is active, the loop is moved forward by X beats.
>
> > **Range**
> >> binary
> >
> > **Feedback**
> >> Player jumps forward by *beatjump_size*.
>
> New in version 2.1.0.

[ChannelN]beatjump_backward

[PreviewDeckN]beatjump_backward

[SamplerN]beatjump_backward

> Jump backward by *beatjump_size*. If a loop is active, the loop is moved backward by X beats.
>
> > **Range**
> >> binary
> >
> > **Feedback**
> >> Player jumps backward by *beatjump_size*.
>
> New in version 2.1.0.

[ChannelN]beatjump_X_forward

[PreviewDeckN]beatjump_X_forward

[SamplerN]beatjump_X_forward

> Jump forward by X beats. A control exists for X = 0.03125, 0.0625, 0.125, 0.25, 0.5, 1, 2, 4, 8, 16, 32, 64, 128, 256, 512. If a loop is active, the loop is moved forward by X beats.
>
> > **Range**
> >> binary
> >
> > **Feedback**
> >> Player jumps forward by X beats.
>
> New in version 2.0.0.

[ChannelN]beatjump_X_backward

[PreviewDeckN]beatjump_X_backward

[SamplerN]beatjump_X_backward

> Jump backward by X beats. A control exists for X = 0.03125, 0.0625, 0.125, 0.25, 0.5, 1, 2, 4, 8, 16, 32, 64, 128, 256, 512. If a loop is active, the loop is moved backward by X beats.

Range
> binary

Feedback
> Player jumps backward by X beats.

New in version 2.0.0.

[ChannelN]beatloop_activate

[PreviewDeckN]beatloop_activate

[SamplerN]beatloop_activate

Set a loop that is *beatloop_size* beats long and enables the loop

> **Range**
> > binary

> **Feedback**
> > A loop is shown over *beatloop_size* beats

New in version 2.1.0.

[ChannelN]beatloop_X_activate

[PreviewDeckN]beatloop_X_activate

[SamplerN]beatloop_X_activate

Activates a loop over X beats. A control exists for X = 0.03125, 0.0625, 0.125, 0.25, 0.5, 1, 2, 4, 8, 16, 32, 64, 128, 256, 512

> **Range**
> > binary

> **Feedback**
> > A loop is shown over X beats.

New in version 1.10.0.

[ChannelN]beatloop_size

[PreviewDeckN]beatloop_size

[SamplerN]beatloop_size

Set the length of the loop in beats that will get set with *beatloop_activate* and *beatlooproll_activate*. Changing this will resize an existing loop if the length of the loop matches *beatloop_size*.

> **Range**
> > positive real number

> **Feedback**
> > Beatloop size spinbox and possibly loop section on waveform

New in version 2.1.0.

[ChannelN]beatloop_X_toggle

[PreviewDeckN]beatloop_X_toggle

[SamplerN]beatloop_X_toggle

Toggles a loop over X beats. A control exists for X = 0.03125, 0.0625, 0.125, 0.25, 0.5, 1, 2, 4, 8, 16, 32, 64, 128, 256, 512

> **Range**
> > binary

> **Feedback**
>> A loop is shown over X beats.

New in version 1.10.0.

[ChannelN]beatloop_X_enabled

[PreviewDeckN]beatloop_X_enabled

[SamplerN]beatloop_X_enabled

> 1 if beatloop X is enabled, 0 if not.

>> **Range**
>>> binary

>> **Feedback**
>>> Beatloop X button in skin is lit.

New in version 1.10.0.

[ChannelN]beatlooproll_activate

[PreviewDeckN]beatlooproll_activate

[SamplerN]beatlooproll_activate

> Activates a rolling loop over `beatloop_size` beats. Once disabled, playback will resume where the track would have been if it had not entered the loop.

>> **Range**
>>> binary

>> **Feedback**
>>> A loop overlay is shown over `beatloop_size` beats on waveform.

New in version 2.1.0.

[ChannelN]beatlooproll_X_activate

[PreviewDeckN]beatlooproll_X_activate

[SamplerN]beatlooproll_X_activate

> Activates a rolling loop over X beats. Once disabled, playback will resume where the track would have been if it had not entered the loop. A control exists for X = 0.03125, 0.0625, 0.125, 0.25, 0.5, 1, 2, 4, 8, 16, 32, 64, 128, 256, 512

>> **Range**
>>> binary

>> **Feedback**
>>> Beatloop X button in skin is lit. A loop overlay is shown over X beats on waveform.

New in version 1.11.0.

[ChannelN]beats_adjust_faster

[PreviewDeckN]beats_adjust_faster

[SamplerN]beats_adjust_faster

> Adjust the average *BPM* up by +0.01

>> **Range**
>>> binary

>> **Feedback**
>>> The *beatgrid* lines move closer to each other.

New in version 2.0.0.

[ChannelN]beats_adjust_slower

[PreviewDeckN]beats_adjust_slower

[SamplerN]beats_adjust_slower

Adjust the average *BPM* down by -0.01.

> **Range**
>> binary

> **Feedback**
>> The *beatgrid* lines move further apart from each other.

New in version 2.0.0.

[ChannelN]beats_translate_curpos

[PreviewDeckN]beats_translate_curpos

[SamplerN]beats_translate_curpos

Adjust *beatgrid* so closest beat is aligned with the current playposition.

> **Range**
>> binary

> **Feedback**
>> The beatgrid moves to align with current playposition.

New in version 1.10.0.

[ChannelN]beats_translate_match_alignment

[PreviewDeckN]beats_translate_match_alignment

[SamplerN]beats_translate_match_alignment

Adjust *beatgrid* to match another playing deck.

> **Range**
>> binary

> **Feedback**
>> Instead of *syncing* the beatgrid to the current playposition, sync the beatgrid so the nearest beat lines up with the other track's nearest beat.

New in version 2.0.0.

[ChannelN]beats_translate_earlier

[PreviewDeckN]beats_translate_earlier

[SamplerN]beats_translate_earlier

Move *beatgrid* to an earlier position.

> **Range**
>> binary

> **Feedback**
>> The beatgrid moves left by a small amount.

New in version 2.0.0.

[ChannelN]beats_translate_later

[PreviewDeckN]beats_translate_later

[SamplerN]beats_translate_later

Move *beatgrid* to a later position.

Range
>   binary

Feedback
>   The beatgrid moves right by a small amount.

New in version 2.0.0.

[ChannelN]beatsync

[PreviewDeckN]beatsync

[SamplerN]beatsync

> *Syncs* the *tempo* and phase (depending on quantize) to that of the other track (if *BPM* is detected on both).

>   **range**
>>   binary

>   **feedback**
>>   The *Sync* button flashes and the *tempo* slider snaps to the appropriate value.

> Changed in version 1.10.0.

[ChannelN]beatsync_phase

[PreviewDeckN]beatsync_phase

[SamplerN]beatsync_phase

> *Syncs* the *phase* to that of the other track (if *BPM* is detected on both).

>   **Range**
>>   binary

>   **Feedback**
>>   The *Sync* button flashes and the *tempo* slider snap to the appropriate value.

> New in version 1.10.0.

[ChannelN]beatsync_tempo

[PreviewDeckN]beatsync_tempo

[SamplerN]beatsync_tempo

> *Syncs* the *tempo* to that of the other track (if *BPM* is detected on both).

>   **Range**
>>   binary

>   **Feedback**
>>   The *Sync* button flashes and the *tempo* slider snaps to the appropriate value.

> New in version 1.10.0.

[ChannelN]bpm

[PreviewDeckN]bpm

[SamplerN]bpm

> Reflects the perceived (rate-adjusted) *BPM* of the loaded file.

> This is a *ControlPotMeter control*.

>   **Range**
>>   real-valued

>   **Feedback**
>>   *BPM* value display

> Changed in version 1.10.0.

[ChannelN]bpm_tap

[PreviewDeckN]bpm_tap

[SamplerN]bpm_tap

When tapped repeatedly, adjusts the *BPM* of the track on the deck (not the tempo slider!) to match the taps.

Note: If you want to change the *rate* of the deck use script.bpm.tapButton(deck) in your controller mapping instead.

> **Range**
>> binary
>
> **Feedback**
>> *BPM* value display (playback speed doesn't change)

New in version 1.9.2.

[ChannelN]CloneFromDeck

[PreviewDeckN]CloneFromDeck

[SamplerN]CloneFromDeck

Clone the given deck number, copying the play state, position, rate, and key. If 0 or a negative number is given, Mixxx will attempt to select the first playing deck as the source for the clone.

> **Range**
>> integer between 1 and `[Master],num_decks` (inclusive)
>
> **Feedback**
>> The channel will start playing at the rate and position of the source deck.

New in version 2.3.0.

[ChannelN]CloneFromSampler

[PreviewDeckN]CloneFromSampler

[SamplerN]CloneFromSampler

Clone the given sampler number, copying the play state, position, rate, and key.

> **Range**
>> integer between 1 and `[App],num_samplers` (inclusive)
>
> **Feedback**
>> The channel will start playing at the rate and position of the source deck.

New in version 2.3.0.

[ChannelN]LoadTrackFromDeck

[PreviewDeckN]LoadTrackFromDeck

[SamplerN]LoadTrackFromDeck

Load the track currently loaded to the given deck number.

> **Range**
>> integer between 1 and `[App],num_decks` (inclusive)
>
> **Feedback**
>> Track name & waveform change

New in version 2.4.0.

[ChannelN]LoadTrackFromSampler

[PreviewDeckN]LoadTrackFromSampler

[SamplerN]LoadTrackFromSampler

> Load the track currently loaded to the given sampler number.
>
> > **Range**
> > > integer between 1 and *[App],num_samplers* (inclusive)
> >
> > **Feedback**
> > > Track name & waveform change
>
> New in version 2.4.0.

[ChannelN]cue_cdj

[PreviewDeckN]cue_cdj

[SamplerN]cue_cdj

> Represents a *Cue* button that is always in *CDJ* mode.
>
> > **Range**
> > > binary
> >
> > **Feedback**
> > > None
>
> New in version 1.10.0.

[ChannelN]cue_clear

[PreviewDeckN]cue_clear

[SamplerN]cue_clear

> Deletes the already set cue point and sets *[ChannelN],cue_point* to -1.
>
> > **Range**
> > > binary
> >
> > **Feedback**
> > > None

[ChannelN]cue_goto

[PreviewDeckN]cue_goto

[SamplerN]cue_goto

> If the cue point is set, recalls the cue point.
>
> > **Range**
> > > binary
> >
> > **Feedback**
> > > Player may change position

[ChannelN]cue_default

[PreviewDeckN]cue_default

[SamplerN]cue_default

> In *CDJ* mode, when playing, returns to the *cue point* and pauses. If stopped, sets a cue point at the current location. If stopped and at a cue point, plays from that point until released (set to 0.)

[ChannelN]hotcue_X_activate

[PreviewDeckN]hotcue_X_activate

[SamplerN]hotcue_X_activate

> If *hotcue* X is not set, this sets a hotcue at the current play position and saves it as hotcue X of `type` "Hotcue". In case a loop is currently enabled (i.e. if *[ChannelN],loop_enabled* is set to 1), the loop will be saved as hotcue X instead and `hotcue_X_type` will be set to "Loop".
>
> If hotcue X has been set as a regular cue point, the player seeks to the saved play position.
>
> If `hotcue_X_type` is "Loop", looping will be enabled and the loop controls (e.g. `loop_start_position`, `loop_end_position` and `beatloop_size`) will be set accordingly. Just like `reloop_toggle`, the player seeks back to the loop start when the current play position is behind the loop, and enabled without a seek when it is in front of or inside the loop. This allows a loop catching behavior on one hand and a jump back when the loop has been exit by just triggering this control.
>
> Setting the control to 1 when the track is currently not playing (i.e. `play` is set to 0) will start hotcue previewing. After resetting the control to 0, playback will usually be stopped and the player will seek to the hotcue position. If `play` is set to 1 while previewing is active, the playback will continue and no seek occurs.
>
> > **Range**
> > > binary
> >
> > **Feedback**
> > > Player may change position. Hotcue X marker may change on waveform.
>
> New in version 1.8.0.
>
> Changed in version 2.4.0: Added support for saved loops.

[ChannelN]hotcue_X_activatecue

[PreviewDeckN]hotcue_X_activatecue

[SamplerN]hotcue_X_activatecue

> Identical to `hotcue_X_activate`, but this always sets a regular cue point, regardless of whether a loop is enabled or not. This control can be used for controllers that have dedicated *hotcue*/saved loop pad modes.
>
> New in version 2.4.0.

[ChannelN]hotcue_X_activateloop

[PreviewDeckN]hotcue_X_activateloop

[SamplerN]hotcue_X_activateloop

> Identical to `hotcue_X_activate`, but this always sets a saved loop, regardless of whether a loop is enabled or not. If no loop is available, this sets and enables a beat loop of of `beatloop_size`. This control can be used for controllers that have dedicated *hotcue*/saved loop pad modes.

> New in version 2.4.0.

[ChannelN]hotcue_X_cueloop

[PreviewDeckN]hotcue_X_cueloop

[SamplerN]hotcue_X_cueloop

> Enables or disables a loop from the position of *hotcue* X. If X is a saved loop, that loop will be used, otherwise it will set a beatloop of `beatloop_size` from the cue position. In case the hotcue is not set, this control will set a regular cue point at the current position and start a beatloop.

> This control can be used to map the primary action of the "Cue Loop" performance pad mode on Serato-style controllers.

> New in version 2.4.0.

[ChannelN]hotcue_X_clear

[PreviewDeckN]hotcue_X_clear

[SamplerN]hotcue_X_clear

> If *hotcue* X is set, clears its hotcue status.

> > **Range**
> > binary

> > **Feedback**

> > **Feedback**
> > Color of Hotcue X button and waveform marker changes.

> New in version 2.3.0.

[ChannelN]hotcue_X_status

[PreviewDeckN]hotcue_X_status

[SamplerN]hotcue_X_status

> Indicates if *hotcue* slot X is set, active or empty.

> > **Range (read-only)**

Value	Meaning
0	Hotcue X is not set
1	Hotcue X is set
2	Hotcue X is active (saved loop is enabled or hotcue is previewing)

New in version 2.4.0: Replaces the deprecated `[ChannelN],hotcue_X_enabled`.

[ChannelN]hotcue_X_type

[PreviewDeckN]hotcue_X_type

[SamplerN]hotcue_X_type

Indicates the type of the *hotcue* in hotcue slot X.

> **Range (read-only)**

Value	Type
0	Invalid/Not Set
1	Hotcue
4	Saved Loop

New in version 2.4.0.

[ChannelN]hotcue_X_goto

[PreviewDeckN]hotcue_X_goto

[SamplerN]hotcue_X_goto

If *hotcue* X is set, seeks the player to hotcue X's position.

> **Range**
> binary

> **Feedback**
> Player may change position.

New in version 1.8.0.

[ChannelN]hotcue_X_gotoandplay

[PreviewDeckN]hotcue_X_gotoandplay

[SamplerN]hotcue_X_gotoandplay

If *hotcue* X is set, seeks the player to hotcue X's position and starts playback.

> **Range**
> binary

> **Feedback**
> Player may change position.

New in version 1.11.0.

[ChannelN]hotcue_X_gotoandloop

[PreviewDeckN]hotcue_X_gotoandloop

[SamplerN]hotcue_X_gotoandloop

If *hotcue* X is set, seeks the player to hotcue X's position, starts playback and looping. If the hotcue is a saved loop, the loop is enabled, otherwise a beatloop of `beatloop_size` is set from the hotcue's position.

This control can be used to map the secondary action of the "Cue Loop" performance pad mode on Serato-style controllers.

> **Range**
> binary

> **Feedback**
> Player may change position and looping is enabled.

New in version 2.4.0.

`[ChannelN]hotcue_X_gotoandstop`

`[PreviewDeckN]hotcue_X_gotoandstop`

`[SamplerN]hotcue_X_gotoandstop`

> If *hotcue* X is set, seeks the player to hotcue X's position and stops.
>
> > **Range**
> > > binary
> >
> > **Feedback**

>
> Changed in version 2.4.0.

`[ChannelN]hotcue_X_setcue`

`[PreviewDeckN]hotcue_X_setcue`

`[SamplerN]hotcue_X_setcue`

> Identical to `hotcue_X_set`, but this always sets a regular cue point (i.e. `hotcue_X_type` "Hotcue"), regardless of whether a loop is enabled or not.
>
> This control can be used for controllers that have dedicated *hotcue*/saved loop pad modes.
>
> New in version 2.4.0.

`[ChannelN]hotcue_X_setloop`

`[PreviewDeckN]hotcue_X_setloop`

[SamplerN]hotcue_X_setloop

Identical to `hotcue_X_set`, but this always saves a loop (i.e. `hotcue_X_type` "Loop"), regardless of whether a loop is enabled or not. If no loop is available, this sets and enables a beat loop of of `beatloop_size`. This control can be used for controllers that have dedicated *hotcue*/saved loop pad modes.

New in version 2.4.0.

[ChannelN]hotcue_focus

[PreviewDeckN]hotcue_focus

[SamplerN]hotcue_focus

Contains the number of the most recently used *hotcue* (or -1 if no hotcue was used).

> **Range**
> positive integer (or -1)

> **Feedback**
> None

New in version 2.3.0.

[ChannelN]hotcue_focus_color_prev

[PreviewDeckN]hotcue_focus_color_prev

[SamplerN]hotcue_focus_color_prev

If there is a focused *hotcue*, sets its color to the previous color in the palette.

> **Range**
> binary

> **Feedback**
> Color of focused hotcue button and waveform marker changes.

New in version 2.3.0.

[ChannelN]hotcue_focus_color_next

[PreviewDeckN]hotcue_focus_color_next

[SamplerN]hotcue_focus_color_next

If there is a focused *hotcue*, sets its color to the next color in the palette.

> **Range**
> binary

> **Feedback**
> Color of focused hotcue button and waveform marker changes.

New in version 2.3.0.

[ChannelN]intro_end_activate

[PreviewDeckN]intro_end_activate

[SamplerN]intro_end_activate

If the intro end cue is set, seeks the player to the intro end position. If the intro end is not set, sets the intro end to the current play position.

> **Range**
> binary

> **Feedback**
> Player may change position. Intro end marker may change on waveform.

New in version 2.3.0.

[ChannelN]intro_end_clear

[PreviewDeckN]intro_end_clear

[SamplerN]intro_end_clear

> If the intro end cue is set, clears its status.

> > **Range**

Feedback
Track name & waveform change

[ChannelN]LoadSelectedTrackAndPlay

[PreviewDeckN]LoadSelectedTrackAndPlay

[SamplerN]LoadSelectedTrackAndPlay

Loads the currently highlighted track into the deck and starts playing

Range
binary

Feedback
Track name & waveform change & Play/pause button

New in version 1.11.0.

[ChannelN]local_bpm

[PreviewDeckN]local_bpm

[SamplerN]local_bpm

Reflects the average bpm around the current play position of the loaded file.

Range
positive value

Feedback
None

[ChannelN]loop_double

[PreviewDeckN]loop_double

[SamplerN]loop_double

Doubles *beatloop_size*. If *beatloop_size* equals the size of the loop, the loop is resized.

If a saved loop is currently enabled, the modification is saved to the hotcue slot immediately.

Range
binary

Feedback
Beatloop size spinbox changes

New in version 1.10.0.

Changed in version 2.1.0.

Changed in version 2.4.0: Added support for saved loops.

[ChannelN]loop_enabled

[PreviewDeckN]loop_enabled

[SamplerN]loop_enabled

Indicates whether or not a loop is enabled.

Range
binary

Feedback
Loop in waveform is active.

New in version 1.8.0.

Changed in version 2.4.0: Control is not longer read-only and can be used to enable/disable looping.

[ChannelN]loop_remove

[PreviewDeckN]loop_remove

[SamplerN]loop_remove

> Clears the last active loop, i.e. deactivates and removes loop, detaches *loop_in*, *loop_out*, *reloop_toggle* and related controls. It does not affect saved loops.
>
> > **Range**
> > > binary
> >
> > **Feedback**

New in version 1.8.0.

Changed in version 2.1.0.

[ChannelN]loop_in_goto

[PreviewDeckN]loop_in_goto

[SamplerN]loop_in_goto

Seek to the loop in point.

> **Range**
> binary

> **Feedback**
> Waveform position jumps

New in version 2.1.0.

[ChannelN]loop_out

[PreviewDeckN]loop_out

[SamplerN]loop_out

If loop is disabled, sets the player loop out position to the current play position. If loop is enabled, press and hold to move loop out position to the current play position. If quantize is enabled, *beatloop_size* will be updated to reflect the new loop size.

> **Range**
> binary

> **Feedback**
> Loop-out marker changes on waveform.

New in version 1.8.0.

Changed in version 2.1.0.

[ChannelN]loop_out_goto

[PreviewDeckN]loop_out_goto

[SamplerN]loop_out_goto

Seek to the loop out point.

> **Range**
> binary

> **Feedback**
> Waveform position jumps

New in version 2.1.0.

[ChannelN]loop_move

[PreviewDeckN]loop_move

[SamplerN]loop_move

Move loop forward by X beats (positive) or backward by X beats (negative).

If a saved loop is currently enabled, the modification is saved to the hotcue slot immediately.

> **Range**
> real number

> **Feedback**
> Loop moves forward or backward by X beats.

New in version 2.0.0.

Changed in version 2.4.0: Added support for saved loops.

[ChannelN]loop_move_X_forward

[PreviewDeckN]loop_move_X_forward

[SamplerN]loop_move_X_forward

Moves the loop in and out points forward by X beats. A control exists for X = 0.03125, 0.0625, 0.125, 0.25, 0.5, 1, 2, 4, 8, 16, 32, 64, 128, 256, 512

> **Range**
>> binary
>
> **Feedback**
>> Loop moves forward by X beats.

If a saved loop is currently enabled, the modification is saved to the hotcue slot immediately.

New in version 2.0.0.

Changed in version 2.4.0: Added support for saved loops.

[ChannelN]loop_move_X_backward

[PreviewDeckN]loop_move_X_backward

[SamplerN]loop_move_X_backward

Loop moves by X beats. A control exists for X = 0.03125, 0.0625, 0.125, 0.25, 0.5, 1, 2, 4, 8, 16, 32, 64, 128, 256, 512

If a saved loop is currently enabled, the modification is saved to the hotcue slot immediately.

> **Range**
>> binary
>
> **Feedback**
>> Loop moves backward by X beats.

New in version 2.0.0.

Changed in version 2.4.0: Added support for saved loops.

[ChannelN]loop_scale

[PreviewDeckN]loop_scale

[SamplerN]loop_scale

Scale the loop length by the value scale is set to by moving the end marker. *beatloop_size* is not updated to reflect the change.

If a saved loop is currently enabled, the modification is saved to the hotcue slot immediately.

> **Range**
>> 0.0 - infinity
>
> **Feedback**
>> Loop length is scaled by given amount on waveform.

New in version 1.10.0.

Changed in version 2.4.0: Added support for saved loops.

[AuxiliaryN]orientation_left

> Assign channel to the left side of the *crossfader*.

[ChannelN]orientation_right

[PreviewDeckN]orientation_right

[SamplerN]orientation_right

[AuxiliaryN]orientation_right

> Assign channel to the right side of the *crossfader*.

[ChannelN]outro_end_activate

[PreviewDeckN]outro_end_activate

[SamplerN]outro_end_activate

> If the outro end cue is set, seeks the player to the outro end position. If the outro end is not set, sets the outro end to the current play position.
>
> > **Range**
> > > binary

16.5. Mixxx Controls   **153**

Feedback
Player may change position. Outro end marker may change on waveform.

New in version 2.3.0.

[ChannelN]outro_end_clear

[PreviewDeckN]outro_end_clear

[SamplerN]outro_end_clear
If the outro end cue is set, clears its status.

Range
binary

Feedback
Outro end marker changes on waveform.

New in version 2.3.0.

[ChannelN]outro_end_enabled

[PreviewDeckN]outro_end_enabled

[SamplerN]outro_end_enabled
1 if outro end cue is set, (position is not -1), 0 otherwise.

Range
binary, read-only

Feedback
Outro end button lights up.

New in version 2.3.0.

[ChannelN]outro_end_position

[PreviewDeckN]outro_end_position

[SamplerN]outro_end_position
The position of the outro end in samples, -1 if not set.

Range
positive integer

Feedback
Outro end marker changes on waveform.

New in version 2.3.0.

[ChannelN]outro_end_set

[PreviewDeckN]outro_end_set

[SamplerN]outro_end_set
Set outro end to the current play position. If outro end was previously set, it is moved to the new position.

Range
binary

Feedback
Outro end marker changes on waveform.

New in version 2.3.0.

[ChannelN]outro_start_activate

[PreviewDeckN]outro_start_activate

[SamplerN]outro_start_activate

If the outro start cue is set, seeks the player to the outro start position. If the outro start is not set, sets the outro start to the current play position.

> **Range**
> > binary
>
> **Feedback**
> > Player may change position. Outro start marker may change on waveform.

New in version 2.3.0.

[ChannelN]outro_start_clear

[PreviewDeckN]outro_start_clear

[SamplerN]outro_start_clear

If the outro start cue is set, clears its status.

> **Range**
> > binary
>
> **Feedback**
> > Outro start marker changes on waveform.

New in version 2.3.0.

[ChannelN]outro_start_enabled

[PreviewDeckN]outro_start_enabled

[SamplerN]outro_start_enabled

1 if outro start cue is set, (position is not -1), 0 otherwise.

> **Range**
> > binary, read-only
>
> **Feedback**
> > Outro start button lights up.

New in version 2.3.0.

[ChannelN]outro_start_position

[PreviewDeckN]outro_start_position

[SamplerN]outro_start_position

The position of the outro start in samples, -1 if not set.

> **Range**
> > positive integer
>
> **Feedback**
> > Outro start marker changes on waveform.

New in version 2.3.0.

[ChannelN]outro_start_set

[PreviewDeckN]outro_start_set

[SamplerN]outro_start_set

Set outro start to the current play position. If outro start was previously set, it is moved to the new position.

> **Range**
> > binary

Feedback
Outro start marker changes on waveform.

New in version 2.3.0.

[ChannelN]passthrough

[PreviewDeckN]passthrough

[SamplerN]passthrough

Connects the vinyl control input for vinyl control on that deck to the channel output. Allows to mix external media into DJ sets.

Range
binary

Feedback
Passthrough label in the *waveform overview* and passthrough button

New in version 2.0.0.

[ChannelN]PeakIndicator

[PreviewDeckN]PeakIndicator

[SamplerN]PeakIndicator

Indicates when the signal is clipping (too loud for the hardware and is being distorted)

This is a *ControlPotMeter control*.

Range
binary

Feedback
Clip light

[ChannelN]PeakIndicatorL

[PreviewDeckN]PeakIndicatorL

[SamplerN]PeakIndicatorL

Indicates when the signal is clipping (too loud for the hardware and is being distorted) for the left channel

This is a *ControlPotMeter control*.

Range
binary

Feedback
Clip light (left)

New in version 2.0.0.

[ChannelN]PeakIndicatorR

[PreviewDeckN]PeakIndicatorR

[SamplerN]PeakIndicatorR

Indicates when the signal is clipping (too loud for the hardware and is being distorted) for the right channel

This is a *ControlPotMeter control*.

Range
binary

Feedback
Clip light (right)

New in version 2.0.0.

[ChannelN]pfl

[PreviewDeckN]pfl

[SamplerN]pfl

> Toggles *headphone cueing (PFL)*.
>
> > **Range**
> > > binary
> >
> > **Feedback**
> > > Headphone button

[ChannelN]pitch

[PreviewDeckN]pitch

[SamplerN]pitch

> The total adjustment to the track's pitch, including changes from the rate slider if keylock is off as well as *pitch_adjust*.
>
> ---
>
> **Note:** Do not map this to knobs or sliders on controllers; map *pitch_adjust* instead.
>
> ---
>
> This is a *ControlPotMeter control*.
>
> > **Range**
> > > -6.0..6.0 semitones
> >
> > **Feedback**
> > > Key display
>
> New in version 2.0.0.

[ChannelN]pitch_up

[PreviewDeckN]pitch_up

[SamplerN]pitch_up

> Changes the track pitch up one half step, independent of the tempo.
>
> > **Range**
> > > binary
> >
> > **Feedback**
> > > Key display
>
> New in version 2.0.0.

[ChannelN]pitch_down

[PreviewDeckN]pitch_down

[SamplerN]pitch_down

> Changes the track pitch down one half step, independent of the tempo.
>
> > **Range**
> > > binary
> >
> > **Feedback**
> > > Key display
>
> New in version 2.0.0.

[ChannelN]pitch_adjust

[PreviewDeckN]pitch_adjust

[SamplerN]pitch_adjust

Adjusts the pitch in addition to the *tempo* slider pitch and keylock. It is reset after loading a new track.

This is a *ControlPotMeter control*.

> **Range**
>> -3.0..3.0 semitones
>
> **Feedback**
>> Key display

New in version 2.0.0.

[ChannelN]play

[PreviewDeckN]play

[SamplerN]play

Toggles playing or pausing the track.

The value is set to 1 when the track is playing or when previewing from cue points and when the play command is adopted and track will be played after loading.

> **Range**
>> binary
>
> **Feedback**
>> Play/pause button

[ChannelN]play_indicator

[PreviewDeckN]play_indicator

[SamplerN]play_indicator

Provides information to be bound with the a Play/Pause button e.g blinking when play is possible

> **Range**
>> binary, read-only
>
> **Feedback**
>> Play/pause button

New in version 2.0.0.

[ChannelN]play_latched

[PreviewDeckN]play_latched

[SamplerN]play_latched

This is set to 1 when the track is playing, but not when previewing (see *play*).

> **Range**
>> binary, read-only
>
> **Feedback**
>> Play/pause button

New in version 2.3.0.

[ChannelN]play_stutter

[PreviewDeckN]play_stutter

[SamplerN]play_stutter

A play button without pause. Pushing while playing, starts play at *cue point* again (Stutter).

> **Range**
>> binary

> **Feedback**
>> Play/Stutter button

New in version 2.0.0.

[ChannelN]playposition

[PreviewDeckN]playposition

[SamplerN]playposition

Sets the absolute position in the track.

This is a *ControlPotMeter control*.

> **Range**
>> -0.14 to 1.14 (0 = beginning -> Midi 14, 1 = end -> Midi 114)

> **Feedback**
>> Waveform

[ChannelN]pregain

[PreviewDeckN]pregain

[SamplerN]pregain

Adjusts the pre-fader gain of the track (to avoid clipping)

This is a *ControlPotMeter control*.

> **Range**
>> 0.0..1.0..4.0

> **Feedback**
>> GAIN knob

[ChannelN]quantize

[PreviewDeckN]quantize

[SamplerN]quantize

Aligns Hot-cues and Loop In & Out to the next beat from the current position.

> **Range**
>> binary

> **Feedback**
>> Hot-cues or Loop In/Out markers

New in version 1.10.0.

[ChannelN]rate

[PreviewDeckN]rate

[SamplerN]rate

Speed control

This is a *ControlPotMeter control*.

> **Range**
>> -1.0..1.0

> **Feedback**
>> Speed slider

[ChannelN]rate_dir

[PreviewDeckN]rate_dir

[SamplerN]`rate_dir`

    Indicates orientation of speed slider.

        Range

            -1 or 1

[ChannelN]`rate_perm_down`

[PreviewDeckN]`rate_perm_down`

[SamplerN]`rate_perm_down`

    Sets the speed one step lower (4 % default) lower

        Range

            binary

        Feedback

            Perm down button & Speed slider

[ChannelN]`rate_perm_down_small`

[PreviewDeckN]`rate_perm_down_small`

[SamplerN]`rate_perm_down_small`

    Sets the speed one small step lower (1 % default)

        Range

            binary

        Feedback

            Perm down button & Speed slider

[ChannelN]`rate_perm_up`

[PreviewDeckN]`rate_perm_up`

[SamplerN]`rate_perm_up`

    Sets the speed one step higher (4 % default)

        Range

            binary

        Feedback

            Perm up button & Speed slider

[ChannelN]`rate_perm_up_small`

[PreviewDeckN]`rate_perm_up_small`

[SamplerN]`rate_perm_up_small`

    Sets the speed one small step higher (1 % default)

        Range

            binary

        Feedback

            Perm up button & Speed slider

[ChannelN]`rate_temp_down`

[PreviewDeckN]`rate_temp_down`

[SamplerN]`rate_temp_down`

    Holds the speed one step lower while active

        Range

            binary

Feedback
Temp down button & Speed slider

[ChannelN]`rate_temp_down_small`

[PreviewDeckN]`rate_temp_down_small`

[SamplerN]`rate_temp_down_small`

Holds the speed one small step lower while active

Range
binary

Feedback
Temp down button & Speed slider

[ChannelN]`rate_temp_up`

[PreviewDeckN]`rate_temp_up`

[SamplerN]`rate_temp_up`

Holds the speed one step higher while active

Range
binary

Feedback
Temp up button & Speed slider

[ChannelN]`rate_temp_up_small`

[PreviewDeckN]`rate_temp_up_small`

[SamplerN]`rate_temp_up_small`

Holds the speed one small step higher while active

Range
binary

Feedback
Temp up button & Speed slider

[ChannelN]`rateRange`

[PreviewDeckN]`rateRange`

[SamplerN]`rateRange`

Sets the range of the Speed slider (0.08 = 8%)

This is a *ControlPotMeter control*.

Range
0.0..4.0

Feedback
none, until you move the Speed slider

[ChannelN]`rateSearch`

[PreviewDeckN]`rateSearch`

[SamplerN]`rateSearch`

Seeks forward (positive values) or backward (negative values) at a speed determined by the value

This is a *ControlPotMeter control*.

Range
-300..300

Feedback

Deck seeks

[ChannelN]rateEngine

[PreviewDeckN]rateEngine

[SamplerN]rateEngine

Actual rate (used in visuals, not for control)

[ChannelN]reloop_andstop

[PreviewDeckN]reloop_andstop

[SamplerN]reloop_andstop

Activate current loop, jump to its loop in point, and stop playback.

Range

binary

Feedback

Loop range in waveform activates or deactivates and play position moves to loop in point.

New in version 2.1.0.

[ChannelN]reloop_toggle

[PreviewDeckN]reloop_toggle

[SamplerN]reloop_toggle

Toggles the current loop on or off. If the loop is ahead of the current play position, the track will keep playing normally until it reaches the loop.

Range

binary

Feedback

Loop range in waveform activates or deactivates.

New in version 2.1.0.

[ChannelN]repeat

[PreviewDeckN]repeat

[SamplerN]repeat

Enable repeat-mode for the specified deck

Range

binary

Feedback

when track finishes, song loops to beginning

New in version 1.9.0.

[ChannelN]reset_key

[PreviewDeckN]reset_key

[SamplerN]reset_key

Resets the key to the original track key.

Range

binary

New in version 2.0.0.

[ChannelN]reverse

[PreviewDeckN]reverse

[SamplerN]reverse

> Toggles playing the track backwards
>
> > **Range**
> > binary
> >

> >
> > **Feedback**
> > > Mute button
>
> New in version 2.0.0.

[ChannelN]update_replaygain_from_pregain

[PreviewDeckN]update_replaygain_from_pregain

[SamplerN]update_replaygain_from_pregain

> Applies the deck pregain knob value to the detected ReplayGain value for the current track. This is a way to update the ReplayGain value of a track if it has been detected incorrectly. When this control is triggered, the pregain value for the deck will be centered so that there is no audible difference in track volume, so this operation is safe to use during performance, if the controller mapping uses soft-takeover for the pregain knob.
>
> > **Range**
> > > binary
> >
> > **Feedback**
> > > ReplayGain value is updated in library, deck pregain is reset to 1.0.

[ChannelN]vinylcontrol_enabled

[PreviewDeckN]vinylcontrol_enabled

[SamplerN]vinylcontrol_enabled

> Toggles whether a deck is being controlled by digital vinyl.
>
> > **Range**
> > > binary

Feedback
When enabled, a vinyl indication should appear onscreen indicating green for enabled.

New in version 1.10.0.

[ChannelN]vinylcontrol_cueing

[PreviewDeckN]vinylcontrol_cueing

[SamplerN]vinylcontrol_cueing

Determines how *cue points* are treated in vinyl control relative mode.

Range

Value	Meaning
0	Cue points ignored
1	One Cue - If needle is dropped after the *cue point*, track will seek to that cue point
2	Hot Cue - Track will seek to nearest previous *hotcue*

New in version 1.10.0.

[ChannelN]vinylcontrol_mode

[PreviewDeckN]vinylcontrol_mode

[SamplerN]vinylcontrol_mode

Determines how vinyl control interprets needle information.

Range

Value	Meaning
0	Absolute Mode (track position equals needle position and speed)
1	Relative Mode (track *tempo* equals needle speed regardless of needle position)
2	Constant Mode (track *tempo* equals last known-steady tempo regardless of needle input

See *Control Mode* for details.

Feedback
3-way button indicates status

New in version 1.10.0.

[ChannelN]vinylcontrol_status

[PreviewDeckN]vinylcontrol_status

[SamplerN]vinylcontrol_status

Provides visual feedback with regards to vinyl control status.

Range
0.0-3.0, read-only

Feedback
Off for control disabled, green for control enabled, blinking yellow for when the needle reaches the end of the record, and red for needle skip detected

New in version 1.10.0.

[ChannelN]visual_bpm

[PreviewDeckN]visual_bpm

[SamplerN]visual_bpm

> *BPM* to display in the *GUI* (updated more slowly than the actual BPM).
>
> > **Range**

>
> > **Range**
> > > binary
> >
> > **Feedback**
> > > Opens file dialog. Select configuration file.
>
> New in version 2.0.0.

See also:

The `[Skin],show_samplers` control can be used to show and hide sampler banks in the GUI.

16.5.5 Microphones and Auxiliary Channels

In contrast to *decks, preview decks and samplers*, microphones and auxiliary channels are input channels. You can map audio interface's inputs to mixxx's auxiliary input channels and connect external audio source to it (cellphone, mp3 player). Then you can use your *MIDI* controller to control its volume and some other parameters (orientation, gain, *volume*), apply effects and use the prelisten function.

Note: Although the first auxiliary group is named `[Auxiliary1]`, the group for the first microphone is just called `[Microphone]`, not `[Microphone1]`.

[MicrophoneN]input_configured

[AuxiliaryN]input_configured

> 1 if there is input is configured for this channel, 0 if not.
>
> > **Range**
> > > binary, read-only
> >
> > **Feedback**
> > > Configured channel in the sound preferences.

[MicrophoneN]main_mix

[AuxiliaryN]main_mix

> Hold value at 1 to mix channel input into the main output. For [MicrophoneN] use *[MicrophoneN], talkover* instead. Note that [AuxiliaryN] also take *[AuxiliaryN],orientation* into account.
>
> > **Range**

[AuxiliaryN]orientation

> Set channel orientation for the *crossfader*.
>
> > **Range**

Value	Meaning
0	Left side of crossfader
1	Center (not affected by crossfader)
2	Right side of crossfader

> > **Feedback**
> > > None
>
> New in version 1.10.0.

[MicrophoneN]PeakIndicator

[AuxiliaryN]PeakIndicator

> Indicates when the signal is clipping (too loud for the hardware and is being distorted)
>
> This is a *ControlPotMeter control*.
>
> > **Range**
> > > binary
> >
> > **Feedback**
> > > Microphone Clip light

New in version 1.10.0.

[MicrophoneN]PeakIndicatorL

[AuxiliaryN]PeakIndicatorL

Indicates when the signal is clipping (too loud for the hardware and is being distorted) for the left channel

This is a *ControlPotMeter control*.

> **Range**
> > binary
>
> **Feedback**
> > Clip light (left)

New in version 2.0.0.

[MicrophoneN]PeakIndicatorR

[AuxiliaryN]PeakIndicatorR

Indicates when the signal is clipping (too loud for the hardware and is being distorted) for the right channel

This is a *ControlPotMeter control*.

> **Range**
> > binary
>
> **Feedback**
> > Clip light (right)

New in version 2.0.0.

[MicrophoneN]pfl

[AuxiliaryN]pfl

Toggles *headphone cueing (PFL)*.

> **Range**
> > binary
>
> **Feedback**
> > Headphone button

[MicrophoneN]talkover

[AuxiliaryN]talkover

Hold value at 1 to mix channel input into the main output. For [AuxiliaryN] use `[AuxiliaryN], main_mix` instead. Note that [AuxiliaryN] also take `[AuxiliaryN],orientation` into account.

> **Range**
> > binary
>
> **Feedback**
> > Microphone: Talk button Auxiliary: N/A

New in version 1.10.0.

[MicrophoneN]volume

[AuxiliaryN]volume

Adjusts the channel volume fader

This is a *ControlPotMeter control*.

> **Range**
> > default

> **Feedback**
>> Microphone volume fader changes

New in version 1.10.0.

[MicrophoneN]pregain

[AuxiliaryN]pregain

Adjusts the gain of the input

This is a *ControlPotMeter control*.

> **Range**
>> 0.0..1.0..4.0

> **Feedback**
>> Microphone gain knob

[MicrophoneN]mute

[AuxiliaryN]mute

Mutes the channel

> **Range**
>> binary

> **Feedback**
>> Mute button

New in version 2.0.0.

[MicrophoneN]VuMeter

[AuxiliaryN]VuMeter

Outputs the current instantaneous channel volume

This is a *ControlPotMeter control*.

> **Range**
>> default

> **Feedback**
>> Microphone VU meter changes

New in version 1.10.0.

[MicrophoneN]VuMeterL

[AuxiliaryN]VuMeterL

Outputs the current instantaneous deck volume for the left channel

This is a *ControlPotMeter control*.

> **Range**
>> default

> **Feedback**
>> Deck VU meter L

New in version 2.0.0.

[MicrophoneN]VuMeterR

[AuxiliaryN]VuMeterR

Outputs the current instantaneous deck volume for the right channel

This is a *ControlPotMeter control*.

Range
default

Feedback
Deck VU meter R

New in version 2.0.0.

16.5.6 The `[VinylControl]` group

The `[VinylControl]` group can toggle the *vinyl control feature*.

`[VinylControl]Toggle`
Moves control by a vinyl control signal from one deck to another if using the single deck vinyl control (VC) feature.

Range
binary

Feedback
If VC isn't enabled on any decks, enable it on the first one we're receiving samples for. If VC is enabled on a single (exclusive) deck, and another deck is setup to receive samples, disable it on the former deck and enable it on the next eligible deck (ordered by deck number). If VC is enabled on multiple decks, don't do anything.

New in version 1.10.0.

`[VinylControl]gain`
Allows to amplify the "phono" level of attached turntables to "line" level. This is equivalent to setting the *turntable boost* in *Options ▸ Preferences ▸ Vinyl Control*

Range
binary

Feedback
position of Boost slider in *Options ▸ Preferences ▸ Vinyl Control* (is not updated while viewing this Preferences page)

New in version 1.10.0.

See also:

The *`[Skin],show_vinylcontrol`* control can be used to show and hide *vinyl control* related elements in the GUI.

16.5.7 The `[Recording]` controls

The controls in the `[Recording]` group can be used to query and control the *recording of your mix*.

`[Recording]toggle_recording`
Turns recording on or off.

Range
binary

Feedback
Recording icon

[Recording]status

Indicates whether Mixxx is currently recording.

> **Range**

Value	Meaning
0	Recording Stopped
1	Initialize Recording
2	Recording Active

> **Feedback**
>> Recording icon

16.5.8 AutoDJ controls

The [AutoDJ] controls allow interacting with *AutoDJ*.

[AutoDJ]enabled

Turns Auto DJ on or off.

> **Range**
>> binary

> **Feedback**
>> AutoDJ button

New in version 1.11.0.

[AutoDJ]shuffle_playlist

Shuffles the content of the Auto DJ playlist.

> **Range**
>> binary

> **Feedback**
>> Order of tracks in the AutoDJ playlist changes.

New in version 1.11.0.

[AutoDJ]skip_next

Skips the next track in the Auto DJ playlist.

> **Range**
>> binary

> **Feedback**
>> Skipped track is removed from the AutoDJ playlist.

New in version 1.11.0.

[AutoDJ]fade_now

Triggers the transition to the next track.

> **Range**
>> binary

> **Feedback**
>> Crossfader slider moves to the other side.

New in version 1.11.0.

[AutoDJ]add_random_track

> Adds a random track to the Auto DJ queue.
>
> > **Range**
> > > binary
> >
> > **Feedback**
> > > Track is added to AutoDJ queue.
>
> New in version 2.4.0.

16.5.9 The **[Library]** controls

The controls in the `[Library]` group can be used to navigate the *library*. Note that *`[Library],MoveUp`* and other Move and Scroll controls emulate keypresses and therefore require the Mixxx window to be focused.

[Library]MoveUp

> Equivalent to pressing the `Up` key on the keyboard
>
> > **Range**
> > > Binary
> >
> > **Feedback**
> > > Currently selected item changes
>
> New in version 2.1.0.

[Library]MoveDown

> Equivalent to pressing the `Down` key on the keyboard
>
> > **Range**
> > > Binary
> >
> > **Feedback**
> > > Currently selected item changes
>
> New in version 2.1.0.

[Library]MoveVertical

> Move the specified number of locations up or down. Intended to be mapped to an encoder knob.
>
> > **Range**
> > > Relative (positive values move down, negative values move up)
> >
> > **Feedback**
> > > Currently selected item changes
>
> New in version 2.1.0.

[Library]ScrollUp

> Equivalent to pressing the `PageUp` key on the keyboard
>
> > **Range**
> > > Binary
> >
> > **Feedback**
> > > Currently selected item changes
>
> New in version 2.1.0.

[Library]ScrollDown

Equivalent to pressing the PageDown key on the keyboard

> **Range**
>> Binary

> **Feedback**
>> Currently selected item changes

New in version 2.1.0.

[Library]ScrollVertical

Scroll the specified number of pages up or down. Intended to be mapped to an encoder knob.

> **Range**
>> Relative (positive values move down, negative values move up)

> **Feedback**
>> Currently selected item changes

New in version 2.1.0.

[Library]MoveLeft

Equivalent to pressing the Left key on the keyboard

> **Range**
>> Binary

> **Feedback**
>> Currently selected item changes

New in version 2.1.0.

[Library]MoveRight

Equivalent to pressing the Right key on the keyboard

> **Range**
>> Binary

> **Feedback**
>> Currently selected item changes

New in version 2.1.0.

[Library]MoveHorizontal

Move the specified number of locations left or right. Intended to be mapped to an encoder knob.

> **Range**
>> Relative (positive values move right, negative values move left)

> **Feedback**
>> Currently selected item changes

New in version 2.1.0.

[Library]MoveFocusForward

Equivalent to pressing the Tab key on the keyboard

> **Range**
>> Binary

> **Feedback**
>> Currently focused pane changes

New in version 2.1.0.

[Library]MoveFocusBackward

Equivalent to pressing the `Shift` + `Tab` key on the keyboard

> **Range**
>> Binary
>
> **Feedback**
>> Currently focused pane changes

New in version 2.1.0.

[Library]MoveFocus

Move focus the specified number of panes forward or backwards. Intended to be mapped to an encoder knob.

> **Range**
>> Relative (positive values move forward, negative values move backward)
>
> **Feedback**
>> Currently focused pane changes

New in version 2.1.0.

[Library]focused_widget

Read this control to know which library widget is currently focused, or write in order to focus a specific library widget.

This control can be used in controller scripts to trigger context-specific actions. For example, if the tracks table has focus, pressing a button loads the selected track to a specific deck, while the same button would clear the search if the search bar is focused.

Note: This control is useful only if a Mixxx window has keyboard focus, otherwise it always returns 0.

> **Range**

Value	write-able	Widget
0		none
1	X	Search bar
2	X	Tree view
3	X	Tracks table or root views of library features
4		Context menu (menus of library widgets or other editable widgets, or main menu bar)
5		Dialog (any confirmation or error popup, preferences, track properties or cover art window)
6		Unknown (widgets that don't fit into any of the above categories)

> **Feedback**
>> Currently focused widget changes

New in version 2.4.0.

[Library]GoToItem

Triggers different actions, depending on which interface element currently has keyboard focus:

Search bar	
text box	moves focus to tracks table
Clear button	clears search text
Sidebar	
collapsed node	expands the item (except Tracks and Auto DJ)
leaf node	moves focus to tracks table
Tracks table	Performs the action selected in *Preferences ▸ Library ▸ Track Double-Click Action* (default is "Load selected track"). Also see *Preferences ▸ Decks ▸ Playing track protection*
Context menus	presses Enter
Dialogs / popups	presses Enter. Note: the *Move..* controls allow to move button focus.

> **Range**
> > Binary

> **Feedback**
> > Context dependent

New in version 2.1.0.

[Library]show_track_menu

> Toggle the track context menu for all tracks selected in the current library view. The control value is *1* if there is already a menu shown for the current view. Note that the control is not aware of other track menus, for example those opened by right-clicking track text labels in decks. Only the most recent menu can be navigated with the *MoveUp/Down* controls.

> **Range**
> > Binary

> **Feedback**
> > Tracks table context menu is shown or hidden.

New in version 2.4.0.

[Library]AutoDjAddBottom

[Playlist]AutoDjAddBottom

> Add selected track(s) to Auto DJ Queue (bottom).

> **Range**
> > Binary

> **Feedback**
> > Append track(s) to Auto DJ playlist

New in version 2.0.0.

[Library]AutoDjAddTop

[Playlist]AutoDjAddTop

> Add selected track(s) to Auto DJ Queue (top).

> **Range**
> > Binary

> **Feedback**
> > Prepend track(s) to Auto DJ playlist

New in version 2.0.0.

[Library]font_size_increment

Increase the size of the library font. If the row height is smaller than the font-size the larger of the two is used.

> **Range**
>> Binary
>
> **Feedback**
>> Library view

New in version 2.0.0.

[Library]font_size_decrement

Decrease the size of the library font

New in version 2.0.0.

> **Range**
>> Binary
>
> **Feedback**
>> Library view

[Library]font_size_knob

Increase or decrease the size of the library font

New in version 2.0.0.

> **Range**
>> Relative
>
> **Feedback**
>> Library view

[Library]sort_column

Indicates the sorting column the track table

> **Range**

Value	Description	Library	Playlist	Crate	Browse
1	Artist	X	X	X	X
2	Title	X	X	X	X
3	Album	X	X	X	X

>   **Feedback**
>
>>   Sorting indicator in the column headers of the track table

New in version 2.3.0.

[Library]sort_column_toggle

>   Equivalent to clicking on column headers. A new value sets *[Library],sort_column* to that value and *[Library],sort_order* to 0, setting the same value again will toggle *[Library],sort_order*.
>
>   **Range**
>
>>   Same as for *[Library],sort_column* or value 0 for sorting according the current column with the cursor on it
>
>   **Feedback**
>
>>   Sorting indicator in the column headers of the track table

New in version 2.3.0.

[Library]sort_order

>   Indicate the sort order of the track tables.
>
>   **Range**
>
>>   Binary (0 for ascending, 1 for descending)
>
>   **Feedback**
>
>>   Sorting indicator in the column headers of the track table

New in version 2.3.0.

[Library]sort_focused_column

>   Sort the column of the table cell that is currently focused, which is equivalent to setting *[Library], sort_column_toggle* to 0. Though unlike that, it can be mapped to pushbuttons directly.
>
>   **Range**
>
>>   Binary
>
>   **Feedback**
>
>>   Sorting indicator in the column headers of the track table

New in version 2.4.0.

[Library]track_color_prev

Set color of selected track to previous color in palette.

> **Range**
>> Binary
>
> **Feedback**
>> Track color changes in the library view.

New in version 2.3.0.

[Library]track_color_next

Set color of selected track to next color in palette.

> **Range**
>> Binary
>
> **Feedback**
>> Track color changes in the library view.

New in version 2.3.0.

[Library]search_history_next

Select the next saved search query. Wraps around at the last item to the empty search.

> **Range**
>> Binary
>
> **Feedback**
>> Searchbox query changes

New in version 2.4.0.

[Library]search_history_prev

Select the previous saved search query. Wraps around at the top to the last item.

> **Range**
>> Binary
>
> **Feedback**
>> Searchbox query changes

New in version 2.4.0.

[Library]search_history_selector

Select another saved search query. < 0 goes up the list, > 0 goes down. Wraps around at the top and bottom.

> **Range**
>> -N / +N
>
> **Feedback**
>> Searchbox query changes

New in version 2.4.0.

[Library]clear_search

Clear the search.

> **Range**
>> Binary
>
> **Feedback**
>> Searchbox query is cleared

New in version 2.4.0.

See also:

The library section in the GUI can be enlarged by using the `[Skin],show_maximized_library` control.

The `[Skin],show_library_coverart` control can be used to toggle the display of library coverart.

16.5.10 The `[Shoutcast]` controls

`[Shoutcast]enabled`

> Shows if live Internet broadcasting is enabled.
>
> > **Range**
> > > ?
> >
> > **Feedback**
> > > shoutcast only supports mp3 format as field

`[Shoutcast]status`

> This control displays whether broadcasting connection to Shoutcast server was successfully established.
>
> > **Range**
> > > binary
> >
> > **Feedback**
> > > None

16.5.11 The `[Playlist]` controls

`[Playlist]` controls allow navigating the sidebar and tracks table directly without considering the currently focused widget. This is helpful when another application's window is focused. This group is going to be deprecated at some point, with its controls added to `[Library]` above.

See also:

See bug #1772184 for the current status.

`[Playlist]SelectPlaylist`

> Scrolls the given number of items (view, playlist, crate, etc.) in the side pane (can be negative for reverse direction).
>
> > **Range**

>
>   New in version 2.0.0.

`[Controls]AutoHotcueColors`

>   If enabled, colors will be assigned to newly created *hotcues* automatically.
>
>   > **Range**
>   >
>   > > binary
>   >
>   > **Feedback**
>   >
>   > > None
>
>   New in version 2.3.0.

`[Controls]ShowDurationRemaining`

>   Represents the current state of the remaining time duration display of the loaded track.
>
>   > **Range**

Value	Meaning
0	currently showing elapsed time, sets to remaining time
1	currently showing remaining time , sets to elapsed time
2	currently showing both (that means we are showing remaining, set to elapsed

>   > **Feedback**
>   >
>   > > None

16.5.13 The Effects Framework

In the list below,

- EffectRack1 leaves room for future expansion to multiple EffectRacks.

- N ranges from 1 to `[EffectRack1],num_effectunits`, inclusive.

- M ranges from 1 to `[EffectRack1_EffectUnitN],num_effectslots`, inclusive. (For a given value of N)

- K ranges from 1 to `[EffectRack1_EffectUnitN_EffectM],num_parameters`, inclusive. (For given values of N and M)

- I ranges from 1 to `[App],num_decks`, inclusive.

- J ranges from 1 to `[App],num_samplers`, inclusive.

New in version 2.0.0.

16.5. Mixxx Controls 185

Linking Values

Effect parameters can be linked to the effect's metaknob. This linkage can be user-controlled by changing the
`link_type` and the `link_inverse` control of the parameter. The default link type is loaded from the effect param-
eter's manifest's `linkHint` property.

Link Type	Integer Value	Interpretation
None	0	Not controlled by the metaknob
Linked	1	Controlled by the metaknob as it is
Linked Left	2	Controlled by the left side of the metaknob
Linked Right	3	Controlled by the right side of the metaknob
Linked Left Right	4	Controlled by both sides of the metaknob

Link Inverse	Integer Value	Interpretation
Normal	0	Linked in equal relation
Inverse	1	Linked in an inverse relation.

EQs and Filters

Equalizers and filters are special effects units. The EQs are controlled by `[Equalizer-
Rack1_[ChannelI]_Effect1]` and the filter knob is controlled by *[QuickEffectRack1_[ChannelI]],
super1* and *[QuickEffectRack1_[ChannelI]_Effect1],enabled*. Users can choose between several
options for the effects loaded in these racks in the Equalizers section of the Preferences window.

Controls

[EffectRack1]num_effectunits

[EqualizerRack1]num_effectunits

[QuickEffectRack1]num_effectunits

> The number of EffectUnits in this rack
>
> > **Range**
> > > integer, read-only

[EffectRack1_EffectUnitN]chain_preset_selector

[EqualizerRack1_[ChannelI]]loaded

[QuickEffectRack1_[ChannelI]]loaded

> Whether an EffectChain is loaded into the EffectUnit
>
> > **Range**
> >
> > > binary, read-only

[EffectRack1_EffectUnitN]loaded_chain_preset

[EqualizerRack1_[ChannelI]]loaded_chain_preset

[QuickEffectRack1_[ChannelI]]loaded_chain_preset

> 0-based index of the currently loaded EffectChain preset. *0* is the empty/passthrough preset, *-1* indicates an unsaved preset (default state of *[EffectRack1_EffectUnitN]*).

Range
integer, -1 .. [*num_chain_presets* - 1]

[EffectRack1_EffectUnitN]mix

[EqualizerRack1_[ChannelI]]mix

[QuickEffectRack1_[ChannelI]]mix

The dry/wet mixing ratio for this EffectChain with the EngineChannels it is mixed with

This is a *ControlPotMeter control*.

Range
0.0..1.0

[EffectRack1_EffectUnitN]next_chain_preset

[EqualizerRack1_[ChannelI]]next_chain_preset

[QuickEffectRack1_[ChannelI]]next_chain_preset

Cycle to the next EffectChain preset after the currently loaded preset.

Range
binary

[EffectRack1_EffectUnitN]num_chain_presets

[EqualizerRack1_[ChannelI]]num_chain_presets

[QuickEffectRack1_[ChannelI]]num_chain_presets

The number of effect chain presets available in this EffectUnit, including the empty/passthrough preset "---".

Range
integer, read-only, >=1

[EffectRack1_EffectUnitN]num_effectslots

[EqualizerRack1_[ChannelI]]num_effectslots

[QuickEffectRack1_[ChannelI]]num_effectslots

The number of effect slots available in this EffectUnit.

Range
integer, read-only

[EffectRack1_EffectUnitN]prev_chain_preset

[EqualizerRack1_[ChannelI]]prev_chain_preset

[QuickEffectRack1_[ChannelI]]prev_chain_preset

Cycle to the previous EffectChain preset before the currently loaded preset.

Range
binary

[EffectRack1_EffectUnitN]show_focus

[EqualizerRack1_[ChannelI]]show_focus

[QuickEffectRack1_[ChannelI]]show_focus

Whether to show focus buttons and draw a border around the focused effect in skins. This should not be manipulated by skins; it should only be changed by controller mappings.

Range
binary

[EffectRack1_EffectUnitN]show_parameters

[EqualizerRack1_[ChannelI]]show_parameters

[QuickEffectRack1_[ChannelI]]show_parameters

> **Range**
> > binary

> Whether to show all the parameters of each effect in skins or only show metaknobs.

[EffectRack1_EffectUnitN]super1

[EqualizerRack1_[ChannelI]]super1

[QuickEffectRack1_[ChannelI]]super1

> The EffectChain superknob. Moves the metaknobs for each effect in the chain.

> This is a *ControlPotMeter control*.

> **Range**
> > 0.0..1.0

[EffectRack1_EffectUnitN_EffectM]clear

[EqualizerRack1_[ChannelI]_Effect1]clear

[QuickEffectRack1_[ChannelI]_Effect1]clear

> Clear the currently loaded Effect in this Effect slot from the EffectUnit.

> **Range**
> > binary

[EffectRack1_EffectUnitN_EffectM]effect_selector

[EqualizerRack1_[ChannelI]_Effect1]effect_selector

[QuickEffectRack1_[ChannelI]_Effect1]effect_selector

> Select Effect – >0 goes one forward, <0 goes one backward.

> **Range**

[EffectRack1_EffectUnitN_EffectM]loaded_effect

[EqualizerRack1_[ChannelI]_Effect1]loaded_effect

[QuickEffectRack1_[ChannelI]_Effect1]loaded_effect

> 0-based index of the currently loaded effect preset, including the empty/passthrough preset "---".

> **Range**
> > integer, 0 .. [*num_effectsavailable* - 1]

[EffectRack1_EffectUnitN_EffectM]next_effect

[EqualizerRack1_[ChannelI]_Effect1]next_effect

[QuickEffectRack1_[ChannelI]_Effect1]next_effect

 Cycle to the next effect after the currently loaded effect.

  Range

   binary

[EffectRack1_EffectUnitN_EffectM]num_parameters

[EqualizerRack1_[ChannelI]_Effect1]num_parameters

[QuickEffectRack1_[ChannelI]_Effect1]num_parameters

 The number of parameters the currently loaded effect has.

  Range

   integer, read-only, 0 if no effect is loaded

[EffectRack1_EffectUnitN_EffectM]num_parameterslots

[EqualizerRack1_[ChannelI]_Effect1]num_parameterslots

[QuickEffectRack1_[ChannelI]_Effect1]num_parameterslots

 The number of parameter slots available.

  Range

   integer, read-only

[EffectRack1_EffectUnitN_EffectM]num_button_parameters

[EqualizerRack1_[ChannelI]_Effect1]num_button_parameters

[QuickEffectRack1_[ChannelI]_Effect1]num_button_parameters

 The number of button parameters the currently loaded effect has.

  Range

   integer, read-only, 0 if no effect is loaded

[EffectRack1_EffectUnitN_EffectM]num_button_parameterslots

[EqualizerRack1_[ChannelI]_Effect1]num_button_parameterslots

[QuickEffectRack1_[ChannelI]_Effect1]num_button_parameterslots

 The number of button parameter slots available.

  Range

   integer, read-only

[EffectRack1_EffectUnitN_EffectM]meta

[EqualizerRack1_[ChannelI]_Effect1]meta

[QuickEffectRack1_[ChannelI]_Effect1]meta

 Controls the parameters that are linked to the metaknob.

 This is a *ControlPotMeter control*.

  Range

   0..1

[EffectRack1_EffectUnitN_EffectM]prev_effect

[EqualizerRack1_[ChannelI]_Effect1]prev_effect

[QuickEffectRack1_[ChannelI]_Effect1]prev_effect

 Cycle to the previous effect before the currently loaded effect.

  Range

   binary

[EffectRack1_EffectUnitN_EffectM]parameterK

[EqualizerRack1_[ChannelI]_Effect1]parameterK

[QuickEffectRack1_[ChannelI]_Effect1]parameterK

> The scaled value of the Kth parameter. See the Parameter Values section for more information.
>
> This is a *ControlPotMeter control*.
>
> > **Range**
> > double

[EffectRack1_EffectUnitN_EffectM]parameterK_link_inverse

[EqualizerRack1_[ChannelI]_Effect1]parameterK_link_inverse

[QuickEffectRack1_[ChannelI]_Effect1]parameterK_link_inverse

> The link direction of the Kth parameter to the effect's metaknob.
>
> > **Range**
> > bool

[EffectRack1_EffectUnitN_EffectM]parameterK_link_type

[EqualizerRack1_[ChannelI]_Effect1]parameterK_link_type

[QuickEffectRack1_[ChannelI]_Effect1]parameterK_link_type

> The link type of the Kth parameter to the effects's metaknob.
>
> > **Range**
> > enum

[EffectRack1_EffectUnitN_EffectM]parameterK_loaded

[EqualizerRack1_[ChannelI]_Effect1]parameterK_loaded

[QuickEffectRack1_[ChannelI]_Effect1]parameterK_loaded

> Whether or not the Kth parameter slot has an effect parameter loaded into it.
>
> > **Range**
> > binary, read-only

[EffectRack1_EffectUnitN_EffectM]parameterK_type

[EqualizerRack1_[ChannelI]_Effect1]parameterK_type

[QuickEffectRack1_[ChannelI]_Effect1]parameterK_type

> The type of the Kth parameter value. See the Parameter Value Types table.
>
> > **Range**
> > integer, read-only

[EffectRack1_EffectUnitN_EffectM]button_parameterK

[EqualizerRack1_[ChannelI]_Effect1]button_parameterK

[QuickEffectRack1_[ChannelI]_Effect1]button_parameterK

> The value of the Kth parameter. See the Parameter Values section for more information.
>
> > **Range**
> > double

[EffectRack1_EffectUnitN_EffectM]button_parameterK_loaded

[EqualizerRack1_[ChannelI]_Effect1]button_parameterK_loaded

[QuickEffectRack1_[ChannelI]_Effect1]button_parameterK_loaded

> Whether or not the Kth parameter slot has an effect parameter loaded into it.

Range
> binary, read-only

[EffectRack1_EffectUnitN_EffectM]button_parameterK_type

[EqualizerRack1_[ChannelI]_Effect1]button_parameterK_type

[QuickEffectRack1_[ChannelI]_Effect1]button_parameterK_type

> The type of the Kth parameter value. See the Parameter Value Types table.

> **Range**
> > integer, read-only

See also:

The *[EffectRack1],show* control can be used to show and hide the effect section in the GUI.

16.5.14 The `[Skin]` group

The `[Skin]` group contains controls that are used to selective show and hide parts of the *graphical user interface* of Mixxx to suit your needs.

Note: Some skins may not support some or all of these controls. In this case, triggering the unsupported control will do nothing.

[Skin]show_effectrack

> Toggle the display of the effect rack in the *user interface*.

> **Range**
> > binary

> **Feedback**
> > Effect rack is shown/hidden.

> New in version 2.4.0: Replaces the deprecated *[EffectRack1],show* control.

[Skin]show_library_coverart

> Toggle the display of cover art in the library section of the *user interface*.

> **Range**
> > binary

> **Feedback**
> > Cover art in the library is shown/hidden.

> New in version 2.4.0: Replaces the deprecated *[Library],show_coverart* control.

[Skin]show_maximized_library

> Toggle maximized view of library section of the *user interface*.

> **Range**
> > binary

> **Feedback**
> > The library section of the user interface is enlarged/shrunk.

> New in version 2.4.0: Replaces the deprecated *[Master],maximize_library* control.

[Skin]show_samplers

> Toggle the display of sampler banks in the *user interface*.
>
> > **Range**
> > > binary
> >
> > **Feedback**
> > > Sampler banks are shown/hidden.
>
> New in version 2.4.0: Replaces the deprecated *[Samplers],show_samplers* control.

[Skin]show_vinylcontrol

> Toggle the *vinyl control* section in the *user interface*.
>
> > **Range**
> > > binary
> >
> > **Feedback**
> > > Vinyl controls are shown/hidden.
>
> New in version 2.4.0: Replaces the deprecated *[VinylControl],show_vinylcontrol* control.

16.5.15 Deprecated controls

These controls have been deprecated and may be removed in a future version of Mixxx. In the meantime, skins and controller mappings that still use them will keep working, but using the suggested alternatives is strongly recommended.

[Master]num_decks

> The number of decks currently enabled.
>
> > **Range**
> > > integer
> >
> > **Feedback**
> > > None
>
> New in version 1.9.0.
>
> Deprecated since version 2.4.0: Use *[App],num_decks* instead.

[Master]num_samplers

> The number of samplers currently enabled.
>
> > **Range**
> > > integer
> >
> > **Feedback**
> > > None
>
> New in version 1.9.0.
>
> Deprecated since version 2.4.0: Use *[App],num_samplers* instead.

[Master]num_preview_decks

> The number of preview decks currently enabled.
>
> > **Range**
> > > integer
> >
> > **Feedback**
> > > None

New in version 1.9.0.

Deprecated since version 2.4.0: Use *[App],num_preview_decks* instead.

[Master]num_microphones

    The number of microphone inputs that can be configured.

        Range
            integer

        Feedback
            None

    New in version 2.2.4.

    Deprecated since version 2.4.0: Use *[App],num_microphones* instead.

[Master]num_auxiliaries

    The number of auxiliary inputs that can be configured.

        Range
            integer

        Feedback
            None

    New in version 2.2.4.

    Deprecated since version 2.4.0: Use *[App],num_auxiliaries* instead.

[Master]samplerate

    The current output sample rate (default: 44100 Hz).

        Range
            absolute value (in Hz)

        Feedback
            None

        Deprecated since version 2.4.0: Use *[App],samplerate* instead.

[Master]headVolume

    Adjust headphone volume.

        Range
            0.0..1.0..5.0

        Feedback
            Headphone Gain knob

    Deprecated since version 2.0.0: Use *[Master],headGain* instead.

[Master]volume

    Adjust main volume.

        Range
            0.0..1.0..5.0

        Feedback
            Main Gain knob

    Deprecated since version 2.0.0: Use *[Master],gain* instead.

[Master]maximize_library

    Toggle maximized view of library.

        Range

            binary

        Feedback

            Toggle maximized view of library

    New in version 2.0.0.

    Deprecated since version 2.4.0: Use `[Skin],show_maximized_library` instead.

[Samplers]show_samplers

        Range

            binary

        Feedback

            Shows Sampler bank(s)

    Deprecated since version 2.4.0: Use `[Skin],show_samplers` instead.

[VinylControl]show_vinylcontrol

    Toggle the vinyl control section in skins.

        Range

            binary

        Feedback

            Vinyl controls are shown

    New in version 1.10.0.

    Deprecated since version 2.4.0: Use `[Skin],show_vinylcontrol` instead.

[Library]show_coverart

    Toggle the Cover Art in Library

        Range

            Binary

    Deprecated since version 2.4.0: Use `[Skin],show_library_coverart` instead.

[EffectRack1]show

    Show the Effect Rack

        Range

            binary

    Deprecated since version 2.4.0: Use `[Skin],show_effectrack` instead.

[ChannelN]hotcue_X_enabled

[PreviewDeckN]hotcue_X_enabled

[SamplerN]hotcue_X_enabled

    Indicates if *hotcue* slot X is set, active or empty.

        Range (read-only)

Value	Meaning
0	Hotcue X is not set
1	Hotcue X is set
2	Hotcue X is active (saved loop is enabled or hotcue is previewing)

New in version 1.8.0.

Changed in version 2.4.0: Added support for "active" state.

Deprecated since version 2.4.0: Use *[ChannelN],hotcue_X_status* instead.

[ChannelN]sync_master

[PreviewDeckN]sync_master

[SamplerN]sync_master

Sets deck as leader clock.

>   **Range**
>   binary
>
>   **Feedback**
>   If enabled, the *Sync* button stays lit and *tempo* slider snap to the appropriate value. Slider adjustments are linked on all decks that have *sync lock* enabled.

New in version 2.0.0.

Changed in version 2.3.0: This button just enables *sync lock* mode (similar to *[ChannelN],sync_enabled*), it does not actually guarantee the deck will be the sync leader. This will be fixed in a future version. .. deprecated:: 2.4.0 Use *[ChannelN],sync_leader*, *[PreviewDeckN],sync_leader* and *[SamplerN], sync_leader* instead.

[ChannelN]beatloop

[PreviewDeckN]beatloop

[SamplerN]beatloop

Setup a loop over the set number of beats.

>   **Range**
>   positive real number
>
>   **Feedback**
>   A loop is shown over the set number of beats.

Deprecated since version 2.1.0: Use *[ChannelN],beatloop_size* and *[ChannelN],beatloop_toggle* instead.

[ChannelN]reloop_exit

[PreviewDeckN]reloop_exit

[SamplerN]reloop_exit

Toggles the current loop on or off. If the loop is ahead of the current play position, the track will keep playing normally until it reaches the loop.

>   **Range**
>   binary
>
>   **Feedback**
>   Loop range in waveform activates or deactivates.

Deprecated since version 2.1.0: Use *[ChannelN],reloop_toggle* instead.

[ChannelN]jog

[PreviewDeckN]jog

[SamplerN]jog

Affects relative playback speed and direction for short instances (additive & is automatically reset to 0).

>   **Range**
>   -3.0..3.0

> **Feedback**
>> waveform

Deprecated since version ??: Use the JavaScript `engine.scratch` functions instead.

`[ChannelN]scratch`

`[PreviewDeckN]scratch`

`[SamplerN]scratch`

> Affects playback speed and direction (differently whether currently playing or not) (multiplicative).
>
>> **Range**
>>> -3.0..3.0
>>
>> **Feedback**
>>> Waveform

Deprecated since version ??: Use the JavaScript `engine.scratch` functions instead.

`[ChannelN]filter`

`[PreviewDeckN]filter`

`[SamplerN]filter`

> Toggles the filter effect.
>
>> **Range**
>>> binary
>>
>> **Feedback**
>>> Filter button

New in version 2.0.0.

Deprecated since version 2.0.0: Use *`[QuickEffectRack1_[ChannelN]_Effect1],enabled`* instead.

`[ChannelN]filterDepth`

`[PreviewDeckN]filterDepth`

`[SamplerN]filterDepth`

> Adjusts the intensity of the filter effect.
>
>> **Range**
>>> default
>>
>> **Feedback**
>>> Filter depth knob

New in version 2.0.0.

Deprecated since version 2.0.0: Use *`[QuickEffectRack1_[ChannelN]],super1`* instead.

`[ChannelN]filterLow`

`[PreviewDeckN]filterLow`

`[SamplerN]filterLow`

> Adjusts the gain of the low *EQ* filter.
>
>> **Range**
>>> 0.0..1.0..4.0
>>
>> **Feedback**
>>> Low EQ knob

Deprecated since version 2.0.0: Use *`[EqualizerRack1_[ChannelN]_Effect1],parameter1`* instead.

[ChannelN]filterLowKill

[PreviewDeckN]filterLowKill

[SamplerN]filterLowKill

> Holds the gain of the low *EQ* to -inf while active
>
> > **Range**
> > > binary
> >
> > **Feedback**
> > > Low EQ *kill switch*
>
> Deprecated since version 2.0.0: Use *[EqualizerRack1_[ChannelI]_Effect1],* *button_parameter1* instead.

[ChannelN]filterMid

[PreviewDeckN]filterMid

[SamplerN]filterMid

> Adjusts the gain of the mid *EQ* filter..
>
> > **Range**
> > > 0.0..1.0..4.0
> >
> > **Feedback**
> > > Mid EQ knob
>
> Deprecated since version 2.0.0: Use *[EqualizerRack1_[ChannelI]_Effect1],parameter2* instead.

[ChannelN]filterMidKill

[PreviewDeckN]filterMidKill

[SamplerN]filterMidKill

> Holds the gain of the mid *EQ* to -inf while active.
>
> > **Range**
> > > binary
> >
> > **Feedback**
> > > Mid EQ *kill switch*
>
> Deprecated since version 2.0.0: Use *[EqualizerRack1_[ChannelI]_Effect1],* *button_parameter2* instead.

[ChannelN]filterHigh

[PreviewDeckN]filterHigh

[SamplerN]filterHigh

> Adjusts the gain of the high *EQ* filter.
>
> > **Range**
> > > 0.0..1.0..4.0
> >
> > **Feedback**
> > > High EQ knob
>
> Deprecated since version 2.0.0: Use *[EqualizerRack1_[ChannelI]_Effect1],parameter3* instead.

[ChannelN]filterHighKill

[PreviewDeckN]filterHighKill

[SamplerN]filterHighKill

Holds the gain of the high *EQ* to -inf while active.

> **Range**
>> binary
>
> **Feedback**
>> High EQ *kill switch*

Deprecated since version 2.0.0: Use *[EqualizerRack1_[ChannelI]_Effect1], button_parameter3* instead.

[ChannelN]beatloop_X

[PreviewDeckN]beatloop_X

[SamplerN]beatloop_X

Setup a loop over X beats. A control exists for X = 0.03125, 0.0625, 0.125, 0.25, 0.5, 1, 2, 4, 8, 16, 32, 64

> **Range**
>> toggle
>
> **Feedback**
>> A loop is shown over X beats.

New in version 1.10.0.

Deprecated since version 2.0.0: Use *[ChannelN],beatloop_X_activate* instead.

[MicrophoneN]enabled

[AuxiliaryN]enabled

1 if a channel input is enabled, 0 if not.

> **Range**
>> binary
>
> **Feedback**
>> Microphone is enabled.

New in version 1.10.0.

Deprecated since version 2.0.0: Use *[MicrophoneN],input_configured* instead.

[MicrophoneN]master

[AuxiliaryN]master

Hold value at 1 to mix channel input into the main output. For [MicrophoneN] use *[MicrophoneN], talkover* instead. Note that [AuxiliaryN] also take *[AuxiliaryN],orientation* into account.

> **Range**
>> binary
>
> **Feedback**
>> Auxiliary: Play button Microphone: N/A

Deprecated since version 2.4.0: Use *[MicrophoneN],talkover* and *[AuxiliaryN],main_mix* instead.

[MicrophoneN]orientation

New in version 1.10.0.

Deprecated since version 1.10.0: The control is not processed in the Mixer, which is also why there are no orientation controls for Microphones in the GUI.

[Playlist]LoadSelectedIntoFirstStopped

Loads the currently highlighted song into the first stopped deck

Deprecated since version 2.1.0: Use *[Library],GoToItem* instead.

[Playlist]SelectNextPlaylist

Switches to the next view (Library, Queue, etc.)

Deprecated since version 2.1.0: Use *[Library],MoveDown* instead.

[Playlist]SelectPrevPlaylist

> **range**
>> binary
>
> **feedback**
>> Library sidebar

Switches to the previous view (Library, Queue, etc.)

> Deprecated since version 2.1.0: Use *[Library],MoveUp* instead.

[Playlist]ToggleSelectedSidebarItem

Toggles (expands/collapses) the currently selected sidebar item.

New in version 1.11.0.

Deprecated since version 2.1.0: Use *[Library],GoToItem* instead.

[Playlist]SelectNextTrack

Scrolls to the next track in the track table.

Deprecated since version 2.1.0: Use *[Library],MoveDown* instead.

[Playlist]SelectPrevTrack

Scrolls to the previous track in the track table.

Deprecated since version 2.1.0: Use *[Library],MoveUp* instead.

[EffectRack1_EffectUnitN]next_chain

[EqualizerRack1_[ChannelI]]next_chain

[QuickEffectRack1_[ChannelI]]next_chain

Cycle to the next EffectChain preset after the currently loaded preset.

Deprecated since version 2.4.0: Use *[EffectRack1_EffectUnitN],next_chain_preset* instead.

[EffectRack1_EffectUnitN]prev_chain

[EqualizerRack1_[ChannelI]]prev_chain

[QuickEffectRack1_[ChannelI]]prev_chain

Cycle to the next EffectChain preset after the currently loaded preset.

Deprecated since version 2.4.0: Use *[EffectRack1_EffectUnitN],prev_chain_preset* instead.

[EffectRack1_EffectUnitN]chain_selector

[EqualizerRack1_[ChannelI]]chain_selector

[QuickEffectRack1_[ChannelI]]chain_selector

Select EffectChain preset. > 0 goes one forward; < 0 goes one backward.

Deprecated since version 2.4.0: Use *[EffectRack1_EffectUnitN],chain_preset_selector* instead.

16.5.16 Removed controls

These controls have been removed from Mixxx. Skins and controller mappings that attempt to use them will not work correctly.

[ChannelN]flanger

>   Toggles the flanger effect.
>
>   Deprecated since version 2.0.0: This control has been **removed** without a direct replacement. Use the *effects framework* instead.

[ChannelN]Hercules1

[ChannelN]Hercules2

[ChannelN]Hercules3

[ChannelN]Hercules4

>   Deprecated since version ??: This control has been **removed**.

[ChannelN]NextTask

>   Deprecated since version ??: This control has been **removed**.

[ChannelN]NextTrack

>   Deprecated since version ??: This control has been **removed**.

[ChannelN]PrevTask

>   Deprecated since version ??: This control has been **removed**.

[ChannelN]PrevTrack

>   Deprecated since version ??: This control has been **removed**.

[ChannelN]transform

>   Deprecated since version ??: This control has been **removed**.

[Flanger]lfoDepth

>   Adjusts the intensity of the flange effect
>
>   Deprecated since version 2.0.0: This control has been **removed** without a direct replacement. Use the *effects framework* instead.

[Flanger]lfoDelay

>   Adjusts the phase delay of the flange effect in microseconds
>
>   Deprecated since version 2.0.0: This control has been **removed** without a direct replacement. Use the *effects framework* instead.

[Flanger]lfoPeriod

>   Adjusts the wavelength of the flange effect in microseconds
>
>   Deprecated since version 2.0.0: This control has been **removed** without a direct replacement. Use the *effects framework* instead.

[EffectRack1]clear

[EqualizerRack1]clear

[QuickEffectRack1]clear

>   Clear the Effect Rack
>
>   Deprecated since version 2.4.0: This control has been **removed** without a direct replacement. Use the *effects framework* instead.

16.6 The Mixxx Settings Directory

The Mixxx settings directory contains all user data and settings of your Mixxx installation. If you want to make a backup of your library and all preferences copy the entire directory to a safe place.

16.6.1 Location

You can navigate to the settings directory location manually as described below. Since Mixxx 2.3 you can also open this directory in your file browser from within Mixxx: go to *Preferences ‣ Library*, scroll to the bottom of the page and click on *Open Mixxx Settings Directory*.

Hint: On Windows, the `AppData` folder is hidden, as well as all files and directories beginning with a dot '.' on Linux. So if you have not already, you will need to set your file manager to show hidden files and folders.

Windows

> `%LOCALAPPDATA%\Mixxx`
>
> Copy this and paste it into the location bar of a Computer or Folder window.
>
> `%LOCALAPPDATA%` is then resolved to `C:\Users\<your-username>\AppData\Local`
>
> Use `%USERPROFILE%\Local Settings\Application Data\Mixxx` if you want to migrate your settings from XP or earlier.

macOS

> Mixxx 2.3: `~/Library/Containers/org.mixxx.mixxx/Data/Library/Application Support/Mixxx`
>
> Mixxx 2.2 and earlier: `~/Library/Application Support/Mixxx`

Linux

> For distribution packages, or Mixxx installed from source:
>
> `~/.mixxx/`
>
> This resolves to `/home/<your-username>/.mixxx`
>
> For Flatpak:
>
> `~/.var/app/org.mixxx.Mixxx/.mixxx`

16.6.2 Content

analysis
> This contains all waveform analysis data. This is used to compose a track's scrolling waveform and track overview. If not existent, this data will be recreated each time a track is loaded into a Mixxx deck. Thus it does not belong to the essential data that needs to be backed up.

broadcast_profiles
> All broadcast profiles you have configured.

controllers

All controller mappings you stored. This can be downloaded and *self-built mappings*, as well as built-in mappings that you modified in *Preferences > Controllers > YourController* manually or with the MIDI Wizard.

effects.xml

The current configuration of the 4 effect units, incl. the state of all controls.

mixxx.cfg

Everything you configured in the Preferences, deck settings, skin settings, AutoDJ configuration, effect routing etc.

mixxx.log[.NN]

Log files of the last few Mixxx sessions, with `mixxx.log` being the most recent one, followed by `mixxx.log.1` etc.

mixxxdb.sqlite

The Mixxx library database. All track locations, all track metadata, saved cues, loops, colors, playlists, crates, …

samplers.xml

Stores tracks currently loaded to sample decks.

sandbox.cfg

This is used under macOS to track which files Mixxx will have access to

soundconfig.xml

Sound device configuration from Preferences > Sound Hardware

16.7 Additional Resources

Got questions? Need more information? Want to *contribute*? There are a variety of other resources where you can find out more:

- **Mixxx Website**: For general information and updates, as well as the latest news on Mixxx, go to: https://mixxx.org

- **Mixxx Wiki**: For up-to-date information about supported DJ hardware, documentation on making controller mappings, and other tips and tricks, go to: https://github.com/mixxxdj/mixxx/wiki

- **Keyboard Shortcuts**: This a list for all default Mixxx keyboard shortcuts. Please note that these shortcuts are for keyboards configured in English layout and default shortcuts may be different if your language setting is not English. *default keyboard mappings*

- **Mixxx Community Forums**: To search for answers, post your question or answer other DJ's questions, go to: https://mixxx.org/forums

- **Mixxx Zulip Chat**: Hang out with Mixxx developers and users on our Zulip chat. Stand-alone apps for Zulip can be configured to use the server `mixxx.zulipchat.com`.

- **Mixxx Source Code**: To download the source code for Mixxx, go to: https://github.com/mixxxdj/mixxx

- **Mixxx Bug Tracker**: To report a bug or request a feature, go to: https://github.com/mixxxdj/mixxx/issues

- **Mixxx Translations**: To translate Mixxx and promote your mother tongue, go to: https://www.transifex.com/mixxx-dj-software/public/. Please read the Translation FAQ first.

- **Social Media**: Follow us on Mastodon, Twitter, and Facebook.

16.8 Changelog

16.8.1 2.4.1 (unreleased)

Controller Mappings

- Hercules Inpulse 200: Configure shift-browser knob to scroll the library (quick) #12932
- Pioneer DDJ-FLX4: Add waveform zoom and other mapping improvements #12896 #12842
- Traktor Kontrol F1: Fixes for hid-parser and related script #12876
- Traktor S3: Fix mapping crash on macOS #12840

Target Support

- Fix various minor build issues #12853 #12847 #12822 #12892

Miscellaneous

- Remove unnecessary unpolish operation of the style, before polish the new style #12445
- Developer Tools: Initially sort controls by group name, ascending #12884
- History: Show track count and duration in sidebar #12811
- Prevent removing tracks from locked playlists #12927

16.8.2 2.4.0 (2024-02-16)

Music Library: Tracks Table & Track Menu

- Remember track selection when switching library features, fix initial selection etc. #4177 #4536 #12321 #12064 #11196 #11130
- Add new library column that shows the last time a track was played #3140 #3457 #3494 #3596 #3740
- Add keyboard shortcut Ctrl+Enter to open track properties #4347
- Home/End keys jump to first/last row #4850
- Wrap selection around at the bottom/top, only if Shift is not pressed #11090 #11100 #12391
- Allow to hide/remove tracks from the library by pressing the Delete key #4330 #7176 #9793 #9837 #10537 #11239 #4577 #10577 #11171 #10761
- Fix Recording table refresh issues #4648
- Show time in addition to the date in the timestamp column #4900 #10726 #11020
- Show only the date in Date Added / Last Played columns. Move the time of day to tooltips #3945
- Right-align BPM, duration & bitrate values #11634 #11668 #11657
- Remove parenthesis from play counter display #11357
- Refocus library, after editing skin controls #11767
- Fix performance with large playlists #11851 #11724

- Add multi-line editor delegate for comment column #11752

- Keep current item visible when the view shrinks vertically #11273

- macOS scrollbar: Make sure last track is shown in library #11669 #9495

- Add action to select loaded track in library #4740

- Add menu for Analyze and Reanalyze #4806 #11873 #11872

- Add support for overriding analyzis settings about variable/constant BPM on a per-track basis #10931

- Add menu for looking up track metadata at Discogs, SoundCloud and LastFM #4772 #4836

- Add "Delete Track Files" action, does "Move to Trash" with Qt >= 5.15 #4560 #4831 #10763 #11580 #11577 #11583 #3212 #11842

- Allow to clear the comment field #4722 #10615

- Allow to reset loops and also via "[ChannelN], loop_remove" control object #4802 #10748 #12392 #12521

- Add 'Update ReplayGain' decks' to track menus #4031 #4719

- Restore "Remove from playlist" in History #11591 #10974

- Enable Lock BPM action if any selected track BPM is unlocked #12385

- Order BPM action by factor, show peview (for single track) #12701 #10128

- Provide the same features in all deck track menus #12214

- Track table header: Keep menu open after toggling a checkbox #12218

Music Library: Sidebar & Searchbar

- Add F2 and Del/Backspace shortcuts for renaming & deleting playlists and crates #11172 #11235 #4697 #4700 #10294

- Improve presentation of the History library tree #2996 #4298 #10533

- History: Fix sidebar context menu actions #4384 #4297 #10529

- History: Add cleanup options #4726 #9259 #10714

- History: Fix update of play count after removing tracks #12258 #12046 #12256

- Improve UX with right-click and selection after add, rename, delete, duplicate etc. #11208 #4193 #10488 #11574 #11208 #11712

- Map Left Arrow Key to jump to parent node and activates it #4253

- Crates: only store or activate sibling crate if it's valid #11770 #11769

- Add recent searches to a drop down menu of the search box #3171 #3262 #4505

- Save search queries across restarts #4458 #10517 #10561 #4571

- Enable search in Browse & Recording views #11014 #11012 #4382

- Update Clear button when search is disabled #4447

- Fix reset to default of search timeout in preferences #4504 #10589

- Ctrl+F in focused search box selects the entire search string #4515

- Improve keypress handling, fix glitch in popup, strip whitespaces #4658

- Enter jumps to track table if search query was transmitted #4844 Push completion entry to top, to make up/down behave naturally

- Remove ESC shortcut in favour of new `[Library],focused_widget` #4571 #11030 #10975

- Restore previous search term when switching between playlists and crates #11129 #11015 #11477 #11476

- Add options to disable auto-completion and history #10942 #10634

- Require Enter or Right key to search for auto completed strings #11207 #11289 #11287

- Allow to use := and quotes to find exact matches #12063 #10699

Music Library: Backend & Database

- Add new "[AutoDJ],add_random_track" to make this feature accessible from controllers #3076

- Don't store or update metadata of missing tracks in the Mixxx database to prevent inconsistencies with file tags #3811

- Update library schema to 37 for synchronizing file modified time with track source on metadata import/export #3978 #4012

- Track Metadata: Fix synchronization (import/export) of file tags #4628 #4631 #4847 #10782

- Track Metadata: Do not overwrite unchanged multi-valued fields #12613 #12587

- Optionally reset metadata on reimport if file tags are missing, enabled by "[Library] ResetMissingTagMetadataOnImport 1"). #4873

- Logging: Suppress expected and harmless schema migration errors #4248

- Fix handling of undefined BPM values #4062 #4063 #4100 #4154 #4165 #4168

- Automatic analyze and optimize database #4199

- Re-import and update metadata after files have been modified when loading tracks #4218

- Re-enable shortcuts after editing controls #4360 #10184 #10523

- Allow to remove a track form the disk #3212 #4639

- Fix accasional resetting of played counter in database #4578 #10617

- Experimental: Fix writing of undefined MusicBrainz Recording ID #4694

- Traktor library: fix importing track key #4701

- Fix exporting m3u files with tracks and special characters by using the URL format #4752

- Library Scanner: Sort files before adding them #10919

- Library Scanner: Fix track relocation query #12462

- MenuBar: Add shortcut for rescanning library #11136

- Playlists: simplify import function, add whitespace before the # suffix #12246

- Destroy PlayerInfo after EngineRecord is stopped to fix a debug assertion #12341 #12242

- iTunes: Modularize importer and use `iTunesLibrary` on macOS for compatibility with `Music.app` #11353 #11256 #11446 #11444 #11503 #11500 #11509

- iTunes: Fix sporadic crash during unit tests due to a not initialized reference. #11666

- iTunes: Permit duplicate playlist names by identifying playlists by id (rather than name) #11794

- iTunes: Re-enable test and add `composer`, `playCount`, `lastPlayedAt` and `dateAdded` to model #11948

- Fix setting the wrong default cue color #11554 #11260

- Ensure that tracks with an invalid BPM are re-analyzed #2776

- Add support for exporting crates, playlists and the library to Engine Prime and Denon standalone controllers #2753 #2932 #3102 #3155 #3621 #3776 #3787 #3797 #3798 #4025 #4087 #4102 #4143 #4463 #11815 #12309 #12005 #11816 #11720 #11834 #12452 #11979

- Rekordbox: Save all loops and correct AAC timing offset for CoreAudio #2779

- Rekordbox: Fix missing playlists due to invalid child ID #10955

- Rekordbox: Fix unhandled exception when parsing corrupt PDB files #10452 #4040

- Improve log messages during schema migration #2979

- Search related tracks in collection #3181 #3213 #2796 #4207

Sync

- Add support for setting an explicit leader for sync lock #2768 #3099 #3695 #3734 #3698 #3864 #3867 #3921 #4119 #4135 #4149 #4276 #3944 #11828 #11831 #11829 #12431 #11788 #12234 #12499

- Fix pitch issue with dynamic tracks and sync while cloning tracks #12515

- Fix issue with half/double BPM calculation when using sync #3899 #3706

- Sync Lock: Don't seek phase when disabling sync #4169

- Sync Lock: Fix issues with single-playing syncables #4155 #4389

- Re-sync to leader after scratching #4005

- Fix audio artifacts when fading from or to zero #4363

- EngineBuffer: Fix assert when new track is loaded during playback with sync #4682

Audio Codecs

- Add support for m4v files #4088

- Fix recovering from FAAD2 decoding issues #2850

- MP3: Log recoverable errors as info instead of warning #4365

- MP3: Garbage detection fix #12464

- MP3: Improve decoding precision on Windows #11911 #11888

- AAC encoder: Fix a memory leak #4386 #4408

- Improve robustness of file type detection by considering the actual MIME type of the content. #7970 #4356 #4357

- Fix file type detection when file has wrong file extension by determining the MIME type from content #4602 #4600 #4615 #7970 #10624 #4683 #10669

- Fix type detection of AIFF files #4364

- Fix synchronization time stamps of ModPlug files #4826 #10758

- ID3v2 parsing: Improve log warnings #4610

- ID3v2 parsing: Fix inconsistent import of comment field #11249

- Enable Modpug and Wavpack Support on macOS #11182 #11119

- Fix missing file name in file metadata error message #11965 #11964

- Verify the "first sound" of as an analysis sanity check #4773 #11887 #11946 #11940

- Fix zeros in the first m4a chunk on Linux #11879

- Fix overlapping buffers when decoding m4a files using ffmpeg #11760 #11545

- Fix possible crash with opus files with embedded cover arts and require TagLib 1.11 or newer #4251 #4252 #10500

Audio Engine

- Add support for Saved loops #2194 #3267 #3202 #4265 #7574 #11006 #11003 #12637 #12632 #12623 #12618

- Fix an issue when pressing multiple cue buttons at the same time #3382

- Fix synchronization of main cue point/position #4137 #10478 #4153

- Adjust ReplayGain: Allow user to update the replaygain value based on a deck pregain value #4031

- Add halve/double controls for beatjump size #4269

- Implement Un-eject by pressing eject again #4668 #11246

- Implement Un-replace by double-clicking eject #11246

- Allow to cancel active loops via beatloop_activate #4328 #9950

- Slip Mode: Preserve active (regular) loop when leaving Slip Mode #11435 #6993

- Fix possible segfault when ejecting track #4362 #10497

- Fix possible crash when ejecting track from a controller #11884 #11819

- Fix an assertion when loop is before track start #4383 #10556

- Fix and improve snapping to beats in various situations #4366 #10541

- Don't wipe inapplicable sound config immediately #4544

- Rubberband: Support Version 3 "finer" (near-hi-fi quality) setting, on Windows and MacOs and when available on Linux #4853 #4855 #11047

- Rubberband: Add missing padding, preventing it from eating the initial transient #11120

- Rubberband: Improve mono-compatibility for R3 "finer" #11418

- Fix a possible crash when ejecting a track #11334 #11257

- Add a range limits for beatjump_size of 512 #11248 #11203

- Auto DJ: Fix sharp cut transition after cueing a track without a defined intro #11629 #11621

- Auto DJ: Don't use removed Intro end and outro start makers, use transition time instead #11830

- Auto DJ: Fix GUI freeze when updating duration for many selected tracks #12530 #12520 #12537

- KeyControl: fix keylock/unlock bugs, reset pitch_adjust 4710

- Looping: fix asserts for loop move #11735

- Looping: reset loop_end_pos on eject #12224 #12223

- Fix Loop_out not seeking back #12739 #12742

- ReadAheadManager: fix loop wraparound reader condition #11717

- Slip mode: consider loop for background position only if it was enabled before slip #11848 #11844

- Make decks' xfader assignment persistent #12074 #10122

- Fix gain issue with cloned tracks #12435 #10550

Controller Mappings

- new: Hercules DJControl MIX controller mapping #11279

- new: Pioneer DDJ-FLX4 controller mapping based on DDJ-400 #11245

- new: Traktor Kontrol S4 Mk3 controller mapping #11284

- new: Traktor Kontrol Z1 HID controller mapping #12366 #12426

- new: Yaeltex MiniMixxx controller mapping #4350

- Behringer DDM4000 mixer: Update controller mapping #4262 #4799

- Hercules DJ Console RMX: Replace not defined CO name pitch_reset by pitch_set_default #12441

- Korg nanoKONTROL2: Don't try to configure more than 4 main decks #12322 #12317

- Korg nanoKONTROL2: Removed along with Mixco scripts #2682

- MAudio Xponent: Removed along with Mixco scripts #2682

- MIDI4lights: Give beginTimer callbacks the anonymous function expression form #12048

- Novation Twitch: Removed along with Mixco scripts #2682

- Novation Launchpad: Update controller scripts #2600 #11914

- Numark DJ2GO2 Touch: Fix sampler, hotcue, beatloop buttons #4287 #11595

- Numark MixTrack Pro 3: Fix beginTimer callback syntax #12401 #12369

- Roland DJ-505: Make blinking lights blink in sync and other improvements #4159 #4517

- Traktor Kontrol S2 MK1: Add calibration and refactor #11237

- Traktor Kontrol S2 MK2 fix loaded chain preset CO #11823 #10667

- Traktor Kontrol S2 MK3: Use FX select buttons to set quick effect presets #11702

- Traktor Kontrol S3: script improvements, vanilla-like FX behavior, control initialization, better scratching, and more #11199 #10645 #12409 #12510

- Various mappings: Fix `waveform_zoom` ranges #12393

- Various mappings: Ensure required samplers are created #12769

Controller Backend

- Never raise a fatal error if a controller mapping tries access a non-existent control object #2947

- Add support to access HID FeatureReports #11326 #10828 #11664

- Add function to request HID InputReports, to determine controller state at startup #3317

- Exclude HID device: ELAN touch screen #11324 #11323

- Show otherwise hidden HID devices in developer mode #11317

- Use hidapi's hidraw backend instead of libusb on Linux #4054

- Fix broken HID controller mappings Traktor Kontrol S2 MK3 and others #11470 #11461

- HID mappings: Modernize and document common-hid-packet-parser.js #4718 #4894

- HID mappings: Small fixes for common-hid-packet-parser.js #11925

- HID mappings: Add [Main] to the list of valid groups #12102 #12406

- Consistently use "mapping" instead of "preset" to refer to controller mappings #3472

- Introduce new control object `[Library]`, `show_track_menu` to open/close the track menu #4465

- Introduce new control object `[Library]`, `sort_focused_column` #4749 #4763 #10719

- Introduce new control objects `[Master]`, `indicator_250millis` and `[Master]`, `indicator_500millis` #4157

- Introduce new control object `[Library]`, `clear_search` #4331

- Introduce new control object `[Library]`, `focused_widget` to focus library directly #4369 #4490

- Introduce new control object `LoadTrackFromDeck` and `LoadTrackFromSampler` #11244

- Don't automatically enable controller if it was disabled before #4244 #10503

- Enable Qt logging categories for controller logging #4523

- Fix segfault during Mixxx shutdown due to a stale controller connection #4476 #10553

- Components JS: Fix syncbutton #4329

- Components JS: Add script.posMod for euclidean modulo #11415

- Components JS: make JogWheelBasic correctly switch which deck it controls #11913 #11867

- Add Trace for the mapping connections, to allow JS profiling #4766

- Controller preferences: Allow creating a new mapping with 'No Mapping' selected #4905 #10540 #10539

- Add TypeScript declarations for engine and controller scripting API to improve IDE code completion during mapping development #4759

- Retire Mixco Scripts #2682

- Relax strictness of `ControllerScriptInterfaceLegacy` methods. #11474 #11473

- Do not show ControlObject aliases in developer tools window #12265

- Do not use deprecated COs in C++ code/Keyboard Mapping/Skins #11990

- Fix creation of Sampler `end_of_track` ControlObjects #12305 #12304

- Add a test SoftTakeoverTest.CatchOutOfBounds #12114 #12011

- Make WHotcueButton learnable with the MIDI Wizard #12252

- Control picker menu: add `waveform_zoom_set_default` #12247

- CO Renaming #12022 #12021 #11998 #11996 #11980 #12007

- Remove deprecated ControlObjects from Skins #12030

- Log warning if deprecated control is used #11972

- ControlObject alias improvements #11973

- Keyboard mapping: Repeat certain control actions if key is held #12474

- Keyboard mapping: Return triggers double-click, move Preview functions to P / Shift+P #12639

- Keyboard mapping: Various fixes #12730

- Update keyboard sheet #12578

- Logging: Add support for `QT_MESSAGE_PATTERN` environment variable #3204 #3518

- Avoid issue with `stars_up/_down` ControlObjects #12591

- hotcue_X_color control: Fix color not stored in cue #12733

Skins

- Add harmonic keywheel window #1695 #3622 #3624

- Allow skin scaling from preferences #3960 #11588 #11586

- Fix icon rendering on HiDPI/Retina screens #12407 #12361

- Increase pixmapCache size limit and made it dependent on devicePixelRatio (for HiDPI/Retina displays) #12416

- Make beat indicator control behaviour more natural #3608

- Fix crash if no skin is available #3918 #3939

- Fix crash when starting without a valid skin directory #4575 #10461

- Fix leaked controls #4213 #10293

- Fix switching from Shade to other skins #4421 #10558

- Use double click to reset knobs and sliders #4509 #9947

- Use info not warning for skin COs #4525

- Spinny: Allow to toggle cover art at runtime #4565 #10015

- Passthrough: improve UI / UX #4794

- Knob: Hide cursor on wheel event for .8s #11077

- Move skin control hack to c++ (spinny/cover controls, mic/ducking controls) #11183

- LateNight: Move logo to the right #4677

- LateNight: Use correct tooltip for key control toggle #4696

- LateNight: Add toggles to show loop and beatjump controls #4713

- LateNight: Remove blinking play indicator from mini samplers #4807

- LateNight: Add buffer underflow indicator #4906 #10978

- LateNight: Fix xfader icons in samplers and aux units #12477

- LateNight: use default RGB waveform colors #12712

- Add LateNight (64 Samplers) #11715

- Deere: fix skin/library layout (library missing in default view with Qt6) #11912

- Deere: use decks' waveform colors for sliders (Vol + pitch) #12129 #10240

- Shade: Remove initial setting of now accessible effect controls #4398 #10557

- Shade: Audio Latency meter fix #11601

- Tango: allow to toggle crossfader independently from mixer #12703 #12654

- Fix outdated tooltips #11387 #11384 #11860

- Add settings directory link to Help menu #11670 #11667

- Fix sidebar item styling #11975 #11957

- Fix 500ms blocking of the whole event loop, when holding mouse down on title bar on Windows #12359 #12358 #12433 #12458

- Change SKIN_WARNING to show the skin file and line first, then c++ context #12253

- Fix style of selected QComboBox items on Windows #12339 #12323

- Fix reading the Spinny cover on Windows #12103 #11131

- Fix inconsistent/wrong musical keys in the UI #12051 #12044

- Add `skins:` path alias #12463

- Remove `Text`, use `TrackProperty` or `Label` #12004

- Beat spinBox/AutoDJ spinbox: Enter & Esc also move focus to library #4617 #4845

- Add effect chain menu button to Deere, polish in Tango #12735

- Skins: reload default.qss when (re)loading a skin #12219

Waveforms and GL Widgets

- Waveform overhaul based on QOpenGlWindow and introduce full GLSL shader based waveforms, vumeters and spinnies. This fixes a couple of performance issues mainly on macOS. #10989 #10416 #11460 #11556 #11450 #10416 #11734 #12466 #12678 #12731

- Default to 60 Hz waveform refresh rate #11918

- Introduce a VSsync mode driven by a phase locked loop #12469

- Make VSync mode 0 refer to the default mode and make ST_PLL the default on macOS, ST_TIMER otherwise #12489

- Use WaveformWidgetType::AllShaderRGBWaveform as autoChooseWidgetType #11822

- Add new "RGB Stacked" waveform #3153

- Fix micro jitter from clamping position offset to vsync interval #12470

- Avoid flickering when resizing #12487

- Invert scroll wheel waveform zoom direction to mach other applications #4195

- Waveform scrolling: Use set interval setting to fix performance degradation for AMD graphics adapters #11681 #11617

- Fix waveform zooming #11650 #11626

- Fix OpenGL version detection #11673

- Fix crash when no GL context is available #11963 #11929

- Fix stopped waveform rendering in case of vinyl control #11977 #10764

- Fix visual play position related to looping #11840 #11836 #12538 #12506 #12513

- Fix for visual position while scratching outside of an activated loop #12281 #12274

- Spinny: Fix drawing of non-square cover arts #11971 #11967

- Spinny/VU-Meter: Fix drawing #12010 #11930

- VU-Meter: Don't use OpenGL by default #11722

- Improve GLSL pre-roll triangles #12100 #12015

- Make scaling of GLSL RGB and RGB L/R waveform amplitudes consistent with simple waveform #12205 #12356

- Improve rendering of waveform marks #12203 #12237

- avoid overlapping marks #12273

- gradually "compact" the markers if the waveform height is reduced #12501

- Fix clamping of the index for drawing the waveform left of zero position #12411

- Fix possible crash when closing Mixxx #12314 #11737

- Fix EGL support #11982 #11641 #11935 #11985 #11982 #11995 #11994 #12607

- Preferences: recall correct waveform type when selecting an overview type #12231 #12226

Cover Art

- Prevent wrong cover art display due to hash conflicts #2524 #4904

- Add background color for quick cover art preview #2524

- Fix coverart tooltip if cover is not cached #12087

- Add cover art fetcher to the Musicbrainz dialog #10908 #4871 #10795 #10796 #10902 #4851 #11938 #11086 #12041 #12300 #12543 #12532 #12543

- CoverArtCache refactoring + Fix scrolling lag after updating Mixxx #12009

Effects

- Effect refactoring: Effect chain saving/loading, parameter hiding/rearrangement, effect preferences overhaul #4467 #4431 #4426 #4457 #4456 #4459 #4462 #4466 #4468 #4472 #4470 #4471 #4483 #4482 #4484 #4486 #4502 #4501 #4518 #4532 #4461 #4548 #4503 #4686 #4691 #4704 #4748 #4833 #10762 #4884 #10802 #10801 #4899 #8817 #10868 #11055 #11135 #11185 #11242 #10837 #10834 #11424 #11376 #11456 #11454 #11695 #12633 #12561 #10859 #10777 #11886 #12282 #12277 #11705 #4469 #11902 #10605 #4702 #10579 #4501 #4502 #4503 #4590 #4593 #11062

- Add Noise effect #2921

- Add Pitch Shift effect #4775 #7389 #4810 #4901 #10858 #12481

- Add Distortion effect #10932

- Effect parameter knobs: Briefly show parameter value in parameter name widget #11032 #9022 #11034

- Effect parameter knobs: Implement ValueScaler::Integral, snap value to int #11061

- Show effect parameter units in parameter name label #11041 #11194

- Fix gain compensation for the Moog filter #11177

- Fix memory leak in AutoPan #11346

- EngineFilterDelay: clamp wrong delay values #4869

- Fix crash when changing effect unit routing #4707 #9331

- Clear effect buffer after ejecting a track #10692

- Center Super knob when loading empty (QuickEffect) chain preset #12320

- Don't reset "super" and "mix" knob on startup #11781 #11773

- Add a missing early return #11809 #111808

- Update EffectSlot meta default value according to loaded effect #12480 #12479

Target Support

- Added support for macOS ARM builds on M1/M2 Apple silicon #11398
- Set app_id to fix Mixxx window icon on Wayland #12635
- Require C++20 but keep Ubuntu Focal support #4889 #4895 #11204 #4832 #4803 #11551 #11573
- Drop Ubuntu Bionic support, require Qt 5.12 #3687 #3735 #3736 #3985
- Drop Ubuntu Groovy and Impish support because of EOL #4283 #4849 #12353
- Support Ubuntu Noble and Jammy #4780 #4857 #12353
- Add NixOS support #2820 #2828 #2836 #2827 #2827 #2828 #3113 #3089 #3545
- Windows packaging: Use Azure for signing exe, msi and all dlls with timestamp and sha256 #12465 #4824 #4825
- macOS packaging: Fix signing and migrate script to `notarytool` #12123 #12089 #12095
- macOS packaging: Enable app sandbox and fix related issues #12138 #12457 #12137 #11552 #4018 #10373
- macOS: Use rounded Mixxx Icon to follow Apples style guide #4545 #10958
- macOS packaging: Capitalize bundle and executable name (Mixxx.app) #12656
- OpenBSD: Allow building Mixxx #11083
- Improve Linux launcher #11826 #11820 #11805 #12424
- Experimental iOS support #12665 #12666 #12662 #12663 #12661 #12650
- Fail early in case Taglib 2.0 is found #12709

Track properties

- Fix a SIGSEGV after a debug assertion #4316
- Apply pending changes also when saving via hotkey #4562 #10612
- Fix crash when trying to scale 0.0 BPM #4587 #1955853
- Add track color selector #11436 #10324
- Don't clear unsaved properties when updating star rating #11565 #11540
- Fix glitch in Star rating #12582 #12576
- Focus Double-clicked property field for edit #11764 #11804 #11802
- Display the samplerate #12418

Preferences

- Always show tooltips #4198 #9716
- Add option to keep deck playing on track load #10944 #10548
- Always enable Alt shortcut keys #11145 #10413
- Sound Hardware: auto select free device channels #11859 #10163
- Various layout and UX fixes #12429 #12399 #11663 #11926 #12057
- macOS: set preferences dialog title to the selected page title #11696

- macOS: fix the preferences menu and opening the settings directory #11679
- macOS: fix slider styling in preferences dialog #11647
- Vinyl control: Improve quality indicator #3279
- Mixer: apply & save settings only in slotApply(), fix bugs, improve UX #11527
- Mixer: fix reset of EQ auto-reset checkbox #11818 #11817
- Interface: avoid unneeded skin reload, clean up #11853
- Library: Add link to settings files info in the manual #4367
- Controllers: add search bars to mapping tables #11165
- Add 13 new translation languages #4785 #9702
- Join Franch translations to "fr" and remove all untranslated English strings. #12699
- Apply changes from all pages when pressing Apply (like when pressing Okay) #12194

Known issues

- Volume / Loudness spikes on Windows with M4A/AAC files. Last known working version is Windows 10 build 17763. Affected versions are Windows 10 build 19041 and Windows 11 build 22000. #12289 #11094
- macOS: Library entries are now sorted using the language depending Unicode Collation Algorithm (UCA). #12517
- macOS: Visual glitches with the main EQ sliders #12517
- Linux: possible crash when enabling a MIDI controller #12001 Introduce with Qt 5.15.5, fixed in Qt 5.15.17 and Qt 6.6.3
- Extra Samplers are created during startup, when found in a saved Sampler Bank #12657 #12809

16.8.3 2.3.6 (2023-08-15)

- Fixed possible crash when closing Mixxx while browsing the file system #11593 #11589
- No longer stop a track with an active loop at the very end #11558 #11557
- Fixed resyncing when moving an active loop #11152 #11381
- Allow true gapless playback when repeating full tracks #11532 #9842 #11704
- Rhythmbox: Fixed bulk track imports from playlists #11661
- Console log spam reduced #11690 #11691
- Numark DJ2GO2 Touch: Add missing loop_out mapping for the right deck #11595 #11659
- Shade: Fixed VU-Meter and other minor issues #11598
- Fixed a rare crash when disabling quantize form a controller #11744 #11709
- Controller Preferences: Avoid scrollbars in I/O tabs if Info tab exceeds page height #11756
- Broadcast: Improved error message in case of timeout #11775
- Handle setting `loop_in` and `loop_out` to the same position #11771 #10600
- Fix build issues with Protobuf v23.4 and with clang 32 #11751 #11765 #11762
- Disable GL VU-Meters on Windows by default. They can be re-enabled via the command line option `--enableVuMeterGL`. #11787 #11785 #11789

- Library preferences: Uncheck Serato metadata export when file metadata export is unchecked #11782 #11226

- Denon MC6000MK2: Delete mapping for main gain #11792

- Improve output in case of some failed file system operations #11783

- Fix overlapping buffers when decoding M4A files using FFmpeg before 4.4 #11760 #11545

- Don't reject key values from file metadata with non-minor/-major scales. #11001 #10995

- Allow playing tracks with durations of more than 6 hours #11511 #11504

- Update latency compensation for Soundtouch version 2.1.1 to 2.3 #11154

16.8.4 2.3.5 (2023-05-10)

- Fix empty waveform overview after loading a track (Mixxx 2.3.4 regression) Fixed by #11333 #11359 #11344

- Fullscreen: Fix a crash that occurs on Linux after enabling fullsceen and using menu shortcuts e.g. Alt-F. #11328 #11320

- Fullscreen: Rebuild & reconnect menu only on desktops with global menu #11350

- macOS: Request Microphone and line-in access permission. #11367 #11365

- JACK API: Allow to explicit select buffers of 2048 and 4096 frames/period. They are not supported by the automatic buffer setting of the used PortAudio library. #11366 #11341

- Pioneer DDJ-400: Make Beat FX section more intuitive #10912

- Playlist export: Adopt new extension after changing the playlist type #11332 #11327

- LateNight: brighter fx parameter buttons #11397

- Fix drift in analyzis data after exporting metadata to MP3 files with ID3v1.1 tags #11168 #11159

- Fix broadcasting using Opus encoding #11349 #10666

- Tango: Remove VU peak indicators from stacked layout. This fixes a visual regression in Mixxx 2.3.4. #11430 #11362

- Hercules P32: Allow optional using pregain instead of dry/wet knob #3538

- Improve Color Picker dialog #11439

- Fix blank Waveform overview after changing Skin with a track loaded #11453

- Linux: Log a warning when the audio thread is not scheduled with real-time policy #11472 #11465

- Auto DJ: Fixes stop due to tracks with changed length #11479 #11492 #11448

  - Auto DJ: Fix Auto DJ indicator state when controlling it via shortcut (SHIFT+F12) #11494 #11495

- Fix building with Clang 15/16 #11490 #11485

- Fix EQ and waveforms analysis when compiling with GCC 13 #11501 #11483 #11502 #11480 #11488

- Numark Mixtrack Pro FX: Fix sound output via WDM-KS on Windows #11393

- Fix crash on startup caused by faulty ASIO driver like FlexASIO 1.4 or Music Maker #11426 #10081

- Windows: Show a loopback device that allows to mix in system sound #11427 #11451

- Fix sorting via column header in external library features #11491 #11499 #11498

- Fix wrong waveform background color on recent Linux distributions like Fedora 37 #11164 #11523

- Serato Metadata: Don't import empty (black) cue points #11534 #11530 #11467 #11466 #11283

- Track context menu: Immediately adopt new position when resetting cues #11482

- Windows: Fix possible crash with faulty mp3 files #11535 #11531 #11528 #11521

16.8.5 2.3.4 (2023-03-03)

- Track Properties: Show 'date added' as local time #4838 #10776

- Shade: Fix library sidebar splitter glitch #4828 #10757

- LateNight: Add a border to the crossfader when Auto DJ is active. #10913

- LateNight: Isolate searchbar so maximize button is attached to tracks view. #11132

- macOS builds: Perform ad-hoc signing of macOS bundle in Pull request and personal repositories #4774

- Waveform: Avoid visual glitch with ranges < 1 px #4804

- Build Mixxx on macOS 11, replacing deprecated macOS 10.15 #4863

- Add macOS 13.0 (Ventura) support, by using portaudio 19.7.0 #11046

- EQ preferences: Properly restore 'One EQ for all decks' setting #4886

- Cover Art: Fix picking wrong cover file, when track file name contains extra dots #4909

- MusicBrainz: Respect rate limits #10874 #10795

- MusicBrainz: Stop fetching after closing the dialog #10878 #10877

- MusicBrainz: Fixed stalled GUI after client timeout #10875 #10883

- macOs: Fix frozen skin control after Ctrl-Click #10869 #10831

- Avoid redundant messages boxes after track loading fails #10889

- Use OpenGL VU meter widgets. This aims to improve performance with macOS. #10893 #11052 #10979 #10973 #10983 #11288

- Prevent wild numbers from appearing during scratching under vinyl control. #10916

- Fixed a possible crash due to a race condition when editing cue points. #10976 #10689

- Fixed a possible crash when overing cue point via mouse in the waveforms. #10960 #10956

- History: Disallow dropping tracks. #10969 #10250

- WTrackMenu: Sort crates and playlists like in sidebar. #11023

- WCoverArtLabel: Don't open full-size cover if no cover is loaded, to avoid an issue when closing. #11022 #11021

- Removed integer truncation of the position when reading cue points from the database. #10998

- Fix cue points being assigned invalid value of -1.0 #11000 #10993

- Auto DJ: Added a warning in a message box when it is started without decks with left and a right crossfader orientation #11018

- Fixed crash with FFmpeg decoder #11044

- Fixed issue with finding moved library tracks. #11051

- Preserve and synchronize ID3v1 tags (TagLib v1.12) #11163 #11123

- Replay Gain Preferences: Fix the "adjust by" text in case of negative adjustments #11176

- macOs: Install Qt translation #11134 #11110

- macOs: Fix assuming wrong system language #11218 #11195

- Fix resetting track colors on metadata reimport (Serato metadata): #11217 #11213

- Preferences: Fix incomplete version check in 2.3 during upgrade #11229 #9709

- Allow search in external libraries #11221 #11216

- JACK buffer size fix #11121

- Don't discard file tags with tuning information like "A#m +50" #10992

- Year search: Find also full date entries #11251 #11113

- Fix visual alignment of beats and waveform in case of decoding issues #11162

- Avoid "active key-value observers" messages during skin parsing on macOS #11265

- Fullscreen on Linux: Fix issues caused by Ubuntu Unity workaround #11295 #11281 #11294

New Controller Mappings

- Traktor Kontrol S2 Mk1: Add controller mapping #3905

- Numark Party Mix: Mapping added #4720

Controller Fixes

- Traktor S3: Fix issues with sampler and hotcue buttons #4676

- Numark DJ2GO2: Fix sliders and knobs #4835 #10586

- Numark DJ2Go2: Support HotCue clear with pad #10841

- Numark DJ2Go2: Fix inverted tempo fader #10852 #10586

- Numark N4: Inverted pitch slider, to match the GUI orientation #11057

- Ableton Push: Show as one device #10905

- Denon DJ MC7000: off-by-one fix, soft-start/break effect, pitch play, 32 velocity samplers #4902 #4729

- Potmeters: Add support for arbitrary maximums in 7-/14-bit handlers from controller scripts #4495

- Controller Preferences: Fix some usability issues #10821

- Controller mapping table: show readable/translated strings for script bindings #11139

- Control picker menu: Added loop_in/out_goto to list #11133

Packaging

- Fix compatibility with FFmpeg 5.1 and require FFmpeg v4.1.9 #10862 #10866

- Fix GCC 12.2.0 compatibility #10863

- Improve CMake 3.24 compatibility #10864

- Use MIXXX_VCPKG_ROOT cmake and environment variable to find the vcpkg environment #10904

- Fix `-Wswitch` when building with FLAC >= 1.4.0 #10921

16.8.6 2.3.3 (2022-06-21)

- Pioneer DDJ-SB3: Fix controller breaking when releasing the shift button #4659

- Traktor S3: Push two deck switches to explicitly clone decks #4665 #4671 #10660

- Behringer DDM4000: Improve stability and add soft-takeover for encoder knobs #4318 #4799

- Denon MC7000: Fix 'inverted shift' bug in the controller mapping #4755

- Fix spinback and break effect in the controller engine #4708

- Fix scratch on first wheel touch #4761 #9489

- Preferences: Prevent controller settings being treated as changed even though they were not #4721 #10365

- Fix rare crash when closing the progress dialog #4695

- Prevent preferences dialog from going out of screen #4613

- Fix undesired jump-cuts in Auto DJ #4693 #10592 #10093

- Fix bug that caused Auto DJ to stop playback after some time #4698 #10093 #10670

- Do not reset crossfader when Auto DJ is deactivated #4714 #10683

- Change the minimum Auto DJ transition time to -99 #4768 #10739

- Samplers, crates, playlists: fix storing import/export paths #4699 #10679

- Library: keep hidden tracks in history #4725

- Broadcasting: allow multiple connections to same mount if only one is enabled #4750 #10727

- Fix a rare mouse vanish bug when controlling knobs #4744 #6922 #10715

- Restore keylock from configuration and fix pitch ratio rounding issue #4756 #10518

- Improve CSV export of playlists and crates and fix empty rating column #4762

- Fix passthrough-related crash in waveform code #4789 #4791 #10650 #10743

- Passthrough: stop rendering waveforms and disable Cue/Play indicators 4793

16.8.7 2.3.2 (2022-01-31)

- Playlist: Enable sorting by color #4352 #10546

- Fix crash when using Doubling/Halving/etc. BPM from track's Properties window on tracks without BPM #4587 #10625

- Fix writing metadata on Windows for files that have never been played #4586 #10620

- Preserve file creation time when writing metadata on Windows #4586 #10619

- Fix handling of file extension when importing and exporting sampler settings #4539

- Fix crash when using an empty directory as resource path using the `--resource-path` command line option #4575 #10461

- Pioneer DDJ-SB3: Add controller mapping #3821

- Don't wipe sound config during startup if configured devices are unavailable #4544

- Append selected file extension when exporting to playlist files #4531 #10066

- Fix crash when using midi.sendShortMsg and platform vnc #4635 #10632

- Traktor S3: Fix timedelta calculation bugs #4646 #10645

Packaging

- Downloads of external dependencies are placed in build/downloads

- The sources for libkeyfinder are now expected in build/downloads/libkeyfinder-2.2.6.zip instead of build/download/libkeyfinder/v2.2.6.zip

- CMake: Adjust the download directory and name of external dependencies #4511

- Fix/Improve Appstream metainfo #4344 #4346 #4349

16.8.8 2.3.1 (2021-09-29)

- Added mapping for the Numark DJ2GO2 Touch controller #4108 #4287

- Added mapping for the Numark Mixtrack Pro FX controller #4160

- Updated mapping for Behringer DDM4000 mixer #4262

- Updated mapping for Denon MC7000 controller #4021

- Hercules Inpulse 300: Add better FX controls and other minor improvements #4246

- Denon MC7000: Improve slip mode and jog wheel handling #4021 #4324

- Disabled detection of keyboards and mice as HID controllers #4243

- Disabled detection of all HID controllers with Apple's vendor ID. Apple doesn't build actual controllers. #4260 #4273

- Add support for HiDPI scale factors of 125% and 175% (only with Qt 5.14+) #10485 #4161

- Fix Echo effect adding left channel samples to right channel #4141

- Fix bad phase seek when starting from preroll #10423 #4093

- Fix bad phase seek when a channel's audible status changes #4156

- Tango skin: Show crossfader assign buttons by default #4046

- Fix keyfinder library in arm64 builds #4047

- Fix wrong track being recorded in History #10454 #4041 #4059 #4107 #4296

- Fix support for relative paths in the skin system which caused missing images in third-party skins #4151

- Fix relocation of directories with special/reserved characters in path name #4146

- Update keyboard shortcuts sheet #4042

- Library: resize the Played checkbox and BPM lock with the library font #4050

- Don't allow Input focus on waveforms #4134

- Fix performance issue on AArch64 by enabling flush-to-zero for floating-point arithmetic #4144

- Fix custom key notation not restored correctly after restart #4136

- Traktor S3: Disable scratch when switching decks to prevent locked scratch issue #4073

- FFmpeg: Ignore inaudible samples before start of stream #4245

- Controller Preferences: Don't automatically enable checkbox if controller is disabled #4244 #10503

- Tooltips: Always show tooltips in preferences #4198 #9716

- Tooltips: Use item label for tooltips in library side bar and show ID when debugging. #4247

- Library sidebar: Also activate items on PageUp/Down events. #4237

- Fix handling of preview button cell events in developer mode. #4264 #10418

- Auto DJ: Fix bug which could make an empty track stop Auto DJ. #4267 #10504

- Fix Auto DJ skipping tracks randomly #4319 #10505

- Fix high CPU load due to extremely high internal sync clock values #4312 #10520

- Fix preference option for re-analyzing beatgrids imported from other software #4288

- Fix wrong base tag used for deployment and displayed in About dialog #4070

Packaging

- It is no longer necessary to manually copy the udev rule file in packaging scripts. Now pkg-config is used to determine the udevdir used to install the rules file in the CMake install step when CMAKE_INSTALL_PREFIX is / or /usr. #4126

- Various build issues on FreeBSD are fixed #4122 #4123 #4124

- .desktop file has be renamed to org.mixxx.Mixxx.desktop according to Freedesktop standards #4206

- Uses system provided hidapi library if version >= 0.10.1 #4215

- Please update PortAudio to 19.7 if you have not done so already. This is required for Mixxx to work with PipeWire via the JACK API for many devices.

- Install multiple sizes of rasterized icons #4204 #4315 #4254

- CMake: Fixed detection of SoundTouch pkgconfig file and version #4209

- Fix AppStream metainfo #4205 #4317

16.8.9 2.3.0 (2021-06-28)

Hotcues

- Add hotcue colors and custom labels by right clicking hotcue buttons or right clicking hotcues on overview waveforms #2016 #2520 #2238 #2560 #2557 #2362

- Mouse hover cues on overview waveform to show time remaining until the cue #2238

Hotcue & Track Colors

- Add configurable color per track #2470 #2539 #2545 #2630 #6852

- Add customizable color palettes for hotcue and track colors #2530 #2589 #3749 #2902

- Add hotcue color find-and-replace tool #2547

Importing From Other DJ Software

- Import cue points, track colors, and playlists from Serato file tags & database #2480 #2526 #2499 #2495 #2673 #3885

  - Note: Mixxx does not yet support multiple loops per track. We are working on this for Mixxx 2.4. In Mixxx 2.3, if you import a track with multiple loops from Serato, Mixxx will use the first loop cue as the single loop Mixxx currently supports. The imported loops are still stored in Mixxx's database and are treated as hotcues in Mixxx 2.3. If you do not delete these hotcues, they will be usable as loops in Mixxx 2.4. Serato keeps loops and hotcues in separate lists, but Mixxx does not, so loops from Serato are imported starting as hotcue 9.

- Import cue points, track colors, and playlists from Rekordbox USB drives #2119 #2555 #2543 #2779

  - Note: The first Rekordbox memory cue is imported for the main cue button in Mixxx and the remaining Rekordbox memory cues are imported as Mixxx hotcues, starting with the next hotcue number after the last hotcue from Rekordbox.

  - Note: Mixxx does not yet support multiple loops per track. Imported loops from Rekordbox are treated like imported loops from Serato, so refer to the note above for details.

Intro & Outro Cues

- Add intro & outro range cues with automatic silence detection #1242

- Show duration of intro & outro ranges on overview waveform #2089

- Use intro & outro cues in AutoDJ transitions #2103

Deck cloning

- Add deck cloning (also known as "instant doubles" in other DJ software) by dragging and dropping between decks #1892 and samplers #3200

- Clone decks by double pressing the load button on a controller (with option to disable this) #2024 #2042

Skins & GUI

- Aesthetically revamped LateNight skin #2298 #2342

- Right click overview waveform to show time remaining until that point #2238

- Show track info dialog when double clicking track labels in decks #2990

- Show track context menu when right clicking text in decks #2612 #2675 #2684 #2696

- Add laptop battery widget to skins #2283 #2277 #2250 #2228 #2221 #2163 #2160 #2147 #2281 #2319 #2287

- Show when passthrough mode is active on overview waveforms #2575 #2616

- Changed format of currently playing track in window title from "artist, title" to "artist - title" #2807

- Workaround Linux skin change crash #3144 #10030

- Fix touch control #10108

- Fix broken knob interaction on touchscreens #3512

- AutoDJ: Make "enable" shortcut work after startup #3242

- Add rate range indicator #3693

- Allow menubar to be styled #3372 #3788

- Add Donate button to About dialog #3838 #3846

- Add Scrollable Skin Widget #3890

- Fix minor visual issues in Skins #3958 #3954 #3941 #3938 #3936 #3886 #3927 #3844 #3933 #3835 #3902 #3931

Music Feature Analysis

- Multithreaded analysis for much faster batch analysis on multicore CPUs #1624 #2142 #8686

- Fix bugs affecting key detection accuracy #2137 #2152 #2112 #2136

  - Note: Users who have not manually corrected keys are advised to clear all keys in their library by pressing Ctrl + A in the library, right clicking, going to Reset -> Key, then reanalyzing their library. This will freeze the GUI while Mixxx clears the keys; this is a known problem that we will not be able to fix for 2.3. Wait until it is finished and you will be able to reanalyze tracks for better key detection results.

- Remove VAMP plugin support and use Queen Mary DSP library directly. vamp-plugin-sdk and vamp-hostsdk are no longer required dependencies. #926

- Improvements BPM detection on non-const beatgrids #3626

- Fix const beatgrid placement #3965 #3973

Music Library

- Add support for searching for empty fields (for example `crate:""`) #9411

- Improve synchronization of track metadata and file tags #2406

- Library Scanner: Improve hashing of directory contents #2497

- Rework of Cover Image Hashing #8618 #2507 #2508

- MusicBrainz: Handle 301 status response #2510

- MusicBrainz: Add extended metadata support #8549 #2522

- TagLib: Fix detection of empty or missing file tags #9891 #2535

- Fix caching of duplicate tracks that reference the same file #3027

- Use 6 instead of only 4 compatible musical keys (major/minor) #3205

- Fix possible crash when trying to refocus the tracks table while another Mixxx window has focus #3201

- Don't create new tags in file when exporting metadata to it #3898

- Fix playlist files beginning with non-english characters not being loaded #3916

- Enable sorting in "Hidden Tracks" and "Missing Tracks" views #3828 #9658 #10397

- Fix track table being empty after start #3935 #10426 #10402

Audio Codecs

- Add FFmpeg audio decoder, bringing support for ALAC files #1356

- Include LAME MP3 encoder with Mixxx now that the MP3 patent has expired #7341 buildserver:#37 buildserver:9e8bcee

- Add Opus streaming and recording support. #7530

- Remove support for SoundSource plugins because the code was not well-maintained and could lead to crashes #9435

- Add HE-AAC encoding capabilities for recording and broadcasting #3615

Audio Engine

- Fix loss of precision when dealing with floating-point sample positions while setting loop out position and seeking using vinyl control #3126 #3127

- Prevent moving a loop beyond track end #3117 #9478

- Fix possible memory corruption using JACK on Linux #3160

- Fix changing of vinyl lead-in time #10319 #3781

- Fix tempo change of non-const beatgrid track on audible deck when cueing another track #3772

- Fix crash when changing effect unit routing #3882 #9331

- Make microphone ducking use strength knob the same way in automatic & manual mode #2750

Controllers

- Improve workflow for configuring controller mappings and editing mappings #2569 #3278 #3667

- Improve error reporting from controller scripts #2588

- Make hotcue and track colors mappable on controllers #2030 #2541 #2665 #2520

- Add way to change library table sorting from controllers #2118

- Add support for velocity sensitive sampler buttons in Components JS library #2032

- Add logging when script ControlObject callback is disconnected successfully #2054

- Add controller mapping for Roland DJ-505 #2111

- Add controller mapping for Numark iDJ Live II #2818

- Add controller mapping for Hercules DJControl Inpulse 200 #2542

- Add controller mapping for Hercules DJControl Jogvision #2370

- Add controller mapping for Pioneer DDJ-200 #3185 #3193 #3742 #3793 #3949

- Add controller mapping for Pioneer DDJ-400 #3479

- Add controller mapping for ION Discover DJ Pro #2893

- Add controller mapping for Native Instrument Traktor Kontrol S3 #3031

- Add controller mapping for Behringer BCR2000 #3342 #3943

- Add controller mapping for Behringer DDM4000 #3542

- Add controller mapping for Native Instruments Traktor Kontrol S4MK3 #11284

- Update controller mapping for Allen & Heath Xone K2 to add intro/outro cues #2236

- Update controller mapping for Hercules P32 for more accurate headmix control #3537

- Update controller mapping for Native Instruments Traktor Kontrol S4MK2 to add auto-slip mode and pitch fader range #3331

- Fix Pioneer DDJ-SB2 controller mapping auto tempo going to infinity bug #2559 #9838

- Fix Numark Mixtrack Pro 3 controller mapping inverted FX on/off control #3758

- Gracefully handle MIDI overflow #825

Other

- Add CMake build system with `ccache` and `sccache` support for faster compilation times and remove SCons #2280 #3618

- Make Mixxx compile even though `QT_NO_OPENGL` or `QT_OPENGL_ES_2` is defined (fixes build on Raspberry Pi) #9887 #2504

- Fix ARM build issues #3602

- Fix missing manual in DEB package #10070 #2985

- Add macOS codesigning and notarization to fix startup warnings #3281

- Don't trash user configuration if an error occurs when writing #3192

- Enable CUE sheet recording by default #3374

- Fix crash when double clicking GLSL waveforms with right mouse button #3904

- Derive Mixxx version from `git describe` #3824 #3841 #3848

- Improve tapping the BPM of a deck #3790 #10010

- And countless other small fixes and improvements (too many to list them all!)

16.8.10 2.2.4 (2020-06-27)

- Store default recording format after "Restore Defaults" #9853 #2414

- Prevent infinite loop when decoding corrupt MP3 files #2417

- Add workaround for broken libshout versions #2040 #2438

- Speed up purging of tracks #9762 #2393

- Don't stop playback if vinyl passthrough input is configured and PASS button is pressed #2474

- Fix debug assertion for invalid crate names #9871 #2477

- Fix crashes when executing actions on tracks that already disappeared from the DB #2527

- AutoDJ: Skip next track when both deck are playing #7712 #2531

- Tweak scratch parameters for Mixtrack Platinum #2028

- Fix auto tempo going to infinity on Pioneer DDJ-SB2 #2559

- Fix bpm.tapButton logic and reject missed & double taps #2594

- Add controller mapping for Native Instruments Traktor Kontrol S2 MK3 #2348

- Add controller mapping for Soundless joyMIDI #2425

- Add controller mapping for Hercules DJControl Inpulse 300 #2465

- Add controller mapping for Denon MC7000 #2546

- Add controller mapping for Stanton DJC.4 #2607

- Fix broadcasting via broadcast/recording input #9959 #2743

- Only apply ducking gain in manual ducking mode when talkover is enabed #7668 #8995 #8795 #2759

- Ignore MIDI Clock Messages (0xF8) because they are not usable in Mixxx and inhibited the screensaver #2786

16.8.11 2.2.3 (2019-11-24)

- Don't make users reconfigure sound hardware when it has not changed #2253

- Fix MusicBrainz metadata lookup #9780 #2328

- Fix high DPI scaling of cover art #2247

- Fix high DPI scaling of cue point labels on scrolling waveforms #2331

- Fix high DPI scaling of sliders in Tango skin #2318

- Fix sound dropping out during recording #9732 #2265 #2305 #2308 #2309

- Fix rare crash on application shutdown #2293

- Workaround various rare bugs caused by database inconsistencies #9773 #2321

- Improve handling of corrupt FLAC files #2315

- Don't immediately jump to loop start when loop_out is pressed in quantized mode #9694 #2269

- Preserve order of tracks when dragging and dropping from AutoDJ to playlist #9661 #2237

- Explicitly use X11 Qt platform plugin instead of Wayland in .desktop launcher #9787 #2340

- Pioneer DDJ-SX: fix delayed sending of MIDI messages with low audio buffer sizes #2326

- Enable modplug support on Linux by default #9719 #2244 #2272

- Fix keyboard shortcut for View > Skin Preferences #9796 #2358 #2372

- Reloop Terminal Mix: Fix mapping of sampler buttons 5-8 #9772 #2330

16.8.12 2.2.2 (2019-08-10)

- Fix battery widget with upower <= 0.99.7. #2221

- Fix BPM adjust in BpmControl. #9690

- Disable track metadata export for .ogg files and TagLib 1.11.1. #9680

- Fix interaction of hot cue buttons and looping. #9350

- Fix detection of moved tracks. #2197

- Fix playlist import. #2200 #8852

- Fix updating playlist labels. #9697

- Fix potential segfault on exit. #9656

- Fix parsing of invalid BPM values in MP3 files. #9671

- Fix crash when removing rows from empty model. #2128
- Fix high DPI scaling of RGB overview waveforms. #2090
- Fix for OpenGL SL detection on macOS. #9653
- Fix OpenGL ES detection. #9636
- Fix FX1/2 buttons missing Mic unit in Deere (64 samplers). #9703
- Tango64: Re-enable 64 samplers. #2223
- Numark DJ2Go re-enable note-off for deck A cue button. #2087
- Replace Flanger with QuickEffect in keyboard mapping. #2233

16.8.13 2.2.1 (2019-04-22)

- Include all fixes from Mixxx 2.1.7 and 2.1.8
- Fix high CPU usage on MAC due to preview column #9574
- Fix HID controller output on Windows with common-hid-packet-parser.js
- Fix rendering slow down by not using QStylePainter in WSpinny #8419
- Fix broken Mic mute button #9387
- added quick effect enable button to the control picker menu
- Fix Cover Window close issue with empty cover arts
- Fix Numark Mixtrack 3 mapping. #2057

16.8.14 2.2.0 (2018-12-17)

General

- Update from Qt4 to Qt5.
- Use Qt5's automatic high DPI scaling (and remove the old scaling option from the preferences).
- Vectorize remaining raster graphics for better HiDPI support.

Effects

- Add mix mode switch (Dry/Wet vs Dry+Wet) for effect units.
- Add support for LV2 effects plugins (currently no way to show plugin GUIs).
- Add preference option for selecting which effects are shown in the list of available effects in the main window (all LV2 effects are hidden by default and must be explicitly enabled by users).

Skins

- Add 8 sampler and small sampler options to LateNight.

- Add key / BPM expansion indicators to Deere decks.

- Add skin settings menu to LateNight.

Controllers

- Add controller mapping for Numark Mixtrack Platinum.

- Update controller mapping for Numark N4.

- Add spinback and break for Vestax VCI-400 mapping.

Miscellaneous

- Add preference option to adjust the play position marker of scrolling waveforms.

- Add preference option to adjust opacity of beatgrid markers on scrolling waveforms.

- Support IRC/AIM/ICQ broadcast metadata.

16.8.15 2.1.8 (2019-04-07)

- Fix a rare chance for a corrupt track file while writing metadata in out of disk situations. lp:1815305

- Fix export of BPM track file metadata. #9593

- Fix sending of broadcast metadata with TLS enabled libshout 2.4.1. #9599

- Fix resdicovering purged tracks in all cases. #9616

- Fix dropping track from OSX Finder. #9620

16.8.16 2.1.7 (2019-01-15)

- Fix syncing to doublespeed #9549

- Fix issues when changing beats of a synced track #9550

- Fix direction of pitch bend buttons when inverting rate slider #9284

- Use first loaded deck if no playing deck is found #9397

- Encode file names correctly on macOS lp:1776949

16.8.17 2.1.6 (2018-12-23)

- Fix crash when loading a Qt5 Soundsource / Vamp Plug-In. #9324
- Validate effect parameter range. lp:1795234
- Fix crash using the bpm_tap button without a track loaded. #9512
- Fix possible crash after ejecting a track. #9513
- Fix wrong bitrate reported for faulty mp3 files. #9389
- Fix Echo effect syncing #9442
- Fix iTunes context menu #9484
- Fix loading the wrong track after delete search and scroll. #9519
- Improve search bar timing. #8665
- Fix quoted search sentence. #9396
- Fix loading a track formerly not existing. #9492
- Fix importing m3u files with blank lines. #9535
- Fix position in sampler overview waveforms. #9096
- Don't reset rate slider, syncing a track without a beatgrid. #9391
- Clean up iTunes track context menu. #9488
- Collapsed sampler are not analyzed on startup. #9502
- search for decoration characters like "°". #9517
- Fix cue button blinking after pressing eject on an empty deck. #9543

16.8.18 2.1.5 (2018-10-28)

- Code signing for Windows builds. #8309
- Fix crash on exit when preferences is open. #9438
- Fix crash when analyzing corrupt MP3s. #9443
- Fix crash when importing metadata from MusicBrainz. #9456
- Library search fixes when single quotes are used. #9395 #9419
- Fix scrolling waveform on Windows with WDM-KS sound API. lp:1729345
- Fix right clicking on beatgrid alignment button in Tango and LateNight skins. #9471
- Improve speed of importing iTunes library. #9400
- Add 2 deck mapping for DJTechTools MIDI Fighter Twister.

16.8.19 2.1.4 (2018-08-29)

Fix track selection not getting shown in the track table on Windows. There are no changes to the source code, but the Jenkins build configuration was changed to delete the Jenkins workspace before each build. lp:1751482

16.8.20 2.1.3 (2018-08-20)

Fix a severe performance regression on Windows: Mixxx 2.1.2 running much slower than 2.1.1

16.8.21 2.1.2 (2018-08-10)

Yet another bugfix release of Mixxx 2.1. Here is a quick summary of what is new in Mixxx 2.1.2:

- Allow maximum deck speed of 4x normal.
- Don't always quantize hotcues, a 2.1.1 regression. #9345
- Fix artifacts using more than 32 samplers. #9363
- store No EQ and Filter persistently. #9376
- Pad unreadable samples with silence on cache miss. #9346
- Fixing painting of preview column for Qt5 builds. #9337
- LateNight: Fix play button right click. #9384
- LateNight: Added missing sort up/down buttons.
- Fix sampler play button tooltips. #9358
- Shade: remove superfluid margins and padding in sampler.xml. #9310
- Deere: Fix background-color code.
- ITunes: Don't stop import in case of duplicated Playlists. #9394

16.8.22 2.1.1 (2018-06-13)

After two months it is time to do a bugfix release of Mixxx 2.1. Here is a quick summary of what is new in Mixxx 2.1.1:

- Require Soundtouch 2.0 to avoid segfault. #8534
- Improved skins including library view fix. #9317 #9297 #9239
- Fix crash when importing ID3v2 APIC frames. #9325
- Synchronize execution of Vamp analyzers. #9085
- DlgTrackInfo: Mismatching signal/slot connection.
- Detect M4A decoding errors on Windows. #9266
- Fix spinback inertia effect.
- Fix decoding fixes and upgrade DB schema. #9255 #9275
- Fix integration of external track libraries. #9264
- Fix memory leak when loading cover art. #9267
- Fix clearing of ReplayGain gain/ratio in file tags. #9256

- Fix crash when removing a quick link. #8270
- Fidlib: Thread-safe and reentrant generation of filters. #9247
- Fix unresponsive scrolling through crates & playlists using encoder. #8941
- Swap default values for temp/perm rate changes. #9243

16.8.23 2.1.0 (2018-04-15)

After two years of hard work, we are pleased to announce Mixxx 2.1. We have overhauled the effects system, redesigned the skins, added and improved lots of controller mappings, rewrote the audio file decoders twice, and of course fixed a bunch of bugs. Download it!

Here is a quick summary of what is new in Mixxx 2.1.0:

- Graphical interface scales for high resolution screens
- Overhauled Deere and LateNight skins
- New Tango skin
- Effects are synchronized to the tempo
- Effects are processed post-fader and post-crossfader and can be previewed in headphones
- One metaknob per effect with customizable parameter control for intuitive use of effect chains
- Nine new effects: Autopan, Biquad Equalizer, Biquad Full Kill Equalizer, Loudness Contour, Metronome, Parametric Equalizer, Phaser, Stereo Balance, Tremolo
- Loaded effects and their parameters are saved and restored when Mixxx restarts
- More transparent sounding equalizers (Biquad Equalizer and Biquad Full Kill Equalizer)
- Improved scratching sounds with jog wheels, vinyl control, and dragging waveforms with the mouse
- Simplified looping and beatjump controls
- Configurable rows of 8 samplers with up to 8 rows available for a total of 64 samplers
- Files loaded to samplers are reloaded when Mixxx restarts
- Improved volume normalization algorithm (EBU-R 128)
- Filter library table by crates
- Sort musical keys in library table by circle of fifths
- Write metadata tags back to audio files
- New JavaScript library for controller mapping
- Configure multiple Internet broadcasting stations and use multiple stations at the same time
- Broadcast and record microphones with direct monitoring and latency compensation
- Broadcast and record from an external mixer
- Booth output with independent gain knob for using sound cards with 6 output channels without an external mixer
- Prevent screensaver from starting while Mixxx is running
- CUP (Cue And Play) cue button mode
- Time remaining and time elapsed now take into account the tempo fader
- Clicking cover art now shows it full size in a separate window

- and of course, lots and lots of bug fixes.

Here are controllers with mappings that have been added or updated since the 2.0 release. Mappings marked with an asterisk (*) have been updated for the new effects interface:

- American Audio VMS2

- American Audio VMS4

- Allen & Heath Xone K2/K1*

- Behringer CMD Micro

- Behringer CMD MM1*

- Behringer CMD Studio 4a

- Denon MC4000*

- Denon MC6000 Mk2*

- FaderFox DJ2

- Hercules DJ Console 4-Mx*

- Hercules DJ Control MP3 LE / Glow

- Hercules DJ Control Compact

- Hercules P32*

- Ion Discover DJ

- Korg Nanokontrol 2

- Korg KAOSS DJ

- M-Audio Xponent

- Native Instruments Traktor Kontrol S4 Mk2*

- Novation Launchpad Mk1 & Mk2

- Novation Twitch

- Numark Mixtrack Pro 3 & Numark Mixtrack 3*

- Pioneer DDJ-SB2*

- Pioneer DDJ-SX*

- Reloop Beatmix 2

- Reloop Beatmix 4

- Reloop Digital Jockey 3 ME

- Reloop Terminal Mix 2

- Reloop Terminal Mix 4

- Vestax VCI-100 Mk2

- Vestax Typhoon

For users upgrading from older versions of Mixxx, we have a few important announcements. First, if you are using Windows, you will have to uninstall any old versions of Mixxx before you can install 2.1. How to uninstall Mixxx varies on different versions of Windows:

- Windows Vista, 7, and 8: Start > Control Panel > Programs > Uninstall a Program

---

- Windows 10: Start > Control Panel > Programs > Programs And Features > look for Mixxx > Uninstall

If you are upgrading from an older version of Mixxx and have MP3 files in your library, we have another important announcement. The good news is that we fixed a bug where the waveforms and audio playback of MP3 files were misaligned. The bad news is that we have no way of knowing which MP3 files were affected or how much the offset was. That means that waveforms, beatgrids, cues, and loops from older versions of Mixxx may be offset by an unknown amount for any MP3 file. Only MP3 files were affected by this bug; other audio file types are unaffected. You can either correct your beatgrids and cue points manually for each track, or you can clear this information for all MP3s and start fresh. Regardless, we recommend clearing the waveforms for all MP3 files. To clear these, type "location:mp3" into the library search bar, press Control + A to select all tracks, right click, and select the information you want to clear from the menu.

In the works for Mixxx 2.2, we have a big redesign of the library GUI. Along with that will come saving & restoring search queries plus nested crates. We are also planning on adding support for saving and loading custom effect chain presets with the ability to import and export them to share online.

Want to help make Mixxx even more awesome? The biggest thing we need is more people. You do not need to be a programmer to help out. Giving feedback on the design of new features as they are being made is very valuable. Refer to the Testing page on the wiki for more information on how to get involved with that. Reporting bugs and telling us your ideas on the Launchpad bug tracker is a big help too! We cannot fix problems we do not know about, so please let us know if you find any issues with Mixxx. If you would like to help translate Mixxx into another language, refer to the Internationalization wiki page. Of course, more programmers could always help. Read the Developer Documentation on the wiki for tips on getting started contributing code to Mixxx.

We hope you have as much fun with Mixxx as we do!

For a full list of new features and bugfixes, check out the 2.1.0 milestone on Launchpad.

16.8.24 2.0.0 (2015-12-31)

- 4 Decks with Master Sync
- New Effects Framework with 4 Effect Units and 5 Built-in Effects:
    - Flanger, Bit Crusher, Reverb, Echo, Filter
    - More to come!
- Configurable, Resizable User Interface with 3 Brand New Skins
- Cover Art Display
- Music Key Detection and Shifting
- Vinyl Audio Pass-Through
- 4 Microphone inputs and 4 Auxiliary inputs
- MIDI Mapping GUI and Improved Learning Wizard
- MusicBrainz metadata fetching
- RGB Musical Waveforms
- Hundreds of Bug Fixes and Improvements
- New Pitch-Independent Algorithm for Better-Sounding Key-lock

For a full list of new features and bugfixes, check out the 2.0.0 milestone on Launchpad.

For an overview of previous versions, take a look at the timeline.

HARDWARE MANUALS

17.1 Controllers

Mixxx supports the following *controllers* out of the box. Additional third-party controller mappings that were contributed by the community (but are not yet included in Mixxx) can be found at Mixxx' Controller Mapping Forum.

See also:

Using MIDI/HID Controllers describes how to configure Mixxx to use controllers.

17.1.1 Akai LPD8

- Manufacturer's product page
- Forum thread

New in version 1.10.1.

Note: Unfortunately a detailed description of this controller mapping is still missing. If you own this controller, please consider contributing one.

17.1.2 Akai MPD24

- Manufacturer's product page
- Forum thread

New in version 1.8.

Note: Unfortunately a detailed description of this controller mapping is still missing. If you own this controller, please consider contributing one.

17.1.3 Allen & Heath Xone:K2

The Allen & Heath Xone:K2 is a flexible controller that is mapped to control Mixxx's decks, effects, or both. It has an integrated 4 channel audio interface with 2 RCA jacks and an 1/8" stereo headphone jack. The Xone K1 is the same as the Xone K2 but without the built in audio interface and does not come with the EVA travel case that the K2 comes with.

- Manufacturer's product page

- Forum thread

- Manufacturer's User Guide

- Blank template diagrams

New in version 1.11.

Audio Setup

The Xone:K2 is setup in Mixxx > Preferences > Sound Hardware > Output

Output	Device	Channel
Main	XONE:K2	Channel 3 - 4
Headphones	XONE:K2	Channel 1 - 2

Note: This Channel setup is the opposite of what most DJ controllers with an integrated audio interface use. The design choice to not use Channel 1 - 2 for main output is known to cause problems, when users want to use the Xone:K2 as default system audio output as the operating system will always use Channel 1 - 2. Thus system audio will go to the headphones.

There are no hardware controls for the volume so they are always at max volume. Adjusting the volume of main and headphone outputs is done by adjusting the gain for those outputs in Mixxx using the controller mapping.

Setup

Requirement: The Xone K2 must have Latching Layers turned off, which is the default. Refer to the Xone K2 manual page 12 for details. The K1 does not have Latching Layers.

This mapping can used with one or multiple Xone K2s/K1s. Multiple Xone K2s/K1s can be connected to each other via X-Link with one of them connected to the computer via USB. Alternatively, when using 2 K2s/K1s, they can both be connected with their own USB cable and this same mapping can be loaded for each.

The layout of the mapping depends on the configured MIDI channel of the controller. Change the MIDI channel of the controller by pressing the bottom right encoder (labeled "Power On Setup/Scroll/Set") while plugging in the controller. Scroll with the encoder to select a MIDI channel. The letter in parentheses corresponds to the last lit button when selecting the channel:

- Channel 15 (O, default out of the box): two decks + two effect units with decks in the middle

- Channel 14 (N): two decks + two effect units with effect units in the middle

- Channel 13 (M): two decks + two effect units with decks on left

- Channel 12 (L): two decks + two effect units with decks on right

- Channel 11 (K): four decks ordered 3 1 2 4

- Channel 10 (J): four decks ordered 1 2 3 4

- Channel 9 (I): four effect units ordered 3 1 2 4

- Channel 8 (H): four effect units ordered 1 2 3 4

Global Controls

These are available on any configuration with decks, but not the 4 effect unit layout.

- Bottom left encoder:

    - adjust tempo of all decks with sync enabled

    - press and turn: PFL/main mix in headphones

    - shift: headphone gain

    - press with shift: toggle split cue mode

- Bottom right encoder:

    - scroll through tracks in library

    - press and release: load selected track into first stopped deck

    - press and hold: load selected track into a deck by pressing the play button of the deck

    - shift: main gain

Decks

The bottom right button is the shift button. The bottom left button toggles the bottom button grid between a loop layer (amber) and a hotcue layer (red). Holding shift then holding the bottom left layer button at the same time activates supershift mode.

- Top encoder: jog

    - shift: gain

    - supershift: adjust key

- Top encoder press: reset gain

    - shift: sync lock

    - supershift: reset key

- Knobs: high/mid/low equalizer knobs

- Top button 1: headphones/PFL

    - shift: reset tempo

    - supershift: set beatgrid to current position

- Top button 2: cue

    - shift: go to beginning of track and stop

    - supershift: keylock

- Top button 3: play

    - shift: reverse

    - supershift: quantize

- Fader: volume

- Bottom buttons (intro/outro cue layer, amber): Intro/outro cues from top to bottom are ordered: - Intro start - Intro end - Outro start - Outro end

    - press: jump to that cue or sets it if it is not set

- – shift: seek forward/back. The top two (intro) buttons seek quickly; the bottom two (outro) seek slowly

  – supershift: delete cue

- Bottom buttons (hotcue layer, red): Hotcues are ordered 1-4 from top to bottom

  – press: jump to that hotcue or sets it if it is not set

  – shift: seek forward/back. The top two buttons seek quickly; the bottom two seek slowly

  – supershift: delete hotcue

- Bottom buttons (loop layer, green):

- Bottom button 1 (red): reloop/disable loop

  – shift: jump to to beginning of loop, stop playback, and activate loop

  – supershift: set loop in point. Hold to move loop in point with play position.

- Bottom button 2 (green): activate loop of selected size

  – shift: activate rolling loop of selected size

  – supershift: set loop out point. Hold to move loop out point with play position.

- Bottom button 3 (amber): double loop size

  – shift: beatjump forward by selected size if no loop is enabled. If loop is enabled, move the loop forward by the beatjump size.

  – supershift: double beatjump size

- Bottom button 4 (amber): halve loop size

  – shift: beatjump backward by selected size if no loop is enabled. If loop is enabled, move the loop backward by the beatjump size.

  – supershift: halve beatjump size

Effects

The top part of the column uses the *Standard Effects Mapping*. Pressing the top encoder acts as the effect focus button. When no effect is focused, the buttons are red. When holding the top encoder to choose an effect to focus, the buttons are green. When an effect is focused, the buttons are amber.

The fader acts as the mix knob.

The bottom buttons assign the effect unit to different input channels and light up red. On the two deck layouts, from top to bottom, they assign the effect unit to deck 1, deck 2, main mix, and headphones. On the four effect unit layouts, they assign the effect unit to decks 1-4 going down the column. You can look down a column to see which decks an effect unit is assigned. You can look across a row to see which effect units are assigned to a deck. When shift is pressed, the bottom two buttons switch to controlling the routing buttons for the main and headphones channels and light up amber.

The bottom encoders are not mapped in the 4 effect unit layout.

Effect unit focusing

In addition to focusing one effect in a unit at a time with the *Standard Effects Mapping*, the Xone K2/K1 has another mode for focusing a whole effect unit. This allows for controlling the parameters of all 3 effects in the unit at a time. This mode is only available on the 4 effect unit layouts. To access it, press the Layer button in the bottom left. Press one of the top encoders to choose which effect unit to focus.

In this mode, each horizontal row of knobs and buttons controls one effect. The knobs control the parameters of the effects. Turning any of the knobs with shift loads different effects. The button in the leftmost column controls the enable button of the effect and turns amber when it is on. The rest of the buttons control the button parameters of the effect and turn green when active (not all effects have button parameters). The faders still control the dry/wet knobs and the bottom button grid still controls the routing buttons.

To get back to controlling all 4 effect units, press the Layer button again. The next time Layer is pressed, the effect unit that was focused before will be remembered (but it will not be remembered after restarting Mixxx).

Troubleshooting

If general functionality or supershift are not working, double check that Latch Layers is turned off and MIDI CH is selected. Refer to the Xone K2 manual page 12 for details.

Known Issues

There are a few known issues with the Xone K2/K1 firmware:

- Since there is no way for Mixxx to ask the controller about the positions of all the knobs and faders when Mixxx starts, they are out of sync with the state of Mixxx until they are first moved.

- When the USB connection is interrupted and the controller stays powered on, such as leaving the controller plugged into a powered USB hub and disconnecting the hub from the computer, the controller will not send MIDI input until it is powered down (unplugged) and plugged back in.

If you would like these issues to be fixed, please let Allen & Heath Support know.

17.1.4 American Audio Radius 2000

A CD and USB media player that can control Mixxx over USB with MIDI. It can also play timecode from CDs or USB drives which can control Mixxx when they are connected by a sound card.

- Manufacturer's product page

New in version 1.10.

Note: Unfortunately a detailed description of this controller mapping is still missing. If you own this controller, please consider contributing one.

17.1.5 American Audio VMS2

The American Audio VMS2 is a 2-deck all-in-one controller. It is a USB class compliant MIDI and audio device that works with GNU/Linux, Mac OS X, and Windows. It features a 4 channel input and 4 channel output sound card with 2 phono preamps. The main output has XLR and RCA outputs (do not use both at once). There is a separate RCA booth output. The VMS2 can also be used as a stand-alone mixer with analog sources without a computer by setting the USB/Analog switches on the front of the device to "Analog".

- Manufacturer's product page, provides manual and drivers for download.

- Forum thread, for discussion of mapping options.

- Pull Request, which this wiki page describes.

New in version 1.11.

Audio Setup

No driver needs to be installed on GNU/Linux or Mac OS X. However, on Windows, it is recommended to install the driver from the manufacturer to be able to use the *ASIO sound API*.

Unlike most controllers with built in sound cards, which rely on Mixxx to do all mixing in software, the VMS2 mixes signals from the sound card in hardware. To use it with Mixxx:

- Bypass the built-in hardware equalizer of the VMS2 (i.e. use Post-EQ Mode). Hold the forward search button on the right deck as you turn the VMS2 on to switch between Post-EQ and Pre-EQ modes. See section 15 of the manufacturer's manual for details.

- Set the USB/Analog switches on the front side of the VMS2 to "USB"

- In Mixxx's Sound Hardware Preferences:

- Set the sample rate to 48000 Hz

- Select channels 1-2 for Deck 1 output

- Select channels 3-4 for Deck 2 output

Note: You cannot use the preview deck to pre-listen in this setup, as Mixxx routes the preview deck to Mixxx's headphone output, which is not mixed with the Deck 1/2 outputs. You could use a separate soundcard and route the headphone output there to also pre-listen using the preview deck. Of course, if you do so, attach the headphones to that other soundcard instead of the VMS2.

Input and Recording

The analog inputs are captured by the built-in soundcard as input signals. They can be used for timecode signals (e.g. time-code vinyl), as the VMS2 also features built-in phono preamps. FIXME I did not try that, please verify!

The microphone input is mixed directly into the main output signal of the VMS2 in hardware and cannot be captured through software. If you want to record voice over using the Mixxx software, you will need a different solution. You can use a separate microphone attached to the computer, but that signal will not be routed to the VMS2 and therefore not be on the VMS2 main output (but in the Mixxx recording from the software main/record output).

Mixxx's Deck 1/2 outputs are affected by the Mixxx software EQs. However, the VMS2's volume faders and crossfader (as well as the headphone buttons) control the VMS2's hardware mixer and do not affect Mixxx's Deck 1 and Deck 2 output signals. Therefore, a recording using the Mixxx software will sound different from what is played through the VMS2 main output, as the crossfader curve and signal mixing are not the same in hardware and software. If you require a recording that captures exactly what the audience will hear, use a separate soundcard and recording software to record from the VMS2 booth output.

Mapping description

Mixer section

All main functions are mapped straightforwardly:

VMS2 Control	Mixxx Control
Crossfader	Crossfader
Volume Fader	Volume Fader
Cue (PFL)	PFL
Cue Mix	Cue Mix (PFL / Main)
Headphone Gain	Headphone Gain
Channel Gain	Channel Gain
Master Gain	Main Gain

As noted in the *#Audio Setup* section, these control the VMS2's hardware mixer. Although the state of the controls is reflected on screen in Mixxx, the actual mixing is done by the VMS2's hardware mixer.

Deck Control

Deck control is straightforward, too:

VMS2 Control	Mixxx Control
Play	Toggle deck play/pause
Pause	Pause the deck
Cue	Cue Point (configure behavior in software)
Pitch +/-	Temporary pitch bend +/-
Pitch Fader	Pitch Fader
Range (Shift+Sync)	Cycle pitch fader range (+-8/10/30/100%)
Sync	Sync to other deck
Search <</>>	Search through currently loaded track
Keylock (Shift+Vinyl)	Toggle pitch independent time stretch (KeyLock)
Vinyl	Toggle between Scratch mode and Pitch mode
Platter	Touch sensitive platters! Scratch or Pitchbend
Shift + Platter	Scroll through library quickly

In Pitch mode, moving the platters from either the top or side will only bend the pitch of the deck. In Scratch mode, the platters act like vinyl turntables and can be used for scratching. Touching and holding them from the top stops the deck. Moving them from the edge does not stop the deck.

Library and Track loading

Use the encoder in the center of the controller to browse through the library. Press the encoder to switch between library main window and sidebar. Unfortunately there seems to be no way to expand entries in the sidebar through the controller script.

Use the [LOAD] buttons to load the currently selected track into either the left or right deck.

The four directional buttons around the knob also control the library:

Button	Library function
Up	Previous library entry
Down	Next library entry
Left	Previous sidebar entry
Right	Next sidebar entry

If you hold Shift and then rotate a platter, you can scroll through the library much faster.

Equalizer

The per deck EQ rotaries are mapped to their software counterparts. The VMS2 has no dedicated kill switches for the EQ. However, in Mixxx, pressing the following buttons with Shift acts as EQ kill switches.

VMS2 Control	Mixxx Control
Shift+IN	Kill Switch Low
Shift+OUT	Kill Switch Mid
Shift+RELOOP	Kill Switch High

Hotcues

The VMS2 can control 6 hotcues per deck.

VMS2 Control	Mixxx Control
1 / 2 / 3	Set/Jump HotCue 1 / 2 / 3
Vinyl + 1 / 2 / 3	Delete HotCue 1 / 2 / 3
4 / 5 / 6 = (Shift + 1 / 2 / 3)	Set/Jump HotCue 4 / 5 / 6
Vinyl + 4 / 5 / 6 = (Vinyl + Shift + 1 / 2 / 3)	Delete HotCue 4 / 5 / 6

Pressing the vinyl/keylock button will not toggle scratch mode or keylock as long as a hotcue is deleted before releasing the vinyl/keylock button.

Loops

VMS2 Control	Mixxx Control
IN	Mark beginning of loop
OUT	Mark end of loop
RELOOP	Leave / Reenter current loop
LOOP	Start a 4 Beat loop from current position
Smart (Shift + Loop)	Toggle quantize
(:2) / (*2)	Halve or double the current loop length

As Mixxx currently only supports one active loop per deck, the secondary loop controls have been remapped to EQ kill switches.

17.1.6 American Audio VMS4/4.1

The original VMS4 has problems with sound quality. The microphone input impedance is off and the output volume is low. The VMS4.1 is the same controller, except that those hardware issues have been fixed. The Traktor edition has different labels on some buttons & knobs, but it's otherwise the same hardware as the VMS4.1.

- VMS4

- VMS4.1

- VMS4.1 Traktor edition

New in version 1.9.

Setup

Note: Mixxx expects the VMS4 to be set to "Post EQ" mode for best sound quality. Do this by holding down the Headphone Cue button on Midilog 4 while powering on the unit. You only need to do this once. (Each time you do, it changes the mode back and forth.) Consult the user manual for more information.

To check the status of this in Linux, at a console, issue the command `lsusb -v|grep 'iSerial\|iProduct'` and look at the serial number under the VMS4 device per the instructions in the user manual. As of this writing, the leading digit should be **1**.

---

1. Make sure the VMS4 is off

2. Slide the switch on the front of the VMS4 to "8 OUT"

    - If you're using vinyl control or aux devices (or Mixxx 1.11 & below) set the switch to "4 OUT" for 2-deck output and 2-deck input

3. Turn on the unit (and plug in the USB cable if you haven't yet)

4. Start Mixxx

5. Open Preferences

6. Click Sound Hardware. In the right pane:

    1. Set the sample rate to **44100Hz**

    2. Set the Main output to **None**

    3. Set the Headphone output to **None**

    4. Set the Deck 1 output to the **VMS4** device and **Channel 3-4** (may show as "USB Audio Device" on Windows)

    5. Set the Deck 2 output to the **VMS4** device and **Channel 5-6**

    6. Set the Deck 3 output to the **VMS4** device and **Channel 1-2**

    7. Set the Deck 4 output to the **VMS4** device and **Channel 7-8**

        - If you're using 4 OUT mode, (for vinyl control/aux input or Mixxx 1.11 & below):

            1. Set the Deck 1 output to the **VMS4** device and **Channel 1-2**

            2. Set the Deck 2 output to the **VMS4** device and **Channel 3-4**

            3. For vinyl control, set the Vinyl Control 1 input to the **VMS4** device and **Channel 1-2**, connect a turntable to Midilog 1, and set it to Analog.

---

4. For vinyl control, set the Vinyl Control 2 input to the **VMS4** device and **Channel 3-4**, connect a turntable to Midilog 4, and set it to Analog.

7. Plug your headphones into the VMS4's jack on the front. You will use the VMS4's CUE buttons and knobs for headphone control.

8. Still in the Preferences, expand "Controllers" on the left

9. Select the "VMS4 MIDI" device (may show as "USB Audio Device" on Windows)

   • Do not choose the the HID one. That's for the little mouse pad and button area.

10. Click the Enable checkbox in the right pane

11. Click the drop-down and choose the *American Audio VMS4* preset

12. Click OK and the controller should light up. (In 1.9.x, the controller will light up when you load a track to a deck.)

13. Continue reading below to know how everything is mapped

Direct deck output implications

This setup uses direct deck outputs because mixing takes place in the VMS4 hardware. The down side to this is that you won't be able to use Mixxx features that play to Main or Cue buses like the Preview Deck or Samplers. Using these features with a hardware + MIDI mixer like the VMS4 is not really feasible unless you used a separate sound interface or controlled Mixxx's internal mixer another way.

Control

This guide explains how the VMS4 is mapped by default in Mixxx.

Easy customization: We have provided the following customization variables at the top of the script you can set to your liking:

1. **RateRanges**: Set the pitch slider range each time you toggle it with Shift+Sync.

Just open the `midi/American-Audio-VMS4-scripts.js` file in your favorite text editor (Wordpad works too) and you'll see these variables right near the top. Edit & save, then restart Mixxx and enjoy.

Deck controls

Note: There are a number of different face plates in the wild so these images and control descriptions may not exactly match yours. The locations of the controls are the key things to pay attention to.

The controls are the same on both sides of the controller. The left side controls Deck 1 and the right side controls Deck 2.

• **Sync/Range** button - Changes the BPM of this deck to match that of the other. When shifted, toggles the pitch slider range. (See top of page to customize.)

• **Hot cue buttons** - Press to set or recall a hot cue. The buttons light up red when one is set. Hold Shift and press to access hot cues 5-8. (The buttons light up blue for these.) Hold Vinyl and press to delete the cue. (Note: there is a bug in some firmware versions that causes hot cues 5 and 6 to be deleted simultaneously.) the cue.

• **Pitch Bend +/-**

• Momentarily speeds up or slows down the deck while the button is held down.

• Hold Shift and press to adjust the key (pitch) of the song (independent of the tempo.)

- **Loop In** - Set the in point of a loop

- **Loop Out** - Set the out point of a loop

- **Reloop** - Toggle a previously-set loop. Lights red when a loop is active.

- **Loop/Smart** Start a 4-beat loop. Hold Shift and press to toggle quantization (locking to the nearest beat.)

- **Vinyl/Keylock** - *(Does nothing on its own when un-shifted at the moment.)* When shifted, toggles key lock.

- **<< Search/ /2** - Fast-rewind Hold Shift and press to halve the current loop length

- **Search >>/ *2** - Fast-forward Hold Shift and press to double the current loop length

- **Touch strip** Scroll through the respective Library panes. (Left for the folders/crates list, right for the track list.) Hold Shift and touch: - to affect the Dry/Wet knob on the respective effect unit while the deck is playing - for Needle drop - search through the track while the deck is stopped

- **Wheel** Move the wheel while touching the top to scratch the current track like a vinyl record Move the wheel without touching the top (so on the sides) to perform a temporary pitch bend

- **CUE** - Operates according to the Cue mode set in Mixxx's preferences Hold Shift and press to play immediately from the cue point (known as Cue+Play or CUP.)

- **Play** - Press to toggle deck playback Hold Shift and press to set this deck as the leader for syncing with another

- **Pause** - Stops the deck playback

Effects section

The left side controls effect unit 1 and the right side controls effect unit 2.

- **Select knob**

- Rotate to choose the effect chain preset

- Press to toggle whether the effect unit is on or not

- **Control knob**

- Adjusts the wet/dry ratio

- When Parameter is on, this becomes the Wonder Knob, adjusting all effect parameters at once

- **On/Off** - Toggles the effect for the deck matching the effect unit number

- **Parameter** - Toggles what the above Control knob adjusts

Sample section

The left side of the controller controls Sampler 1, and the right, Sampler 2.

- **Select knob** Rotate to move the highlight in the library. Press to load the currently highlighted track into the sampler. Hold Shift and press to eject the current track from the sampler (when the sampler is not playing.)

- **Volume knob** - Adjusts the volume of the sampler

- **Play** Press to play the sample from the beginning. Press while playing for a stutter-play effect (play again from the beginning.) Hold Shift and press to stop playing.

- **Rec** - *Currently does nothing*

Mixer controls

The volume sliders don't control the ones in Mixxx because direct Deck outputs are affected by Mixxx's internal ones.

- **Midilog 1:** This strip controls Deck 3/C
- **Midilog 2:** This strip controls Deck 1/A
- **Midilog 3:** This strip controls Deck 2/B
- **Midilog 4:** This strip controls Deck 4/D

17.1.7 Behringer BCD2000

The Behringer B-Control Deejay BCD2000 features a USB 4-channel audio interface plus 24-bit A/D and D/A converters.

This controller has been discontinued. The *Behringer BCD3000* is its successor.

- Manufacturer's product page
- Forum thread

New in version 1.11.

Note: Unfortunately a detailed description of this controller mapping is still missing. If you own this controller, please consider contributing one.

17.1.8 Behringer BCD3000

- Manufacturer's page

The B-Control Deejay BCD3000 controller is a 4-channel audio interface. It offers a fully fitted controller console with 24-bit A/D und D/A converters, a USB audio interface with a microphone preamplifier, a 3-band kill EQ for each channel, faders, a crossfader and talkover function.

By default, the input channels 1-2 use the RCA phono inputs for the source signal. On Windows, this can be switched to the microphone in the ASIO driver control panel. On GNU/Linux and Mac OS X, a particular MIDI message must be sent to switch channels 1-2 to the microphone input.

New in version 1.6.

Note: Unfortunately a detailed description of this controller mapping is still missing. If you own this controller, please consider contributing one.

17.1.9 Behringer BCR2000

- Manufacturer's product page
- Forum thread

The B-CONTROL BCR2000 is a general-purpose *USB MIDI* controller containing 20 buttons, 24 rotary encoders and 8 push encoders. Every control is backed by LEDs that show the current value. As a pure MIDI controller it contains no interfaces for audio or microphones.

The controller can be be configured extensively. It offers 32 presets that may be programmed by the user.
Fig. 1: Behringer BCR2000 (schematic view)

New in version 2.3.

Compatibility

This controller is a class compliant USB MIDI and audio device, so it can be used without any special drivers on GNU/Linux, Mac OS X, and Windows.

Setup

Controller Preset

The default mapping works out-of-the-box for the factory settings of controller preset 1.

If you don't want to use this preset, you can choose one of the following options:

1. Load the dump file `bcr_Only_Controllers.syx` via Sysex to any other preset slot and update the preset number in the `init` function in the file `Behringer-BCR2000-scripts.js`. The dump file and instructions how to install it in the controller is available on the manufacturer's webpage.

2. Factory reset the controller.

Button Behaviour

It is recommended, but not required, to change the button behaviour from *Toggle On* (default) to *Toggle Off*. Both behaviours send an `On` message on button press, but the action to send an `Off` message is different: *Toggle Off* responds to a button release while *Toggle On* ignores the release and requires a second press. To change the behaviour:

1. Hold EDIT, press a button, then release both

2. Turn the MODE encoder until the display shows `toFF`

3. Press the EXIT button

To make the change persistent, press *Store* twice. See the controller manual for details.

Mapping Description

The BCR2000 is a general purpose controller that allows different mappings.

The file `Behringer-BCR2000-scripts.js` contains a default mapping which works out-of-the-box for a factory-reset controller, but may be customized freely according to your needs.

The controls are divided into five parts:

* Top left area (4 push encoders + 4 buttons): loop, reverse & pitch controls for Deck 1

* Top right area (4 push encoders + 4 buttons): loop, reverse & pitch controls for Deck 2

* Middle left area (4 buttons + 4 encoders): controls for Effect Unit 1

* Middle right area (4 buttons + 4 encoders): controls for Effect Unit 2

* Bottom right area (4 buttons): controls for assignment of effect units to decks

Control			Description
Location	Affects	Hardware control	
Push Encoder Row	Deck 1	Encoder 1 (TYPE)	• Rotate: Manipulates the key of the track in semitones. • Push: Resets the key to the original track key.
	Deck 2	Encoder 5 (VAL 2)	
	Deck 1	Encoder 2 (CH)	• Rotate: Increases or decreases the size of the current loop in beats.
	Deck 2	Encoder 6 (VAL 2)	
	Deck 1	Encoder 3 (PAR)	• Rotate: Moves the current loop left or right.
	Deck 2	Encoder 7	
	Deck 1	Encoder 4 (VAL 1)	• Rotate: Increases or decreases the number of beats to move the loop.
	Deck 2	Encoder 8	
Button Row 1	Deck 1	Button 1	• Press: Toggles key-lock. • Shift + Press: Toggles vinyl control mode.
	Deck 2	Button 5	
	Deck 1	Button 2	• Press: Toggles a loop that ends at the current play position. • Shift + Press: Toggles a rolling loop. Playback will resume where the track would have been if it had not entered the loop.
	Deck 2	Button 6	
	Deck 1	Button 3	• Press: Toggles reverse playback. • Shift + Press: Toggles rolling reverse playback. Playback continues where the track would have been if it had not been temporarily reversed.
	Deck 2	Button 7	

Table 1 – continued from previous page

Control			Description
Location	Affects	Hardware control	
	All controls	Button 4	• Press: Toggles shift. Shift changes the behaviour of controls as described in this table, and additionally the behaviour of the effect units. See *Standard Effects Mapping* for details.
	All controls	Button 8	**Note:** Both Shift buttons have the same effect, they are not deck-specific. This design decision was made to keep the layout symmetric so that you don't have to press a button on the left side when you're working on the right side.
Button Row 2	Effect Unit 1	Button 1	• Press: Toggles effect focus mode.
	Effect Unit 2	Button 5	• Shift + Press: Toggles effect unit.
	Effect Unit 1	Button 2	• Press: Toggles parameter button 1.
	Effect Unit 2	Button 6	
	Effect Unit 1	Button 3	• Press: Toggles parameter button 2.
	Effect Unit 2	Button 7	
	Effect Unit 1	Button 4	• Press: Toggles parameter button 3.
	Effect Unit 2	Button 8	
Encoder Row 1	Effect Unit 1	Encoder 1	• Rotate: Adjusts the mixing of the dry (input) signal with the wet (output) signal of the effect unit.
	Effect Unit 2	Encoder 5	
	Effect Unit 1	Encoder 2	• Rotate: Controls the parameter of effect 1.
	Effect Unit 2	Encoder 6	
	Effect Unit 1	Encoder 3	• Rotate: Controls the parameter of effect 2.
	Effect Unit 2	Encoder 7	
	Effect Unit 1	Encoder 4	• Rotate: Controls the parameter of effect 3.
	Effect Unit 2	Encoder 8	
Button Box Row 1	Deck 1	Left Button	• Press: Toggles assignment of Effect Unit 1.
	Deck 2	Right Button	
Button Box Row 2	Deck 1	Left Button	• Press: Toggles assignment of Effect

- PDF, DIN A4
- PDF, DIN A3
- ODG (LibreOffice)
- SVG (without labels)

17.1.10 Behringer CMD Micro
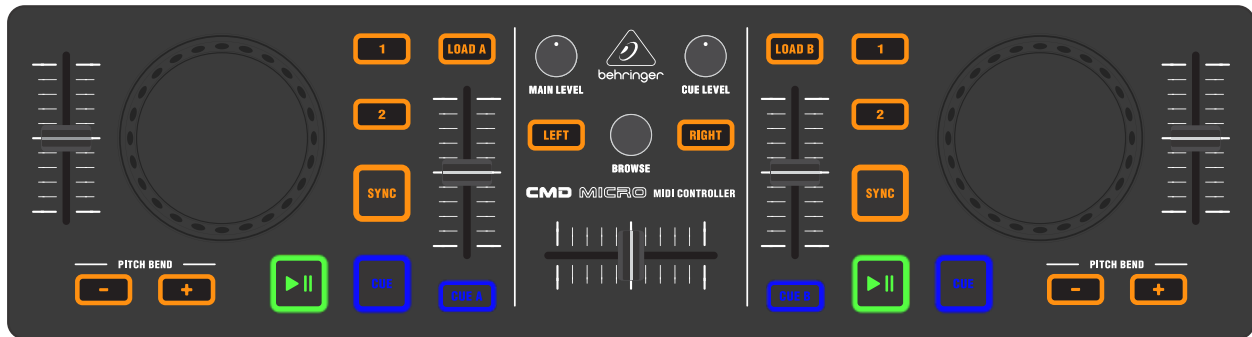

Fig. 2: Behringer CMD Micro (schematic view)

The *Behringer CMD Micro* is a simple controller for basic two-channel mixing. This device does not have a built in sound card, so it would require a *splitter cable* or *separate audio interface* to be able to preview tracks in headphones.

- Manufacturer's product page

New in version 2.1.

Mapping description

- **Cue**, **Play/Pause**, **Sync**, **Load A**, **Load B**, the **Level / Browse** knobs, and the **crossfader** all behave as labeled.
- **Cue A** and **Cue B** send the respective track to the headphones.
- The inner vertical sliders control the track's volume.
- The outer sliders control the playback speed.
- The **1**, and **2** buttons toggle a 4 and 8 beat loop, respectively.
- The **Pitch Bend** buttons temporarily adjust the playback rate. They can be configured to change the key of the track instead by setting the PitchBendsKey option to true at the top of the JS file (open the JS file in a text editor such as Notepad, TextEdit, or gEdit to change this). With the PitchBendsKey option, when both buttons are pressed simultaneously, the key is reset to the track's default key.

Jog Wheels

The jog wheels are touch enabled. When the top is pressed, they emulate turntable scratching. When the side is touched, they affect the playback speed (jog).

17.1.11 Behringer CMD MM-1

The Behringer CMD MM-1 is a flexible controller that controls 4 decks by default. The mapping can be easily configured to control any combination of decks and effect units. The Behringer CMD DC-1 and Behringer CMD DV-1 are designed to be used together with the CMD MM-1, but the CMD MM-1 can be used alone or with other controllers (especially the *Novation Launchpad*).

- Manufacturer's product page
- Forum thread

New in version 2.1.

Mapping description

Architecture

The controller has four strips of channels, each of which can be configured to control a different Deck or even an EffectUnit. These options can be changed during runtime via the Buttons in the of the **ThirdLayer**. You can find more about how to use this at the end of this document.

Mapping options

There are a few user configurable options available for you to customize. You can change these by opening the `Behringer-CMD-MM-1-scripts.js` file with your text editor of choice (such as Notepad, TextEdit, Kate, or gEdit) and editing the lines at the very top of the file.

- channelNumber: change this if your *controller LEDs do not light up*.
- invertColor: Swaps the colors which suits certain skins more
- defaultChannelSequence: Defines how the channels are mapped when Mixxx starts
- channelMode: Defines if a channel is in Deck or FX Mode when Mixxx starts
- faderMode: Defines how the faders behave in FX Mode by default
- standardKnobBehavior: Defines the mapping of the knobs when Mixxx starts
- navEncoderScale: the factor of speedup when using the encoder with a modifier

Top row

Fig. 3: Behringer CMD MM-1 (top row)

The top left knobs control the main balance and main gain. The top right knobs control the headphone gain and cue mix (PFL/main mix in Headphones output).

You can see the L/R buttons besides the encoder as [*SHIFT*] and [**CTRL**] buttons. These allow each button to have up to four functionalities. They behave like the Shift and Control keys on a computer keyboard.

Knobs

The Knobs have three different modes which can be cycled while in operation. The knobs in each mode, from top to bottom, control:

1. Deck: High, Mid, Low, QuickEffect (filter by default)

2. Deck: Gain, High, Mid, Low

3. Effect Unit: Meta 1, Meta 2, Meta 3, Mix

The Effect Unit number is the same as the channel/deck number, so the channel that controls the knobs/buttons/faders of deck 1 also controls the knobs of EffectUnit1, Channel 2 controls EffectUnit2, and so on.

FX Mode

The Knobs in FxMode overwrite the assigned mapping and are mapped as [Effect 1 Meta, Effect 2 Meta, Effect 3 Meta, Super] and the fader is also mapped to the mix of the EffectUnit. The buttons are documented in their own section.

Middle button

- Normal: recenter Crossfader
- Shift: Cycle Knob assignment (swaps the mapping of the knobs as mentioned earlier)

Buttons

Deck Mode

[1]&[2] Buttons:

- Normal: Change Crossfader side (Orientation)

- Shift: Toggle Fx1&2 for desired Channel

- Ctrl: Toggle Fx3&4 for desired Channel

- Third: Change ChannelNumber/Assignment

[CUE] Buttons:

- Normal: Pre-Fader-Listening

- Shift: Load selected Track to Deck

- Ctrl: enable Sync for the Deck.

- Third: Change Channelmode

FX Mode

Fig. 4: Behringer CMD MM-1 (FX mode)

[1]&[2] Buttons:

- Normal: Toggle Effect 1&2 in desired FxUnit

- Shift: Toggle Channel1&2 for desired FxUnit

- Ctrl: Toggle Channel3&4 for desired FxUnit

- Third: Change ChannelNumber/Assignment

[CUE] Buttons:

- Normal: Toggle Effect 3 for desired FxUnit

- Shift: Pre-Fader-Listening for FxUnit

- Ctrl: change mix_mode of Unit

- Third: Change Channelmode

Faders

DeckMode:

- Normal: Volume Fader

FxMode:

- EffectUnit Mix (dry/wet)

- Third: Reconfigure Fader to control Rate/BPM/Pitch of the Channel as if it was in Deckmode

Reassigning channel mode and number

The channel modes and numbers can be set by changing the *#mapping options* at the top of the script. They can also be changed while using the controller when in **thirdMode**. Pressing the cue- button toggles between Deck and FX Mode. The Channel number is assigned with the [1]&[2] buttons.

They are mapped in a sort of two bit encoded system:

- ☐ & [ ] = Channel 1

- ☒ & [ ] = Channel 2

- ☐ & [x] = Channel 3

- ☒ & [x] = Channel 4

So you can change between channel 1&3 by pressing the [1] button, and channel 2&4 by pressing the [2] button.

You can change the Channel mode (Deck/Fx) via the Cue Button. (Note: there is a rare issue where you have to change the Channel mode after the assignment for it to work. So it is suggested that you always change the assignment first).

Troubleshooting

Controller does not light up

The issue is probably the MIDI channel of your MM-1. Behringer had a tool that can set the controller to a different MIDI channel, however this is no longer available for download from Behringer's website. So you will have to modify the controller mapping to use the MIDI channel that your controller is set to.

Once you know the MIDI channel of your controller, open the file `Behringer-CMD-MM-1-scripts.js` file with your text editor of choice (such as Notepad, TextEdit, Kate, or gEdit) and replace the number 5 in the line where it says `var CHANNELNUMBER = 5;`. Then, open the file `Behringer CMD-MM-1.midi.xml` in the same folder and replace the 4 at the end of 0x94, 0x84 and 0xB4 with your channel number - 1. Restart Mixxx, reload the mapping in Mixxx's preferences, and then it should work.

17.1.12 Behringer CMD STUDIO 4a

The Behringer CMD STUDIO 4a is a 2 deck controller that supports 4 virtual decks and has a built in 4 channel (one stereo main, one stereo headphones) USB sound card built in.

- Manufacturer's product page
- Mixxx Forum Thread

New in version 2.1.

Mixxx Sound Hardware Preferences

- Main output: channels 1-2
- Headphone output: channels 3-4

Mapping description

Most of the buttons and knobs on the controller behave as they are labelled:
Fig. 5: Behringer CMD STUDIO 4a (top view)

The only major departure from the above are the 4 "FX Control" knobs and buttons at the top of each deck.

Mixer

- The HIGH, MID, and LOW EQ knobs & kill buttons, deck faders, cross-fader, main, and headphone monitoring (mix & volume) knobs all operate as labelled.

- Each deck also has a gain knob (leftmost "FX Control" knob).

Navigation Control

- The BROWSE knob scrolls thorough the track list in the library panel.

- The BROWSE LEFT/RIGHT buttons move through the library tree (and can also select effects, see later).

- The ENTER button expands/collapses library tree items.

Deck Select Buttons

- The deck select buttons (A, B, C, D) make the respective "virtual" deck active.

- On the left deck: A = Channel 1, C = Channel 3.

- On the right deck: B = Channel 2, D = Channel 4.

Transport Control

- The deck LOAD buttons will load the currently highlighted track in the library window into that deck.

- The deck CUE, PLAY, SYNC, and LOOP buttons work as labelled (SYNC toggles sync lock for the deck).

Wheels

- While a track is playing, spinning the wheels temporarily speeds up or slows down the track.

- When a track is stopped, spinning the wheels results in a fast search.

- When the top wheel surface is touched the wheels act as as a precision jog.

- When the SCRATCH button is activated, moving the wheel while touching the top surface scratches the track.

Hot Cue Buttons

- If not currently set, pressing a HOT CUE button sets that hot cue at the current playback position.

- If already set, pressing a HOT CUE button jumps to that hot cue position.

- If the DEL button is *held*, pressing an already set HOT CUE button will clear that hot cue.

- Tapping the DEL button toggles *#DEL-mode*. The button will light up blue. DEL-mode alters some of the other button functions like a shift button on other controllers.

Playback Pitch/Rate

- The pitch sliders control the pitch.

- The PITCH BEND +/- buttons step the playback rate up or down (pressing both resets the rate back to normal).

- The LOCK buttons turn on key lock so the pitch doesn't change when the playback rate changes.

- The PITCH BEND button lights will indicate whether the current pitch is higher or lower than normal.

FX Control Buttons

These do not control effects; they have other functions:

- FX Control button 1 toggles the deck slip-mode on/off, (button lights blue when active). Slip-mode is not available in any Mixxx skin yet so may be unfamiliar. When slip-mode is active, playback continues (muted in the background) during a loop/scratch etc. Once disabled, playback will resume where the track would have been if the loop/scratch has not taken place (thus preserving the track beat).

- FX Control button 2 toggles the deck repeat mode, (button lights blue when active).

- FX Control button 3 can be tapped to adjust the beat-grid position.

- FX Control button 4 toggles the deck quantise mode on/off, (button lights blue when active).

FX Control knobs

- FX Control knob 1 = Deck gain.

- FX Control knob 2 = FX 1 "super" control (FX unit 1 on left deck, unit 3 on right deck).

- FX Control knob 3 = FX 2 "super" control (FX unit 2 on left deck, unit 4 on right deck).

- FX Control knob 4 = Deck "quick effect" control (by default this is a filter effect but can be changed in Mixxx's preferences).

FX Assign Buttons

- Tapping either of the 2 FX ASSIGN buttons on each deck will toggle the deck's output to one (or both) of two effects in the (default) 4-unit effects rack. The left deck (A or C) can be assigned to effect units 1 and/or 2. The right deck (B or D) can be assigned to effect units 3 and/or 4.

- *Holding* an FX ASSIGN button allows the effect in that effect unit to be changed using the BROWSE LEFT/RIGHT buttons.

DEL-mode

DEL-mode is activated by *tapping* the deck's hot cue DEL button (the button will light up blue). This is equivalent to a shift button on other controllers and so changes the behaviour of a number of the controller buttons as follows:

- The HOT CUE buttons act as auto-loop triggers (when *held*) in DEL-mode. The button layout follows the default "LateNight" skin (i.e. top row = [1/8] to [1], bottom row = [2] to [16] beats). Longer auto-loops can be "locked" (so the HOT CUE button doesn't have to be held) by pressing the LOOP ON/OFF button after an auto-loop is selected, (locked/playing auto-loops can also be resized by selecting a different auto-loop and then re-locking the new size with the LOOP ON/OFF button).

- The CUE button triggers reverse playback (while *held*).

- The PLAY button triggers reverse-slip playback (while *held*). NB: if you already have slip-mode activated before you trigger reverse-slip playback, (e.g. by having pressed FX-Control button 1), then slip-mode will be turned off as soon as you release the PLAY button (and you will return to the playback point where you would have been if you hadn't altered the playback).

- The PITCH BEND +/- buttons step the key up/down without altering the playback rate. If both PITCH BEND buttons are pressed together, the playback key is reset to normal.

Auto-Loops and Slip-Mode

There are no "slip-mode aware" skins in Mixxx yet so the auto-loop behaviour of this controller (which *is* "slip-mode aware") may be a little different than you might expect to take advantage of this feature.

- Auto-loop buttons are (by default) only active when held.

- In slip-mode, releasing an auto-loop button will immediately "re-sync" playback (by disabling, then immediately re-enabling slip mode), you may see the slip-mode button flash briefly when this happens. This allows for some very interesting "slip-auto-loop" effects.

17.1.13 Behringer DDM4000

The Digital Pro Mixer DDM4000 is a 5-Channel Digital DJ Mixer with Sampler, 4 FX Sections, BPM Counters and MIDI support. Each of the following sections can be configured separately to be used either for audio or as MIDI controller:

- Channel 1-4

- Microphone Channel

- Crossfader

- Sampler

The mixer contains no digital interfaces for audio or microphones.

- Manufacturer's product page

- User Manual

- Forum thread

New in version 2.3.

Compatibility

This controller contains a *MIDI* interface with 5-pin DIN jacks In/Out/Thru. If your soundcard does not offer DIN jacks, a separate USB/MIDI interface is required to use it on GNU/Linux, Mac OS X, and Windows.
Fig. 6: Behringer DDM4000 (schematic view)

Setup

Configure at least one mixer section as MIDI controller:

1. Long press the CONSOLE SETUP knob

2. Select `MIDI SETTINGS` by turning and pressing the CONSOLE SETUP knob

3. Select the sections that you want to use as MIDI controller

4. Press the ESC button to exit MIDI Setup

5. To make the change persistent, save the settings in a user preset. See the controller manual for details.

Controller Mapping

A schematic drawing with the control numbers that are used here can be found on the specified page in the User Manual in the Links section.

Stereo channels 1 – 4 (p. 6)

No.	Control	Function
4	HIGH / MID / LOW knobs	Adjust high/mid/low-frequencies.
6	P1 / P2 / P3 buttons	Toggle the kill function for high/mid/low-frequencies.
7	PFL button	Toggle headphone pre-fader listening.
8	Channel faders	Adjust the output volume.
10	CF ASSIGN button	Assign the channel to either side of the crossfader.

Note: On some units of this mixer, the LEDs of the buttons P1 / P2 / P3 show an unexpected behavior in MIDI mode. When such a LED is turned on via MIDI, it flashes shortly but does not stay lit. The problem occurs only when at least 1 channel is in audio (non-MIDI) mode. It does not occur when all channels are in MIDI mode. Firmware version 1.02 (Dec 14 2007) is known to show this behavior, and there's no fix available according to a reply from the technical support:

> "I see the issue, but sorry, the code is 15 years old and getting the 15 year old tools (plus license, plus old windows version) needed to compile it, together with finding the bug in a very complex code base (without access to the developer) makes fixing this nearly impossible."
>

Microphone (p. 6)

No.	Control	Function
19	TALK ON	Switch the Talkover function.
Fig. 7: Stereo channels strips
Fig. 8: Microphone channel

Crossfader section (p. 7)

No.	Control	Function
20	Crossfader	Fade between the signals that are assigned to its two sides A and B.
21	CF ON button	Toggle crossfader function. When disabled, the crossfader control in the Mixxx user interface is hidden.
24	CURVE knob	Adjust the response of the crossfader.
25	REVERSE HOLD button	Toggle a permanent reverse of the crossfader sides A and B. This means that A and B are interchanged.
26	REVERSE TAP button	Toggle a momentary reverse of the crossfader sides A and B. This means that A and B are interchanged as long as the TAP push button is held down.
Fig. 9: Crossfader section
Fig. 10: Sampler section

Sampler (p. 8)

No.	Control	Function
55	VOLUME/MIX knob	Control the volume of sampler 1.
57	PFL button	Toggle headphone pre-fader listening for sampler 1.
58	SAMPLE LENGTH buttons	Adjust the beatloop size of sampler 1.
61	MODE buttons for bank 1/2	Select the playback type for the selected sampler (Reverse or Loop). A short press toggles the Reverse function, a long press toggles the Loop function.
62	PLAY/OUT buttons for bank 1/2	Start or stop playback for the selected sampler. When the Loop function is disabled, the sample is only played back while the button is pressed.
63	SMP FX ON button	Toggle effect unit 1 for sampler 1.
65	CF ASSIGN button	Assign sampler 1 to either side of the crossfader.

New in version 2.0.

Note: Unfortunately a detailed description of this controller mapping is still missing. If you own this controller, please consider contributing one.

17.1.15 Denon DN-SC2000

- Forum thread

New in version 1.8.

Note: Unfortunately a detailed description of this controller mapping is still missing. If you own this controller, please consider contributing one.

17.1.16 Denon MC3000

- Manufacturer's product page (archived)

New in version 2.0.

Note: Unfortunately a detailed description of this controller mapping is still missing. If you own this controller, please consider contributing one.

17.1.17 Denon MC4000

The MC4000 is a 2-deck DJ controller for the professional entertainer wrapping in-demand audio manipulation tools in a robust steel chassis for rugged durability. In addition to precision touch-activated jog wheels, performers get access to dedicated hot cue and sample pads for on-the-fly remixes.

- Manufacturer's product page

- Manual / Midi commands

- Forum thread

The microphone and auxiliary inputs are mixed with the main output in hardware. They are not available to the computer through the MC4000's sound card, so this controller's sound card is not suitable for broadcasting or recording the inputs. You could use the controller with a separate USB sound card that has a microphone input for that purpose.

New in version 2.1.

Mapping Description

The Mixxx mapping is mostly the same as the standard Serato mapping, with a few exceptions which are highlighted below with *underlined text* where a specific functionality that exists in Serato is not (yet) implemented in the Mixxx mapping.
Fig. 11: Denon MC4000 (layout)

1. **Channel Level:** Adjust the level of the pre-fader, pre-EQ audio signal

2. **Channel EQ:** Boost or cut the high, mid-range, and low frequencies

3. **Channel Filter:** Turn counterclockwise to apply a low-pass filter. Turn clockwise to apply a high-pass filter.

4. **Channel Cue:** Send the channel's pre-fader signal to the headphones' cue channel.

5. **Channel Fader:** Adjust the channel's volume level.

6. **Crossfader:** Mix between the two decks.

7. **Shift:** Press and hold this button to access secondary functions of other controls.

8. **Sync / Sync Off:** Automatically match the corresponding Deck's tempo with the opposite Deck's tempo and phase. *Unlike Serato, Shift + sync is not mapped to anything.*

9. **Cue / Track Start:** Behavior changes according to the *cue mode selected in Mixxx's preferences*. Hold Shift and press this button to return to the start of the track.

10. **Play/Pause / Stutter:** Play/pause playback. Hold Shift and press to "stutter-play" the track from the cue point.

11. **Hot Cues:** Press a pad to set or jump to a hot cue point. To set a hot cue point, press an unlit pad at the desired location in the track (the pad will then be lit). To jump to that hot cue point, press the lit pad. To delete a hot cue point, hold Shift and press a lit pad.

12. **Pad Mode:** *Currently unmapped*

13. **Platter:** This capacitive, touch-sensitive platter controls the audio playhead when the wheel is touched and moved. When the Vinyl button is on, move the platter to "scratch" the track like a vinyl record. When the Vinyl button is off (or if you are touching only the side of the platter), move the platter to temporarily adjust the track's speed.

14. **Vinyl / Censor:** Toggle "vinyl mode" for the platter. When activated, you can use the platter to scratch the track as you would with a vinyl record. Hold Shift and this button to activate the Censor feature: the playback of the track will be reversed, but when you release the button, normal playback will resume from where it would have been if you had never engaged the Censor feature (i.e., as if the track had been playing forward the whole time).

15. **Key Lock / Range:** Toggle Key Lock. When Key Lock is activated, the track's key will remain the same even if you adjust its speed. Hold Shift and press to cycle through the available ranges of the pitch fader (+/- 8%, 16%, 50%). Other ranges for the fader can be selected in Mixxx's Preferences in the Interface section, but pressing this button with Shift will only cycle through 8%, 16%, and 50%.

16. **Pitch Bend -/+ :** Hold one of these buttons to momentarily reduce or increase (respectively) the speed of the track. Hold Shift and then press and hold one of these buttons to rewind or fast-forward (respectively) through the track.

17. **Pitch Fader:** Move this fader to adjust the speed (pitch) of the track. You can adjust its total range with the Key Lock / Range button.

18. **FX Level:** Turn the knobs on the left side of the controller to adjust the effect intensity (i.e. "meta" parameter) for the effects in Effect Unit 1. Turn the knobs on the right side of the controller to adjust the meta parameter for the effect in Effect Unit 2. The FX On button under the knob must be lit for the effect to be enabled.

19. **FX Beats:** Currently changes the wet/dry ratio of the effect chain. This will probably change in the future.

20. **FX On / Select:** Press to toggle the corresponding effect on or off. Hold Shift and press to assign a different effect to this slot.

21. **FX Tap:** *Currently not mapped*

22. **Auto-Loop / Auto 4:** Toggle a 4 beat loop on or off. Hold Shift and press to toggle beat quantize on or off (I.e quantization of loop start / end points to the nearest beat). *Note: this behavior is different from Serato.*

23. **X 1/2 Loop / Loop In:** Halve the length of the current loop. Hold Shift and press to create a Loop In point at the current location.

24. **X 2 Loop / Loop Out:** Double the length of the current loop. Hold Shift and press to create a Loop Out point at the current location.

25. **Reloop:** Exit the current loop if a loop is active, or skip to the last-played loop and activate it immediately if there is no loop active.

26. **Browse / Library Knob:** Turn to browse through the items in the currently focused pane (i.e. library or sidebar). Press shift and turn to scroll *quickly* through the items in the currently focused pane. Press the knob to select the current item.

27. **Load:** Load the currently selected track to the deck.

28. **Back / Panel:** Change the currently focused pane (i.e. library or sidebar) to the next or previous pane.

29. **Load Prep / Open Prep:** Load the currently selected track to the preview deck. Hold Shift and press to eject the current track from the preview deck. (*Different from Serato mapping*).

30. **Sampler Pads:** Press to play the corresponding samples in the software's sampler (1–4). Hold Shift and press a pad to stop its sample playback.

31. **Sample Level:** Turn this knob to adjust the volume level of the software's samplers (1–4).

32. **Level Meters:** These LEDs display the level of the audio signal depending on the state of each deck and Channel Fader. The meters are not affected by the position of the Master Knob.

33. **Mic Volume:** Adjust the input gain of the microphone. This adjusts the hardware microphone preamplifier, not Mixxx's mic gain. The microphone input is not available to the computer through the MC4000's sound card; it is mixed with the main output in hardware.

34. **Mic Echo:** Toggle an echo effect on the microphone input. This effect is done in hardware, not in Mixxx.

35. **Mic Talk Over / Post:** Toggle microphone talkover, which automatically reduces the volume of the music when using the microphone. Hold shift and press to toggle whether the microphone input is routed to the booth output. These controls are done by the MC4000 in hardware and do not affect Mixxx.

36. **Master:** Adjust the main output level of the sound card. This does not affect the main gain in Mixxx.

37. **Booth:** Adjust the booth output level of the sound card. This does not affect anything in Mixxx.

38. **Aux:** Adjust the auxiliary output level of the sound card. This does not affect anything in Mixxx.

17.1.18 Denon MC6000MK2

- Manufacturer's product page (archived)

- Forum thread

- Mixxx maintainer

New in version 2.0.

The number in the first column refers to the corresponding label in the *Owner's Manual* in the chapter *Part names and functions* starting on page 20.

# User Manual	Control	Modifier	Context	Function
1	BEATS/V.FX SEL.		Knob is turned	Effect unit dry/wet mix
			Knob is pressed	Focus/unfocus effect unit
2	TAP	NONE		Toggle (enable/disable) EFX unit
3	EFX 1/2/3 KNOB			Effect meta knob
4	EFX 1/2/3 ON			Enable/disable effect
5	EFX CH. ASSIGN	NONE		Assign/unassign deck
		SHIFT		Assign deck exclusively
6	LOOP IN	NONE		Set loop in point
		SHIFT		Delete loop
6	LOOP OUT	NONE		Set loop out point

Table 2 – continued from previous page

# User Manual	Control	Modifier	Context	Function
		SHIFT		Delete loop out point
7	AUTO LOOP	NONE	Loop is undefined	Activate a loop over beatloop size beats
		SHIFT	Loop is undefined	Activate a rolling loop over beatloop size beats
		NONE	Loop is defined	Toggle reloop
		SHIFT	Loop is defined	Delete loop
7	LOOP +	NONE		Double beatloop size beats
		SHIFT		Move loop forward by beatloop size beats

		SHIFT		Enable solo cue mix (only this channel)
36	VU METER DISP. SWITCH			Select channel(s) for display
37	CHANNEL FADER			Control channel output volume
38	CROSS FADER			Control balance between assigned channels
39	VU METER			Display channel/main output volume
40	BOOTH ASSIGN			Select source for booth output
41	BOOTH LEVEL			Control booth output volume
42	MASTER LEVEL			Control main output volume
43	HI KNOB			Control channel EQ (high freq.)
43	MID KNOB			Control channel EQ (mid. freq.)
43	LOW KNOB			Control channel EQ (low freq.)
44	LEVEL KNOB			Control channel gain
45	CHANNEL INPUT SELECT			Select channel input source

17.1.19 Denon MC7000

The Denon MC7000 is a professional DJ controller which has got 4-channel capability and dual USB connections. These two USB audio interfaces enable two DJs to play together. This controller includes Denon's high build quality and superior 24-bit audio reproduction, makes this suited to both mobile and club DJs.

New in version 2.2.4.

Changed in version 2.3.0: Fixed a vinyl mode bug on deck 4 and added new features, like library sorting, searching through track with jog wheel, ejecting track from deck, waveform zoom, fixed loops and an experimental beat counter (slicer-like) and improved parameter and censor/reverse/spinback button mappings.

Changed in version 2.3.1: Some improvements for slip mode, sampler play and rate range toggle. Added browsing through library using jog wheel.

Useful links

- Denon MC7000 Mapping thread
- Manufacturer's product page
- User Guide
- Hardware Setting Specification
- Mixxx showcase on YouTube

Compatibility

- **Mac** users should be just fine connecting the MC7000 and go.

- **Windows** users need to install the latest Windows Driver from Denon Download Site.

- **Linux** users need a minimum LTS Kernel version **4.19.105** or **5.4.21**. All Kernels **5.6.x** and following are supporting the device out-of-the-box.

Mapping
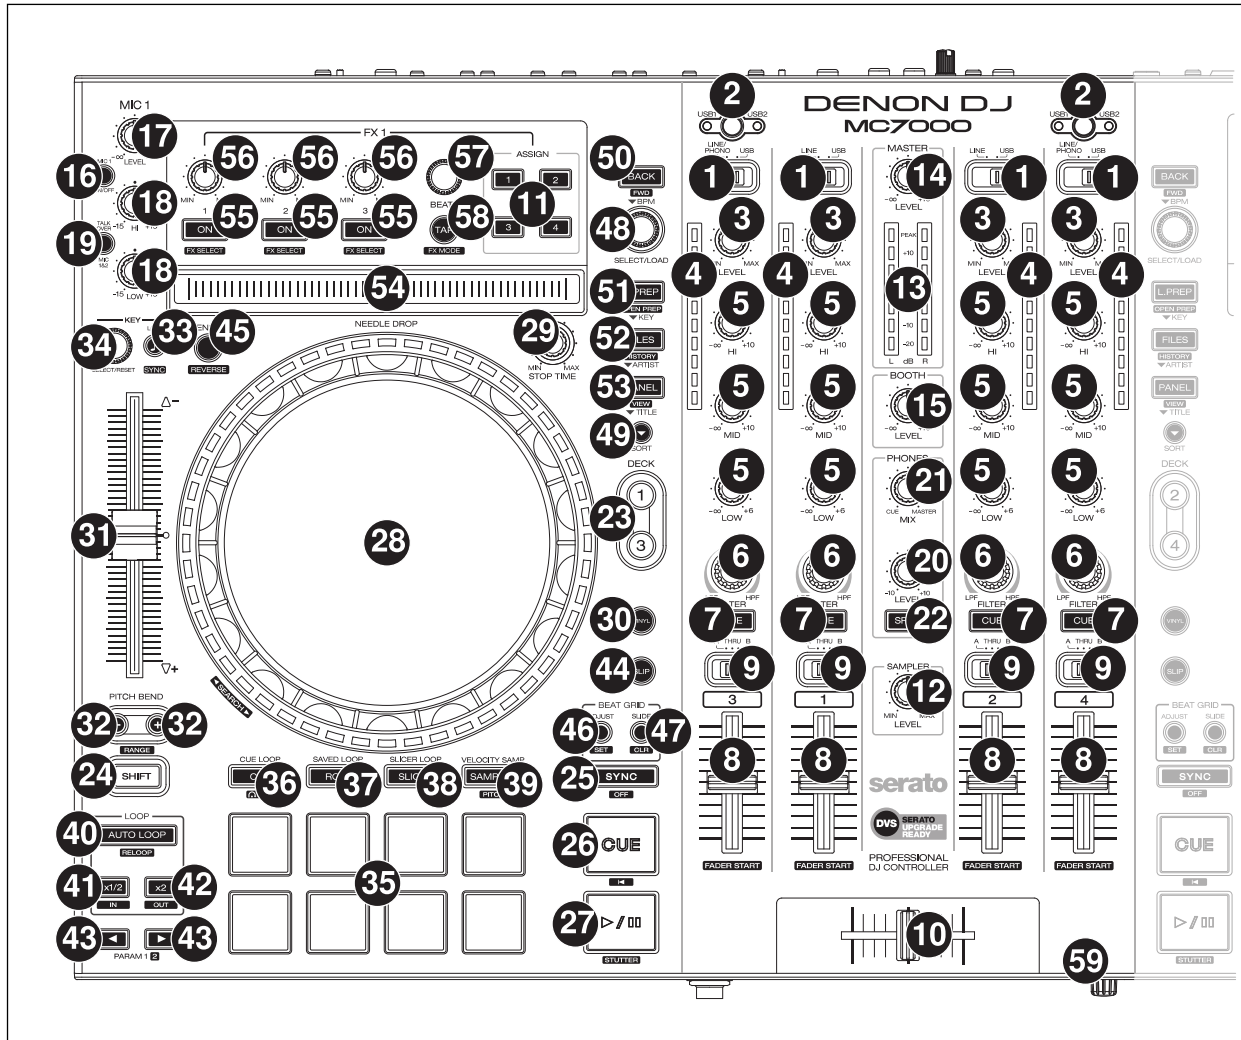

Fig. 12: Denon MC7000 (schematic view)

This controller is made for Serato DJ and most of the mapping is made for Mixxx accordingly. Anyhow, there are several differences for functions not matching the Serato mapping. If you have any wishes to improve the mapping, then please discuss it in the Denon MC7000 Mapping thread.

User Variables

User variables can be set to suit individual needs inside the `Denon-MC7000-scripts.js` mapping file:

- `MC7000.experimental` activate *experimental beat count feature* (default: `false`)
- `MC7000.needleSearchPlay` activate NEEDLE DROP sensor while a track is playing (default: `false`)
- `MC7000.prevSamplerStop` set to single play samplers (default: `true`)
- `MC7000.rateRanges` set the available Pitch Fader ranges (default: 4, 6, 8, 10, 16, 24, 50, 90)
- `MC7000.modeSingleLED` set single LED on or off (default: 1). Can be toggled with SHIFT + Deck
- `MC7000.VinylModeOn` set the Vinyl Mode on or off at Mixxx start which also triggers the Platter Ring LED function (default: 1)
- `MC7000.scratchParams` set Scratch Parameters (default: 33+1/3, 1/10, 1/10/32)
- `MC7000.jogSensitivity` set the Jog Sensitivity (default: 1)
- `MC7000.SamplerQty` set the sampler quantity (values 16 or 32, default: 16)

Mixer Section

No.	Control	Function
1	Input Selector Switch	Set to the desired audio source for this channel. LINE/PHONO will disable the corresponding Deck (switches off all LEDs and the controller will not send MIDI signals to control Mixxx). This allows the mixer to use an external source. USB will turn the corresponding Deck on and allows to control Mixxx via USB connection.
2	USB1 / USB2	Press to select whether the deck is controlling the computer connected to USB Port 1 or USB Port 2. If only one USB Port is connected the controller activates this automatically.
3	LEVEL	Turn to adjust the level of the pre-fader, pre-EQ audio signal for the channel.
4	Channel Level Meters	Display the audio signal level of the channel as in Mixxx GUI.
5	Channel EQ	Turn to boost or cut the HI, MID and LOW frequencies for the channel.
6	FILTER	Turn this knob to adjust the filter applied to the channel. Turn the knob counter-clockwise to apply a low-pass filter. Turn the knob clockwise to apply a high-pass Filter.
7	CUE	Press to send the channel's pre-fader signal to the headphones' cue channel.
8	Channel fader	Use to adjust the channel's volume level.
9	Crossfader Assign	Routes the audio playing on the corresponding channel to either side of the crossfader (A or B), or bypasses the crossfader and sends the audio directly to the program mix (THRU).
10	Crossfader	Use this crossfader to mix between the left and right decks.
12	SAMPLER LEVEL	Turn this knob to adjust the volume level of the software's sampler. If the volume is set to 0 then the Sampler banks are hidden, otherwise shown.
13	Main Level Meters	These LEDs show the Main Audio signal.
14	MASTER LEVEL	Turn to adjust the volume level of the main outputs.
15	BOOTH LEVEL	Turn to adjust the volume level of the booth outputs.
20	PHONES LEVEL	Turn to adjust the volume level of the headphones.
21	PHONES MIX	Adjusts the software's audio output to the headphones, mixing between the cue output and the main mix output.
22	SPLIT	Press to switch Headphone 'split' mode. When this switch is lit, the headphone audio will be 'split' such that all channels sent to cue channel are summed to mono and sent to the left headphone channel and the main mix is summed to mono and sent to the right channel. When the switch is unlit, the cue channel and main mix will be 'blended' together.
59	X FADER CONTOUR	Turn to adjust the slope of the crossfader curve, to the left for a smooth fade (mixing) or to the right for a sharp cut (scratching.

Note: The Input source selection, Main Level Meters, USB1 / USB2, MASTER LEVEL, BOOTH LEVEL, PHONES LEVEL, PHONES MIX and SPLIT are handled by the controller. The status of Mixxx will not be changed.

Microphone Section

No.	Control	Function
16	MIC ON/OFF	Press to activate/deactivate the microphones.
17	MIC LEVEL	Turn to adjust the volume levels of the corresponding microphone inputs.
18	MIC 1 HI/MIC 1 LOW (left deck)	Turn to boost or cut the high or low frequencies for Microphone 1.
18	MIC 2 TONE (right deck)	Turn to adjust the tone (high-low) for Microphone 2.
18	ECHO MIC 1&2 (right deck)	Turn to adjust the amount of the echo effect for both Microphones.
19	TALKOVER MIC 1&2 (left deck)	Press to use the 'talkover' feature, which automatically reduces the volume level of the main mix when you speak into the microphones.
19	SHIFT + TALKOVER MIC 1&2 (left deck)	Press to activate/deactivate the 'Post' feature. When on, the microphones signal will be sent to the Booth Outputs. When off, the microphones signal will not be routed to the Booth Outputs.
19	ECHO MIC 1&2 (right deck)	Press this button to activate or deactivate the echo effect on the microphones' audio signal.

Note: All functions are handled by the controller in hardware. The status of Mixxx will not be changed.

FX Section

No	Control	Function
11	FX ASSIGN	Press assign FX 1 and/or FX 2 to the corresponding channel.
55	FX ON	Press to turn the corresponding effect on or off.
55	SHIFT + FX ON	Press to select an effect from the list that was enabled in the Mixxx Preferences FX section.
56	FX 1, FX 2, FX 3	Turn to adjust the level of the corresponding effect. The FX ON button under the knob must be lit for this knob to function.
57	FX BEATS	Turn to adjust the Wet/Dry rate of the effects.
58	FX TAP	Press to activate effects for the Main output. This can be overlapped with Channel Effects.
58	SHIFT + FX TAP	Press to activate effects for headphones cue.

Library Section

No.	Control	Function
48	SELECT/LOAD	Turn to navigate through lists. Press the left side button to load a track into the active Deck (1 or 3), press the right side button to load a track into the active Deck (2 or 4). When you keep the knob pressed down longer than 0,5 sec an actual loaded track will be ejected from the deck upon release of the knob.
48	SHIFT + SELECT/LOAD	Turn to browse quickly through the tracks in the library or push the knob to open folders on the left side of the library.
49	SORT	Press and hold to activate sort functions.
50	BACK	Press to switch between right and left side of the library.
50	SHIFT + BACK	Press to move through frames inside the GUI.
50	SORT + BACK	Press to sort the tracks by Beats Per Minute.
51	L.PREP	Press to load the currently selected track to the Preview Deck.
51	SHIFT + L.PREP	Press to start and stop playing the track in Preview Deck.
51	SORT + L.PREP	Press to sort the tracks by their Key.
52	FILES	Press to maximize the library. Press this button again to exit maximized library. While the library is maximized you can use the jog wheel to navigate quickly through lists.
52	SORT + FILES	Press to sort the tracks by Artist.
53	PANEL	Press to open and close the FX panel inside the GUI.
53	SORT + PANEL	Press to sort the tracks by Title.

Deck Section

No.	Control	Function
23	DECK	Selects which deck in the software is controlled by that hardware deck. The left deck can control Deck 1 or 3; the right deck can control Deck 1 or 4.
23	SHIFT + DECK	Press to switch Platter Ring LED Mode. Refer to the *LEDs section* for details.
24	SHIFT	Press and hold this button to access secondary functions of other controls.
25	SYNC	Press to automatically match the corresponding deck's *tempo* with the tempo and phase of the opposite deck. Press again to deactivate Sync. Hold this button down for one sec to permanently match the tempo.
26	CUE	If a cue point is not set then press this button to set it at the current track position. During playback, press this button to return the track to the cue point. If the deck is paused, press and hold this button to play the track from the cue point. Release the button to return the track to the cue point and pause it. To continue playback without returning to the cue point, press and hold this button and then press the PLAY button, afterwards release cue button.
26	SHIFT + CUE	Press to return to the start of the track.
27	PLAY / PAUSE	Press to pause or resume playback. Start/Stop time can be adjusted with stop time knob.
27	SHIFT + PLAY / PAUSE	Press to stutter play the track from the last set cue point.

Table 3 – continued from previous page

No	Control	Function
28	Jog Wheel	Controls the audio playhead when the wheel is touched and moved. When the VINYL button is lit, move the platter to 'scratch' the track as you would with a vinyl record. When the VINYL button is unlit (or if you are touching only the side of the platter), move the platter to temporarily adjust the track's speed. If the library is maximized (use FILES button) turning the jog wheel will scroll the current table view (currently playing track is not affected). Be careful though: after exiting the maximized library view the jog wheel will immediately return to jog or scratch mode.
28	SHIFT + Jog Wheel	Navigates quickly through the track. This only applies if touching the side of the platter or with VINYL deactivated.
29	STOP TIME	Controls the rate at which the track slows to a complete stop ('brake time') during backspin. This also affects how quickly the track starts after a backspin ('Soft Start').
30	VINYL	Press to activate/deactivate a 'vinyl mode' for the platter. When activated, you can use the platter to 'scratch' the track as you would with a vinyl record.
31	Pitch Fader	Move to adjust the speed (pitch) of the track.
32	PITCH BEND –/+	Press to momentarily reduce or increase the speed of the track.
32	SHIFT + PITCH BEND –/+	Press to set the Pitch Fader range. You may adjust the steps in *JavaScript file*
33	KEY LOCK	Press to activate/deactivate Key Lock. When Key Lock is activated, the track's key will remain the same even if you adjust its speed.
33	SHIFT + KEY LOCK	Press to automatically match the corresponding deck's key with the key of the opposite deck.
34	KEY SELECT/RESET	Turn to raise or lower the key of the track. Press to reset the track's key to its original key.
34	SHIFT + KEY SELECT/RESET	Turn to zoom in and out the waveform or push the knob to reset the Waveform zoom to the level set in preferences.
35	Performance Pads	refer to the *Performance Pads section* for details.
40	AUTO LOOP	Press to create an auto-loop with the length set with loop length. You may change the length of beats by using the X1/2 or X2 buttons.
40	SHIFT + AUTO LOOP	Press to toggle the current loop on or off. If the loop is ahead of the current play position, the track will keep playing normally until it reaches the loop.
41	X1/2	Press to halve the length of the current loop.
41	SHIFT + X1/2	Press to create a loop in point at the current Location.
42	X2	Press to double the length of the current loop.
42	SHIFT + X2	Press to create a loop out point at the current Location.
43	</> PARAM 1 2	Press to add/remove rating stars to the loaded track.
43	SHIFT + </> PARAM 1 2	Press to change the track color in the library.
44	SLIP	Press to enable or disable Slip Mode. In Slip Mode, you can jump to cue points, trigger loops or use the platters, while the track's timeline continues. In other words, when you deactivate Slip Mode, the track will resume normal playback from where it would have been if you had never done anything (i.e., as if the track had been playing forward the whole time). After scratch, hot cue play, reverse play and backspin the slip mode releases itself so the timeline of the track jumps back to original position after the action is done. Slip mode reactivates itself after 50ms so you can continue with more actions in slip mode almost immediately after.

Table 3 – continued from previous page

No	Control	Function
45	CENSOR	Press and hold this button to play the track in REVERSE. When releasing the button, the track immediately starts playing from it's momentary position. If SLIP was active then after releasing the CENSOR button the track continues as it had been playing forward the whole time (CENSOR). Slip mode stays enabled so you can continue with more actions in slip mode.
45	SHIFT + CENSOR	Press to activate a backspin with the length set by the STOP TIME knob. If SLIP was active then after releasing the CENSOR button the track continues as it had been playing forward the whole time. Slip mode stays enabled so you can continue with more actions in slip mode.
46	BEAT GRID ADJUST	Press to adjust the Beat Grid to the current play position.
46	SHIFT + BEAT GRID ADJUST	Press to activate Quantize mode.
47	BEAT GRID SLIDE	Press to adjust the Beat Grid to another playing track.
54	NEEDLE DROP	Place your finger on a point along this sensor to jump to that point in the track (strip represents entire track).
54	SHIFT + NEEDLE DROP	Press to jump to a position while a track is currently playing.

Hint: The jog sensitivity and scratch parameters (28), the default vinyl mode (30), the pitch fader ranges (32) as well as the needle drop activity (54) can be set by modifying the variables inside the *JavaScript file* accordingly.

Note: Use SHIFT + CENSOR for a backspin while SLIP is active. Backspin using the platter is only possible while SLIP is disabled.

Performance Pads

Mode Selection

No	Control	Function
35	Performance Pads	Press to perform action with one of those buttons.
36	CUE	Press to switch to **'Hot Cue'** mode.
37	ROLL	Press to switch to **'Roll'** mode.
37	SAVED LOOP	Press ROLL one more time to get into **'Fixed Loop'** mode.
38	SLICER	Press to switch to **'Beatjump'** mode.
39	SAMPLER	Press to switch to **'Sampler'** mode.
39	VELSAMPLER	Press to switch to **'VelocitySampler'** mode.
39	PITCHPLAY	Press with shift to switch to **'Pitch Play'** mode.

Hot Cue Mode (blue LED)

8 Hot Cue positions can be defined in this mode.

Press one of the pad buttons to set or play a Hot Cue.

Use SHIFT + pad button to delete an existing Hot Cue.

If SLIP is active then press and hold a pad button to play from the Hot Cue position. After releasing the Hot Cue button the track continues as it had been playing forward the whole time. Slip mode stays enabled so you can continue with more actions in slip mode.

CUE LOOP	SAVED LOOP	SLICER LOOP	VELOCITY SAMP.
CUE	ROLL	SLICER	SAMPLER
FLIP			PITCH
Hot Cue 1	**Hot Cue 2**	**Hot Cue 3**	**Hot Cue 4**
Hot Cue 5	**Hot Cue 6**	**Hot Cue 7**	**Hot Cue 8**
Roll Mode (turquoise LED)

This mode lets you repeat a number of beats while keep pushing a pad button down.

The SLIP function remains active so that the track continues at the position where it had been playing forward the whole time.

CUE LOOP   SAVED LOOP   SLICER LOOP   VELOCITY SAMP.

| CUE | ROLL | SLICER | SAMPLER |

FLIP   PITCH

| 1/16 beat Loop Roll | 1/8 beat Loop Roll | 1/4 beat Loop Roll | 1/2 beat Loop Roll |

| 1 beat Loop Roll | 2 beat Loop Roll | 4 beat Loop Roll | 8 beat Loop Roll |

Fixed Loop Mode (yellow LED)

This mode lets you set a dedicated loop from current position.
Another push on the pad button will turn the loop off.
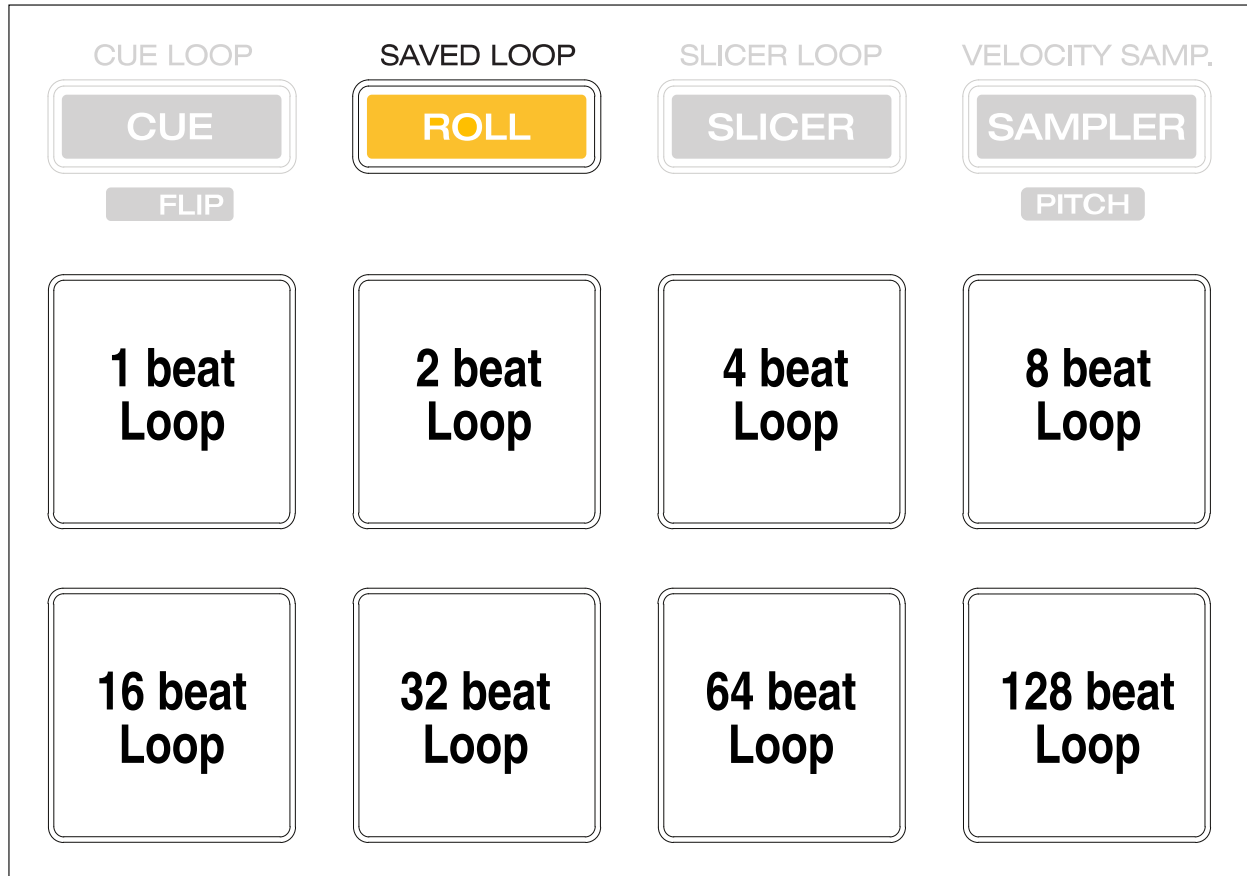

Beatjump Mode (red LED)

This mode lets you jump a number of beats while pushing a pad button once.

Press and hold "SHIFT" and then push a pad button to jump even more beats.
16, 32, 64 and 128 forward on the upper row and backwards on the lower row.

Hint: If experimental features were set to *true* in the *JavaScript file* then the pad LEDs counting the beat **after** the main CUE point.

CUE LOOP	SAVED LOOP	SLICER LOOP	VELOCITY SAMP.
CUE	ROLL	SLICER	SAMPLER
FLIP			PITCH
Jump fwd 1 beat	Jump fwd 2 beats	Jump fwd 4 beats	Jump fwd 8 beats
Jump back 1 beat	Jump back 2 beats	Jump back 4 beats	Jump back 8 beats

Sampler Mode (pink LED)

As default 16 samplers can be used. 8 samplers can be triggered from Deck 1 and Deck 3 and 8 samplers can be triggered from Deck 2 and Deck 4. Deck 1 will play sampler 1 to 8, Deck 2 will play sampler 9 to 16, Deck 3 will play sampler 1 to 8 and Deck 4 will play sampler 9 to 16.

Add samplers to the sampler bank pushing a pad button.

If a sampler is loaded, then another push on the pad button will play the sampler from its Cue point.

Push the pad button again while playing will replay the sampler from Cue point.

When a sampler is started while another one is still playing, then the initial sampler stops and only the newly triggered sampler plays (single play).

Use SHIFT + pad button to stop a sampler while playing or eject a sampler when stopped.

Hint: To use default Mixxx behaviour and allow playing multiple samplers at the same time you can set the user variable `MC7000.prevSamplerStop` inside the *JavaScript file* to `false`.

Velocity Sampler Mode (purple LED)

Velocity Sampler Mode is a mode where the velocity of the push on the pad determines the volume of the sampler played. A gentle push results in low volume and a powerful push restults in high volume. Apart from that the behavior is equal to Sampler Mode.

As default 16 samplers can be used. 8 samplers can be triggered from Deck 1 and Deck 3 and 8 samplers can be triggered from Deck 2 and Deck 4. Deck 1 will play sampler 1 to 8, Deck 2 will play sampler 9 to 16, Deck 3 will play sampler 1 to 8 and Deck 4 will play sampler 9 to 16.

Add samplers to the sampler bank pushing a pad button.

If a sampler is loaded, then another push on the pad button will play the sampler from its Cue point.

Push the pad button again while playing will replay the sampler from Cue point.

When a sampler is started while another one is still playing, then the initial sampler stops and only the newly triggered sampler plays (single play).

Use SHIFT + pad button to stop a sampler while playing or eject a sampler when stopped.

CUE LOOP	SAVED LOOP	SLICER LOOP	VELOCITY SAMP.
CUE	ROLL	SLICER	SAMPLER
FLIP			PITCH
Sample 1	Sample 2	Sample 3	Sample 4
Sample 5	Sample 6	Sample 7	Sample 8

Hint: To use default Mixxx behaviour and allow playing multiple samplers at the same time you can set the user variable `MC7000.prevSamplerStop` inside the *JavaScript file* to `false`.

Pitch Play Mode (green LED)

Pitch Play Mode is a mode where the pad position determines the pitch of the deck played. After activating the Pitch, the pads light up in hotcue colors, waiting for a selection of existing hotcue for Pitch Play or creating a new hotcue at the current position. When a hotcue has been selected or created, this hotcue is used for Pitch Play.

During Pitch Play the range of pitch can be changed up or down using the param buttons.

start Pitch Play pushing a pad button after hotcue selection.
If the deck is playing, then another push on the pad button will start to play the deck with the assigned pitch from its Cue point.
To reset pitch press shift and pad button.
LEDs

The Channel Volume Meters matches to the ones shown in Mixxx GUI. Only when clipping the red LED illuminates.

The MASTER LEVEL meter is not correlated to Mixxx GUI as the controller handles that in Hardware.

Button LEDs are fully mapped for the first function. As you press and hold SHIFT then the secondary functions have only got some flashing LEDs mapped, e.g. TAP and KEY SYNC, when activated.

Press SHIFT + Deck to switch Platter Ring LED Mode.

- Mode 0 - Single 'off' LED chase (all other LEDs are 'on')

- Mode 1 - Single 'on' LED chase (all other LEDs are 'off')

Hint: The default mode can be set to `0` or `1` inside the *JavaScript file*.

Platter Ring LEDs are correlated with the VINYL button.

- If vinyl mode is enabled, the LED imitates a turntable platter spinning at 33.3 rpm.

- If vinyl mode is disabled, the current track position is indicated by the Platter LEDs starting at the top.

Note: The Platter Ring LEDs are not moving while the track position is 'negative'. That means if the position is before the track starts then the position LED keeps staying at most up position.

Known Issues

- Some Performance Pad modes are not available (Cue Loop, Flip, Slicer Loop).

- The Effect Units don't use Mixxx' Standard Effects Mapping

17.1.20 DJ Tech CDJ 101

DJ Tech is not to be confused with DJ TechTools, the makers of the MIDI Fighter series, Chroma Cables, and Chroma Caps. There is no (longer) a product page for this discontinued device.

- Forum thread

New in version 1.11.

Mapping description

Needs the CDJ 101 to be on midi channel 1 for deck 1 and on channel 2 for deck 2.

- Pitch slider works as you'd expect

- Holding down the push button works as a "shift" to activate secondary functions

- Rotate push button: navigate tracks

- Shift + rotate push button: switch between playlists

- Cue button: default cue behaviour

- Play: toggle play

- Shift + play: sync

While track is playing

- Surface of jog wheel: scratch

- Edge of jog wheel: tempo bend

- Shift + edge of jog wheel: fine tempo bend

While deck is paused

- Press push button: load a track

- Surface of jog wheel: scratch thru track

- Shift + surface of jog wheel: scan through track quickly

- Edge of jog wheel: jog though track slowly

- Shift + Cue: move beatgrid

17.1.21 DJ Tech DJM 101

DJ Tech is not to be confused with DJ TechTools, the makers of the MIDI Fighter series, Chroma Cables, and Chroma Caps. There is no (longer) a product page for this discontinued device.

- Forum thread

New in version 1.11.

Note: Unfortunately a detailed description of this controller mapping is still missing. If you own this controller, please consider contributing one.

17.1.22 DJ Tech iMix Reload

DJ Tech is not to be confused with DJ TechTools, the makers of the MIDI Fighter series, Chroma Cables, and Chroma Caps. There is no (longer) a product page for this discontinued device.

- Forum thread

New in version 1.10.

Note: Unfortunately a detailed description of this controller mapping is still missing. If you own this controller, please consider contributing one.

17.1.23 DJ Tech Kontrol One

DJ Tech is not to be confused with DJ TechTools, the makers of the MIDI Fighter series, Chroma Cables, and Chroma Caps. There is no (longer) a product page for this discontinued device.

- Forum thread

New in version 1.11.

Note: Unfortunately a detailed description of this controller mapping is still missing. If you own this controller, please consider contributing one.

17.1.24 DJ-Tech MIX-101

New in version 2.0.

Note: Unfortunately a detailed description of this controller mapping is still missing. If you own this controller, please consider contributing one.

17.1.25 DJ Tech Mixer One

DJ Tech is not to be confused with DJ TechTools, the makers of the MIDI Fighter series, Chroma Cables, and Chroma Caps.

- Manufacturer's product page

New in version 1.10.1.

Note: Unfortunately a detailed description of this controller mapping is still missing. If you own this controller, please consider contributing one.

17.1.26 DJ TechTools MIDI Fighter Classic

A simple 16 button controller that has been discontinued.

The default Mixxx mapping has the buttons mapped to hotcues 1-8 for decks 1 & 2.

New in version 1.8.

Note: Unfortunately a detailed description of this controller mapping is still missing. If you own this controller, please consider contributing one.

17.1.27 DJ TechTools MIDI Fighter Twister

- Manufacturer's product page

New in version 2.1.5.

Note: Unfortunately a detailed description of this controller mapping is still missing. If you own this controller, please consider contributing one.

17.1.28 EKS Otus

This controller has been discontinued as EKS is went out of business.

New in version 1.11.

Note: Unfortunately a detailed description of this controller mapping is still missing. If you own this controller, please consider contributing one.

17.1.29 Electrix Tweaker

The Electrix Tweaker is an unconventional MIDI controller that can control most aspects of Mixxx. Instead of jog wheels, it fits an 8x4 grid of multicolor backlit buttons, 8 velocity-sensitive buttons, and 6 push encoders with LED rings into a relatively small package. It does not have a built in sound card, so it requires a separate sound card or splitter cable (although it does include 5-pin MIDI in and out ports).

- Manufacturer's website
- Forum topic
- Manufacturer's manual

New in version 2.0.

Compatibility and setup

The Tweaker is a USB MIDI class compliant device, so it does not require any special drivers on any operating system. Just plug it in and load the Mixxx mapping on any OS that Mixxx runs on.

Use it with the Tweaker MIDI 1 port (Tweaker MIDI 2 is the 5-pin MIDI I/O on the Tweaker).

Mapping description

Global controls

1. Scroll through library. Press to toggle big library view
2. Scroll up left panel of library
3. Scroll down left panel of library
4. Samplers

- Off when empty, red when loaded
Fig. 13: Electrix Tweaker (global controls)

- Press a button to load the selected sample into a sampler and play it

- Press a button to play a sample. When the button is released, the sample will stop playing.

- Press [[#top-shift-layer|top shift]] and a sampler button to eject a sample from a sampler

- Samples will play with their volume proportional to how much force was used to strike the button. You can adjust the sensitivity or disable the velocity sensitivity (and make them work as on/off switches) by adjusting options at the top of the JavaScript file in a text editor.

5. Crossfader

Top shift layer
Fig. 14: Electrix Tweaker (top shift layer controls)

This layer is active while the top shift button (#1 in the diagram) is held down.

With the exception of the headphone mix encoder (#8 in the diagram), pressing the encoders 7-12 resets them to center.

1. Top shift button

2. Eject left deck

3. Eject right deck

4. Expand/collapse selected item in left library pane

5. Expand/collapse selected item in left library pane

6. Scroll through library quickly. Push to load selected track into first stopped deck.

7. Headphone gain

8. Headphone cue/main mix in headphones. Press to toggle split cue mode. The blue LED below encoder is lit when split cue mode is enabled.

9. Channel gain for active deck on left side

10. Main output gain

11. Main output balance

12. Channel gain for active deck on right side

13. Eject sampler

14. Delete hotcue

15. Deck shift button. Press to enable [[#vinyl timecode mode]] on the deck that is active on the left side (press top shift button first, then this button while holding down top shift)

16. Deck shift button. Press to enable [[#vinyl timecode mode]] on the deck that is active on the right side (press top shift button first, then this button while holding down top shift)

Deck controls

The deck controls are the same on each half of the controller. Which deck each side controls can be switched with the deck toggle button, labeled #11 in the diagram. When controlling deck 1 or 2, the switches on that side (9, 11, 13, 14, and 15 in the diagram) are blue when enabled, as shown on the left side of the diagram. When controlling deck 3 or 4, the switches on that side are magenta when enabled, as shown on the right side of the diagram.

1. Filter (low pass filter left of center; high pass filter right of center)

2. Load track selected in library into deck

3. Toggle encoders between EQ and loop mode (see [[#channel-encoder-layers|below]])

4. Headphone cueing

5. Volume

6. Play/pause

7. Hotcues. Press an unlit button to set a hotcue. When slip mode is disabled (see #9 below), pressing a hotcue simply jumps to that hotcue. When slip mode is on, hotcues can be previewed on a stopped deck. While previewing a hotcue, press the play button to let the track keep playing after the hotcue is released. Pressing a hotcue while a deck is playing and slip mode is on will jump to the hotcue then jump back to where the track would have been once the last hotcue button is released.

8. Jump 4 beats forward (with quantize enabled)

9. Slip mode. When active, loops and hotcues will only play as long as they are held down. When they are released, the track will jump to where it would have been if the loop or hotcue was not pressed.

10. [[#deck-shift-layer|Deck shift]]

11. Deck toggle between decks 1 & 3 on the left and decks 2 & 4 on the right.

12. Jump 4 beats backward (with quantize enabled)
Fig. 15: Electrix Tweaker (deck controls)

13. Quantize. In addition to snapping cues, loops, and play button presses to the nearest beat, this changes the behavior of the controller's navigation buttons. When enabled, the navigation buttons are white as shown by 8 & 11 in the diagram. With quantize enabled, the navigation buttons jump by 4 beats or 1 beat with [[#deck-shift-layer|deck shift (#10)]] pressed. When disabled, the navigation buttons are green as shown by 15 & 16 in the diagram. With quantize disabled, the navigation buttons fast forward and rewind the track. When quantize is disabled and deck shift is pressed, the navigation buttons are temporary pitch bend buttons.

14. Key lock

15. Sync lock

16. Fast forward (with quantize disabled)

17. Rewind (with quantize disabled)

Deck Shift layer
Fig. 16: Electrix Tweaker (deck shift layer)

This layer is active while the yellow deck shift button on that side of the controller is held down.

1. Pitch (only adjusts tempo with keylock on)

2. Jump 32 beats forward or backward

3. Scroll through hotcue pages. The pages are color coded, in order, cyan, green, red, and white. The LED around the encoder indicates the hotcue page number. The active page on a deck is remembered when toggling between decks (see [[#deck-controls|deck controls (#11)]] above).

4. Exit loop

5. Volume

6. Cue. When previewing from the cue point on a stopped deck, release this cue button to stop playing and jump back to the cue point. Release deck shift to continue playing.

7. Move hotcue to current position

8. Jump forward 1 beat (with quantize enabled, see [[#deck-controls|deck controls #13]])

9. Manually place loop start point

10. Deck shift button

11. Manually place loop end point

12. Jump back 1 beat (with quantize enabled, see [[#deck-controls|deck controls #13]])

13. Align beatgrid with current position

14. Sync key. If key has been changed from track's original key, reset the key.

15. Reset tempo

16. Temporarily raise pitch while pressed (with quantize disabled, see [[#deck-controls|deck controls #13]])

17. Temporarily lower pitch while pressed (with quantize disabled, see [[#deck-controls|deck controls #13]])

Channel encoder layers

The encoder layer buttons (#4 and #8 in the diagram) toggle the encoders between EQ and loop layers.

The left side of the diagram shows EQ mode. In EQ mode, pressing encoders toggles that EQ's kill switch. The blue LED below the encoder is lit while the kill switch is on. Pressing the encoder while holding deck shift (see *deck controls #10*) resets the EQ to center.

Tip: You can go to Options > Preferences > Equalizers and check "Reset equalizers on track load". On most controllers, this would be an issue because the physical knobs would be misaligned with the values in software when the EQs were reset, but because the Tweaker has LED rings around encoders instead of knobs, this is not an issue.

The right side of the diagram shows loop mode. The LEDs on the loop move length and loop length encoders represent numbers of beats. Center means 1 beat. Each step to the right doubles the beats and each step to the left halves the beats. For example, the default loop length is 4 beats, so the center LED and 2 LEDs to the right are lit (2 x 2 = 4).

1. High EQ

2. Mid EQ

3. Low EQ

4. Encoder mode button. Press to switch to loop mode.

5. Loop move length

6. Move loop

7. Loop length. Press to toggle loop. When in slip mode (see [[#deck-controls|deck control button #9]]), the loop is only active while this is held down. The blue LED below the encoder is lit while

8. a loop is active.
Fig. 17: Electrix Tweaker (channel encoder layers)

9. Encoder mode button. Press to switch to EQ mode.

Vinyl Timecode Mode
Fig. 18: Electrix Tweaker (vinyl timecode mode)

1. Top Shift

2. Toggle vinyl timecode mode by pressing deck shift (#2 in the diagram) while holding top shift (#1 in the the diagram). This replaces the navigation buttons for that deck with buttons that toggle options for timecode control.

3. Cycle through vinyl control modes: absolute (LED off), relative (LED indicates cue mode), and constant (LED red). If the deck is in relative mode and playing, pressing the button cycles through cue modes: off (white), cue (yellow), hotcue (green). When the deck is playing in relative mode, pressing the button with deck shift (#2) switches to constant mode.

4. toggle vinyl control. Turns green when vinyl control is enabled. With deck shift (#2) pressed, it toggles passthrough mode and turns white. Pressing the button while passthrough mode is enabled turns passthrough mode off (without toggling whether vinyl control is enabled).

17.1.30 Evolution X-Session

This product has been discontinued.

New in version 1.6.

Note: Unfortunately a detailed description of this controller mapping is still missing. If you own this controller, please consider contributing one.

17.1.31 FaderFox DJ2

- Manufacturer's product page

New in version 1.6.

Setting up the controller

In order for this mapping to work, you will need to use these settings. First, enter *System Mode* by pressing the two black buttons in the top right encoder section. There is a vertical *System* label next to these two buttons. The orange *Sys/Mon* LED in the center bottom should be on and not blinking.

You can now modify various settings by pressing each of the 4 black buttons of the encoder section. There are two possible settings for each function, *On* or *Off*, depending which of the corresponding LED is lit. There is also a brief explanation of these settings on a gray sticker in the back of the controller.

- The top left button controls the *Auto Switch* function. If the *Seek/Scratch* green LED, is on, the function is off. If the *List/load* red LED is on, the function is on. If the *Auto Switch* function is on, the encoder will switch to *Seek/Scratch* after pressing the encoder to load a track. This function is up to the user's preference and will not affect the mapping.

- **The bottom left button must be set to the Gain green LED for this mapping to work**. If set to the red *Pitch* LED, the transport buttons will have different CC numbers. This is useful if you own a second controller which already has transport functions.

- **The top right button must be set to the Seek/Scratch green LED.** If set to the *List/Load* red LED, the *Auto Play* function will be on, meaning that loading a track from the *List/load* encoder will trigger playback. You don't want this function on since it will conflict with the play button of the transport section which would have the same CC number.

- **The bottom right button must be set to the Gain green LED.** If set to the red LED, the joystick will have different CC numbers, and its mapping won't work properly.

- If the green *FX1* LED is on, the controller's will use MIDI channel 1, and channel 16 if the *FX2* LED is on. This is useful if you want to control four decks using two FaderFox DJ2 controllers. If you use only one controller, leave this setting to *FX1*. To change the setting, press the *Shift* button and the lower left black button of the encoder section for channel 1, or the lower right black button of the encoder section for channel 16.

Important : changes to your settings won't be saved if you just turn off the controller on *System Mode*. To save the settings, exit *System Mode* by pressing again the two black buttons of the left encoder section.

Encoders Section

The two encoders on top of the controller control various parameters. They can of course be turned but also act as push buttons. You can select which function is used for each of the encoders by pushing the black buttons of the encoders section. LEDs indicate which function is currently selected.

- *List/Load* (top red LED is on) lets you browse your playlist. Push the left encoder to load the highlighted track into Deck A or the right encoder for Deck B.

- *Seek/Scratch* (top green LED is on) acts as a jogwheel. Turn the left encoder for Deck A or the right encoder for Deck B. Pushing the encoder on that setting will activate *Sync* on that deck.

- *Gain* (bottom green LED is on) controls the gain of the channel. Pushing the encoder on that setting will mute the track.

- *Pitch* (bottom red LED is on) controls the tempo of the deck. Unfortunately there is no MIDI CC number emitted when pushing the encoder on that position.

Joystick

The joystick can be set to control either the first or the second unit of the effect rack. To control the first effect unit, press *Shift* + the lower black button of the left encoder section (*FX1* green LED is on). To control the second effect unit, press *Shift* + the lower black button of the right encoder section (*FX2* green LED is on).

The horizontal axis of the joystick controls the *Mix* knob of the effect unit. The vertical axis control the *Super Knob* of the unit.

Mixer Section

- Using the knobs and faders should be straightforward as the controls follow the labels printed on the controller.

- The *Cue Mix* knob controls the headphone mix. The *Cue A* and *Cue B* are used to pre-listen the selected deck.

- The green *FX ctrl* buttons are used to activate a desired effect unit on the selected deck.

- the left green button enables effect unit 1 on that deck

- the right green button enables effect unit 2 on that deck

- *Shift* + left green button enables effect unit 3 on that deck

- *Shift* + right green button enables fx unit 4 on that deck

- The *Kill* button controls Low Kill and *Shift + Kill* controls High Kill. To use Mid Kill, press *Shift + Cue A* (Deck A) or *Shift + Cue B* (Deck B)

Transport Section

The left transport section controls Deck A transport functions, and the right transport section those of Deck B.

- The top left gray button (labeled with a pause symbol) of each section controls the *Align beatgrid to current play-position* function. *Shift* + this button controls the *Quantize* function.

- The top right gray button (without any label) controls the *Keylock*. *Shift* + this button controls the *Reverse* function.

- The bottom left gray button (Play/pause label) controls *Play*. *Shift* + this button will make the playback jump one beat backward on this deck.

- The bottom right gray button (play label) controls *Cue* (depending on the settings in Mixxx's preferences). *Shift* + this button will make the playback jump one beat forward on this deck.

- The top blue button holds down the speed (temporary pitch bend) and the bottom blue button holds the speed up according to the labels on the controller. Pressing *Shift* + these blue buttons will act similarly but with a smaller pitch bending.

17.1.32 Gemini CDMP-7000

- Manufacturer's product page

New in version 2.0.

Note: Unfortunately a detailed description of this controller mapping is still missing. If you own this controller, please consider contributing one.

17.1.33 Gemini FirstMix

- Manufacturer's product page (archived)
- Forum thread

New in version 1.11.

Note: Unfortunately a detailed description of this controller mapping is still missing. If you own this controller, please consider contributing one.

17.1.34 Hercules DJ Console 4-Mx

The Hercules DJ Console 4-Mx is a USB controller with a built in sound card. It is very similar to the [[Hercules DJ Console RMX]], but with switches for 4 decks.

- Manufacturer's product page

New in version 1.11.

Audio

The DJ Console 4-Mx is not a USB class compliant MIDI device, although it is a USB Audio device. Drivers for Mac OS X and Windows can be found on the Hercules support page.

Warning: The controller will not work on Linux out of the box. You will need to use the Linux usermode driver. The device will only produce audio if the device hasn't been configured for ASIO under windows previously. Also, check the volumes in alsamixer.

The sound card has 4 inputs and 4 outputs (2 stereo in/out). The inputs are switchable between line-in and phono, and also is possible to select different line levels (consumer -10dBV, Pro +4dBu and boost +8dBu), so you can connect both CD players and turntables on the inputs. * Inputs are RCA. * Outputs are RCA or 1/4" TRS balanced. * Microphone input is 1/4" TS * Headphone jack is 1/4" (6.35 mm) TRS stereo

---

Hercules Tray Icon configuration

The drivers for Windows and OS X install an application that can be used to configure the audio and controller settings. Most of the settings work well on the default setting.

- **Volume/Pan/Mute**: Sets the volume output for channels 1-2 and channels 3-4. Note that the volume of the channels 3-4 refers to the line output from behind. In other words. It does not affect the volume of the headphones.

- **Line in mode**: Sets the line level of the inputs. In case of line 1-2, it also allows to redirect the microphone to the line 1-2. Else, it is mixed in hardware to the main out.

- **Talkover attenuation**: Sets how much to attenuate the main output when activating the hardware mixed microphone.

- **Enable/Disable jog wheels**: Allows to disable the jog wheels, in case the user desires not to use them.

- **Sensitivity**: Alters the sensitivity of the jog wheels. If you change this, change also the sensitivity option in the script, as described below.

- **Audio Mode**: Enables the WDM drivers (non-asio) or the specific ASIO-only driver.

- **MIDI pitch resolution**: Sets the resolution of the pitch sliders. Mixxx will work with any of the two settings, but it is recommended to set it to 14bit (8bit used) which doubles the precision versus 7bit.

- **ASIO**: You can configure the samplerate, bit depth and latency for the ASIO driver.

- **MIDI channel for controls**: *Keep these at 1-2 (Default) when you use it with Mixxx.*

- **Crossfader settings**: Allows to configure how does the crossfader react. Mixxx also offers an alternate invert option in the crossfader settings.

- **Headphone channels**: Allows to setup which input channels are sent to the headphone output.

- **Channels 1-2 hardware mix**: Allows mixing the line in or the microphone directly in hardware to the speaker output.

- **Deck mode**: *Leave this at 4 Decks (Default) if you want to use four decks with Mixxx. Else, you will only be able to use two decks.*

Options

There are several options that can be configured for this mapping. You can edit these by opening the JavaScript file in a text editor like Notepad, TextEdit, or gEdit and editing the values at the top of the file.

- **autoHeadMix**: Indicates if the headphone/main mix should automatically be set to main when none of the headphone cue buttons are activated.

- **autoHeadcueOnLoad**: Automatically enable the headphone cue select (PFL) of the deck when a song is loaded. (Like in virtual-dj)

- **beatFlashLed**: set which LED, if any, blinks with the beat

- **useVuMeters**: Simulate vuMeters using the kill and source buttons' LEDs. If enabled, shows main VUs, or deck VU depending if prefader listen button is enabled or not.

- **naviScrollSpeed**: KeyRepeat speed for navigating up/down, in milliseconds. 100 is a good value. Lower values make it scroll faster.

- **crossfaderScratchCurve**: The controller has two modes to report the crossfader position. The default/beatmix curve, and the scratch curve. The default curve reports the real position of the control. The scratch curve just crossfades on the edges. Setting this setting to true, the curve will change to scratch curve when the scratch mode is on (scratch button). Setting it to false will not change it, so it will use the setting configured in the DJHercules Tray-icon configuration.

- **vinylSpeed**: Playback speed of the virtual vinyl that is being scratched. 45.00 and 33.33 are the common speeds. (Lower number equals faster scratch)

- **sensitivity**: Jog wheel sensitivity. You should configure this setting to the same value than in the DJHercules tray icon configuration. (Normal means 1/1). If crossfaderScratchCurve is true, or the setting is changed while Mixxx is active, this value will be detected automatically.

- **alpha**: alpha value for the scratch filter (start with 1/8 (0.125) and tune from there)

- **beta**: beta value for the scratch filter (start with alpha/32 and tune from there)

- **FXbuttonsSetup**: This indicates which mapping for the FX buttons should Mixxx use. The possible values are: mixxx21, mixxx20, and original (Hercules Manual and the default setup in Virtual DJ 7 LE)

Main / Global controls

Control	Mode	Function
Cross-Fader		Fades between left and right decks
Vol. Main		Controls the main volume knob of Mixxx.
Scratch		Toggles scratch mode. When scratch mode is enabled, pressing a jog wheel controls scratching
Auto		Enable AutoDJ. Stop decks 1 and 2 to disable it using the controller.
Auto	AutoDJ on	Fade to next song.
Folders / Files		Switches between browsing the sidebar in the library, or the list. If Folders is pressed twice, opens/closes the tree branch
Files	AutoDJ on	The next song in the Auto DJ cue is skipped
Up / Down		Moves up and down in the library track list. If held down and any of the jog wheels is moved, then the jog wheel takes over the cursor movement until the up/down button is released
Cue/Mix		Control mix of main and PFL (cue) output in headphones
Mic On/Off		Enables or disables the microphone. The microphone is always mixed in hardware. The trayicon driver configuration allows to choose between direct mixing, or mix it only when enabled with the button. It no longer tries to activate Mixxx microphone talkover.

Note: The Microphone volume and the Headphone volume controls are hardware controls (i.e. they don't control Mixxx's interface)

Deck / Channel specific controls

Control	Mode	Function
Shift key		When this button is pressed and released, it toggles between keypad functi
Shift key		When this button is pressed and released, it toggles between keypad functi

Fx knob	Loop edit mode	Move the loop forward or backward in steps of one beat
Fx knob	keypad 1 held down	Increase or decrease the loop size

Note: The actions of the Keypad buttons can be changed from the JavaScript. There are three preconfigured presets corresponding to Manual/Virtual DJ LE, Mixxx 2.0 and Mixxx 2.1.

17.1.35 Hercules DJ Console (Mac Edition)

New in version 1.7.

Note: Unfortunately a detailed description of this controller mapping is still missing. If you own this controller, please consider contributing one.

17.1.36 Hercules DJ Console MK1

New in version 1.11.

Note: Unfortunately a detailed description of this controller mapping is still missing. If you own this controller, please consider contributing one.

17.1.37 Hercules DJ Console MK2

New in version 1.11.

Note: Unfortunately a detailed description of this controller mapping is still missing. If you own this controller, please consider contributing one.

17.1.38 Hercules DJ Console MK4

New in version 1.8.

Note: Unfortunately a detailed description of this controller mapping is still missing. If you own this controller, please consider contributing one.

17.1.39 Hercules DJ Console RMX

- Manufacturer's product page

The Hercules DJ Console RMX is a USB controller with a built in sound card. It is a class compliant USB Audio and HID device. Older versions of Mixxx that did not support HID required using Hercules' MIDI driver, but it is now recommend to not use the Hercules driver on GNU/Linux. If you have it installed, it is recommended to uninstall the driver and upgrade to the latest version of Mixxx if you have not already. On Windows (and Mac OS X?) the driver is still recommended.

New in version 1.11.

Audio

The sound card has 4 inputs and 4 outputs (2 stereo in/out). The inputs are switchable between line-in and phono, so you can connect both CD players and turntables on the inputs. The inputs require a high input signal (~10mV+) for turntables if you want to record audio or mix it to the output. Time-coded vinyls, for Vinyl Control, should work okay with lower input signal.

MIDI Mappings

Regular mapping

Global controls

Control	Function
Cross-Fader	Fades between left and right deck
Vol. Main	Controls output volume of your mix
Balance	Controls balance between left and right audio channel of your mix
Scratch	Toggles scratch on and off which changes the function of the deck jog wheels **Effect Shift** when held down shifts function of each decks Bass, Medium, Treble to control effect parameters
Up / Down	Moves up and down in the library track list When held down changes the jog wheels behaviour to scroll the library list
Left / Right	Moves up and down between the library sections
Monitor	Fades monitor output (headphones) between cue selected tracks output and the main mix

Deck / Channel specific controls

Control	Function
Play/Pause	Starts playing a loaded track if stopped. If track is currently playing it stops the track
Stop	Stops a currently playing track and moves to the beginning.
Cue	Sets the cue point if a track is stopped and not at the curren cue point Stops track and returns to the current cue point if a track is playing. Plays preview if a track is stopped at the cue point for as long as it's held down
Jog wheel	Seeks forwards and backwards in a stopped track Temporarily changes the playback speed for playing tracks Scratches both stopped and playing tracks when scratch mode is on Moves up / down in the tracklist if either Up or Down is held down
Forward / Backward	Seeks at high speed in a track
Load Deck A/B	Loads the currently selected track in the track list to the related deck
Cue Select	Toggles this decks output to the monitor (headphones) on and off
Pitch	Adjusts playback speed +/-10% (can be adjusted in the preferences)
Sync	Automatically sets pitch so the BPM of the other deck is matched
Pitch Reset	Resets the pitch to the tracks normal playback speed
Bass	Adjusts the volume of a channels low frequency content (ex. bass drum) Adjusts flanger period when Effect Shift is held down
Medium	Adjusts the volume of a channels mid frequency content (ex. vocals) Adjusts flanger delay when Effect Shift is held down
Treble	Adjusts the volume of a channels high frequency content (ex. hi-hats) Adjusts flanger depth when Effect Shift is held down
Kill (Bass / Medium / Treble)	Toggles output of a frequency band on and off
Gain	Controls a decks input volume
Vol. Deck A/B	Controls a decks output volume
Keypad 1	Toggles a channels flanger effect on and off
Keypad 4	Reveses playback direction when held down

Advanced mapping

The advanced mapping works similar to the normal RMX mapping, but also supports loops and hot cues. This mapping was added to not brake the previous (Mixxx -1.7.2) behaviour. Controls that differ between the normal and advanced mappings are described here.

Global controls

Control	Function
Scratch	Toggles scratch on and off which changes the function of the deck jog wheels **Effect Shift** when held down: - Shifts function of each decks Bass, Medium, Treble to control effect parameters - Shifts the Keypad (1-6) functions to effects. Currently flanger and reverse

Deck / Channel specific controls

Control	Function
Stop	**Deck shift** changes behaviour of other controls related to this deck when held down
Forward / Backward	Adjusts position of loop in/out and hot cues when a loop / hot cue button is held down
Bass	Adjusts the volume of a channels low frequency content (ex. bass drum) Soft takeover when Deck Shift is held down, lets you move knob in position before adjusting Adjusts flanger period when Scratch is held down
Medium	Adjusts the volume of a channels mid frequency content (ex. vocals) Soft takeover when Deck Shift is held down, lets you move knob in position before adjusting Adjusts flanger delay when Scratch is held down
Treble	Adjusts the volume of a channels high frequency content (ex. hi-hats) Soft takeover when Deck Shift is held down, lets you move knob in position before adjusting Adjusts flanger depth when Scratch is held down
Keypad 1	Go to hotcue 1 Set hotcue 1 when Deck Shift is held down Toggles a channels flanger effect on and off when Effect Shift is held down
Keypad 2	Go to hotcue 2 Set hotcue 2 when Deck Shift is held down
Keypad 3	Go to hotcue 3 Set hotcue 3 when Deck Shift is held down
Keypad 4	Hold down to adjust loop in position with Forward / Backward Set loop in when Deck Shift is held down Reveses playback direction when held down if Effect Shift is held down
Keypad 5	Hold down to adjust loop out position with Forward / Backward Set loop out when Deck Shift is held down
Keypad 6	Re-loop / exit turns looping on and off Half loop when Deck Shift is held down

17.1.40 Hercules DJ Console RMX2

- Manufacturer's product page

- Forum thread

- Previous forum thread

This all-in-one DJ controller features a built in 4 channel sound card with balanced XLR main outputs and a balanced microphone input. It is a USB class compliant MIDI and audio device (unlike older Hercules controllers).

New in version 1.11.

User Options

To change the mapping's user options, you have to open the script file (*.js*). *At the top of the file under **USER OPTIONS** the following settings can be made:

- **DJCRMX2.jogwheelSensivity**: Sets the jogwheel sensitivity. 1 = default, 2 is twice as sensitive, 0.5 is half as sensitive.

- **DJCRMX2.jogwheelShiftMultiplier**: Sets how much more sensitive the jogwheels get when holding [**SHIFT**]. Set it to 1 to disable jogwheel sensitivity increase when holding [**SHIFT**].

- **DJCRMX2.twinkleVumeterAutodjOn**: If true, level-meter twinkles if *AutoDJ* is enabled.

- **DJCRMX2.autoPFL**: If true, PFL / Cue (headphone) is being activated by loading a track into certain deck.

- **DJCRMX2.vuMeterOutputMaster**: If true, deck vu meters show main output (L = Deck A, R = Deck B). If false, deck vu meter shows deck output (mono).

- **DJCRMX2.showHideSamplersEffectsOnPadMode**: If true, *Samplers* and *EffectRack* get shown or hidden depending on the Pad-Mode.

General Functions

Managed by Mixxx

Figure	[**SHIFT**]?	Long-press?	Control Name	Description
11	✘	✘	[**MAIN VOLUME**]	Controls *Main* volume
13	✘	✘	[**VINYL**]	Split headcue
13	✓	✘	[**VINYL**]	Maximize library
20	✘	✘	[**CROSS FADER**]	Controls crossfader
21	✘	✘	[**CUE TO MIX**]	Controls mix in headphones between PFL and main signal
7	✘	✘	[**MIC ON/OFF**]	Toggle microphone on/off and talkover on/off
15 (Right)	✘	✘	[**FILES**]	Go To Item in Library
15 (Right)	✓	✘	[**FILES**]	Add to bottom of Auto DJ playlist
15 (Left)	✘	✘	[**FOLDERS**]	Move focus backward in Library
15 (Left)	✓	✘	[**FOLDERS**]	Toggle Auto DJ
15 (Up)	✘	✘	[**UP**]	Move vertically up in Library
15 (Up)	✘	✓	[**UP**]	Scroll vertically up in Library
15 (Down)	✘	✘	[**DOWN**]	Move vertically down in Library
15 (Down)	✘	✓	[**DOWN**]	Scroll vertically down in Library

Managed by the controller

The following functions directly affect the controller's sound card, so adjusting these will not change anything on screen in Mixxx:

Figure	[**SHIFT**]?	Long-press?	Control Name	Description
22	✘	✘	[**HEADPHONES VOLUME**]	Controls the headphones output volume
6	✘	✘	[**MIC VOLUME**]	Controls the microphone volume (gain)

17.1.41 Hercules DJControl MIX

- Manufacturer's product page
- Manufacturer's support and downloads page
- Forum thread

New in version 2.4.

Compatibility

This controller is a class compliant USB MIDI, so it can be used without any special drivers on GNU/Linux, Mac OS X, and Windows.

Note: In order to use this mapping, the DJControl MIX must be physically connected to the computer through USB. It was not conceived to use the controller connected via Bluetooth.

Sound Card Setup

This device does not have a built in audio interface.

See also:

Please refer to *example setups section* for more details about the audio configuration in Mixxx.

Mapping description

Decks

Control	Function
SYNC button	Toggle *Sync Lock*.
SHIFT + SYNC button	Set deck as Sync leader.
CUE button	Specifies, plays or recalls temporary cue point.
SHIFT + CUE button	Return to the beginning of the track.
Play button	Play/Pause the current track.
SHIFT + Play button	Cue Stutter.
VINYL button	Toggle scratch mode (default: on)
TEMPO	Controls pitch/tempo ratio

Mixer

Control	Function
Crossfader	Fades between deck 1 and 2
MASTER	Controls the main output volume
HEADPHONE knob	Controls the headphone output volume
Headphone buttons	Toggles PFL/Cue (headphones) for specific deck
SHIFT + CUE MASTER	Toggles between headphone's audio source (Cue / Main)
SHIFT + SPLIT ON/OFF	Toggles split cue (headphones)
Volume	Controls deck volume
Filter/Bass knob	Controls deck's filter/ equalizer low frequencies
Filter/Bass button	Toggles knob control between Filter/Bass

Performance Pads

Hot Cue Mode

Control	Function
Pad 1 - 4	Set and trigger *hotcue* 1 - 4
SHIFT + Pad 1 - 4	Delete *hotcue* 1 - 4.

Loop Mode

Control	Function
Pad 1	Activate beatloop of 1/2 beat size.
Pad 2	Activate beatloop of 1 beat size.
Pad 3	Activate beatloop of 2 beats size.
Pad 4	Activate beatloop of 4 beats size.

FX Mode

Control	Function
Pad 1 - 3	Toggle Effect 1 - 3.
SHIFT + :hwlabel: *Pad 1 - 3*	Select Next available Effect
Pad 4 (Deck A)	Toggle Effect Unit 1.
Pad 4 (Deck B)	Toggle Effect Unit 2.

Note: The effects can be applied in two ways:

- Permanent = Press pad to turn effect on, press again to turn off.

- Momentary = Press and Hold. The effect will be on until the pad is released.

Sampler Mode

Control	Function
Pad 1 - 4 (Deck A)	Trigger Sampler 1 - 4.
Pad 1 - 4 (Deck B)	Trigger Sampler 5 - 8.

17.1.42 Hercules DJControl AIR

This is one of the cheapest Hercules DJ controller from Hercules leisure DJ controllers brand. There are actually many versions of it:

- DJControl AIR (The one shown in picture above)

- DJControl AIR Street Edition (Limited Edition)

- DJControl AIR S Series

- DJControl AIR for iPad

This controller have built-in soundcard with mixer output (3.5mm jack) and headphones output (6.35mm jack).

The main fun and uncommon feature of this controller is its proximity sensor (IR) located above EQ potentiometers and between top horizontal vu-meter.

- Manufacturer's product page

- Forum Thread

New in version 1.11.

Sound Hardware settings

- Sample rate: 44100 Hz
- Main Output: Channels 1 - 2
- Headphones Output: Channels 3 - 4

Mapping Description
Fig. 19: Hercules DJControl AIR (schematic view). This picture is taken from the Getting Started Tutorial (courtesy of Guillemot Corporation S.A.).

We assume from the annotated picture above that each decks have same controls.

Jogs / Jogs Wheels (1)

Pressing Jogs enable the scratch mode.

PADs (2)

	Loops	Effects	Samples
1	Loop In	Flanger (Mixxx 1.10)	Sample 1
2	Loop Out	Align Beat Grid to current position	Sample 2
3	Loop Double	Toggle Quantitize	Sample 3
4	Reloop/Exit	Toggle KeyLock	Sample 4

Proximity Sensor (4)

Currently not mapped

Library Navigation (8)

- **Folder** : Switch to previous view (library, playlist…)
- **Files** : Switch to next view (library, playlist…)
- **Up** : Scroll to previous track in library/playlist
- **Down** : Scroll to next track in library/playlist

Load track to Deck (9)

This button load track to the selected deck (A => Deck 1, B => Deck 2)

Headphone listen (PFL) (10)

This toggle the Pre Fader Listen for the selected Deck(s)

Rec (11)

Currently not mapped

Load selected track to sample (12)

This is done by pressing and holding the **Magic** button while pressing on the desired sample PAD.

SpinBack(13)

Currently not mapped

Sync (16)

Synchronize the tempo to the other deck one (One-time beat sync, tempo/phase).

Speed Adjustment (17)

Adjust speed slower [-] or faster [+] in Coarse mode.

17.1.43 Hercules DJControl Compact

- Manufacturer's product page
- MIDI mapping manual

The Hercules DJControl Compact is a simple controller for basic two-channel mixing. This device does not have a built in sound card, so it would require a *splitter cable* or *separate audio interface* to be able to preview tracks in headphones. It also does not have buttons for routing decks to headphones.

Thanks to Hercules for supporting the development of this mapping by providing a controller.

New in version 2.1.

Mapping description

Much of the Compact's behavior is hard-coded into its firmware, including shift button messages and button mode selections.

Shift + Play jumps to the beginning of the track and stops playback.

The cue button behaves differently depending on the *cue mode set in Mixxx's Preferences*.

The sync button synchronizes the tempo to the other deck. Press and hold sync to engage *Sync Lock*.

There is only one each of the Mode, Shift, and Scratch buttons, so they affect both decks.

Shift + Scratch (Automix) toggles AutoDJ on/off.

Jog Wheels

When Scratch is off, turning a jog wheel bends the pitch of the track. When Scratch is on, turning a jog wheel scratches that deck. Holding Shift and turning a jog wheel adjusts the playback rate (tempo). Enable keylock on a deck by clicking the music note button on screen if you do not want the pitch to change when adjusting the tempo.

Pad Grid

Press the MODE button to cycle through each pad mode.

Loop mode

In loop mode, the buttons are mapped in a way that's more artistically expressive:

- Button 1 enables and disables the loop
- Button 2 enables an 8 beat loop
- Button 3 divides the current loop in half
- Button 4 doubles the length of the current loop
- Shift + Button 1 performs an 1/8th beat roll
- Shift + Button 2 performs an 1/4th beat roll
- Shift + Button 3 performs an 1/2th beat roll
- Shift + Button 4 performs an 1 beat roll

FX mode

- Button 1 enables and disables the first FX chain for Channel 1
- Button 2 enables and disables the second FX chain for Channel 1
- Button 1 enables and disables the first FX chain for Channel 2
- Button 2 enables and disables the second FX chain for Channel 2

Shift-FX buttons are not mapped.

Sampler mode

- Left side buttons play Sample Decks 1 through 4
- Right side buttons play Sample Decks 5 through 8
- Shift + Buttons stops Sample Deck and puts the playhead at the cue point

Cue mode

- Each button activates the hotcue with that number
- Shift + button clears the hotcue with that number

17.1.44 Hercules DJControl Inpulse 200

- Manufacturer's product page
- Manufacturer's support and downloads page
- Forum thread

New in version 2.3.0.

Compatibility

This controller is a class compliant USB MIDI and audio device, so it can be used without any special drivers on GNU/Linux, Mac OS X, and Windows. However, if you wish to use the ASIO sound API under Windows, please install the latest driver package available from the Support page.

Sound Card Setup

This controller has built-in 4 channel output sound card, with MASTER output (RCA) and HEADPHONE output (3.5mm jack).

1. Open *Preferences > Sound Hardware*
2. Select the *Output* tab
3. From the *Main* drop-down menu, select the audio interface, then *Channels 1 - 2*
4. From the *Headphones* drop-down menu, select the audio interface, then *Channels 3 - 4*
5. Click *Apply* to save the changes.

See also:

The *example setups section* provides more details about the audio configuration in Mixxx.

Note: The MASTER and HEADPHONE knobs, as well as the MASTER button are hardware controls and interact directly with the integrated sound card's output. Although they also send MIDI messages, they have NOT been mapped in Mixxx, so do not expect an on-screen reaction when using them. This was done to prevent the knobs to adjust both the gain on the controller's sound card and in Mixxx.

Mapping description

All controls not mentioned behave as labeled.

Decks

Control	Function
SYNC button	Toggle *Sync Lock*.
SHIFT + SYNC button	Set deck as Sync leader.
CUE button	Specifies, plays or recalls temporary cue point.
SHIFT + CUE button	Return to the beginning of the track.
Play button	Play/Pause the current track.
SHIFT + Play button	Cue Stutter.
VINYL button	Toggle scratch mode (default: on)
Loop IN button	Enable Beatloop.
SHIFT + Loop IN button	Halve the current loop size.
Loop OUT button	Disable Beatloop.
SHIFT + Loop OUT button	Double the current loop size.
Beat Align LED	Track end warning (make sure BEATMATCH GUIDE is on for this to work)

Browser

Control	Function
BROWSER turn	Move up/down list.
SHIFT + BROWSER turn	Scroll up/down list.
BROWSER press	Switch focus between list and file view.
SHIFT + BROWSER press	Maximize/Minimize library view.
ASSISTANT button	Toggle AutoDJ (playlist must be set).

Performance Pads

Hot Cue Mode

Control	Function
Pad 1 - 4	Set and trigger *hotcue* 1 - 4
SHIFT + Pad 1 - 4	Delete *hotcue* 1 - 4.

Roll Mode

Control	Function
Pad 1	Set Beatloop of 1 beat size.
Pad 2	Set Beatloop of 2 beat size.
Pad 3	Set Beatloop of 4 beat size.
Pad 4	Set Beatloop of 8 beat size.

FX Mode

When using **Firmware v1.68 and earlier**, each FX pad will send multiple and different Note and CC messages. As these could not all be used properly with Mixxx current effect framework, a simplified configuration was assigned using the pad in SHIFT mode for convenience.

Control	Function
SHIFT + Pad 1 - 3	Toggle Effect 1 - 3.
SHIFT + Pad 4 (deck A)	Toggle Effect Rack 1.
SHIFT + Pad 4 (deck B)	Toggle Effect Rack 2.

However, after applying **Firmware v1.72**, each FX pad now sends a simple Note On/Note Off (as is the case in every other Pad mode). This makes it easier to use the pads to control effect and the latest mapping take advantage of this possibility by removing the use of the SHIFT button.

Control	Function
Pad 1 - 3	Toggle Effect 1 - 3.
Pad 4 (deck A)	Toggle Effect Rack 1.
Pad 4 (deck B)	Toggle Effect Rack 2.

See also:

Read the update guide for more details about updating the firmware.

Sampler Mode

Control	Function
Pad 1 - 4 (deck A)	Trigger Sampler 1 - 4.
Pad 1 - 4 (deck B)	Trigger Sampler 5 - 8.

Unmapped Controls

The following controls are not mapped because they are controlled by the hardware.

- MASTER knob

- HEADPHONE knob

- MASTER buttons

- BEATMATCH guide

17.1.45 Hercules DJControl Inpulse 300

- Manufacturer's product page
- Manufacturer's support and downloads page
- Forum thread

New in version 2.2.4.

Compatibility

This controller is a class compliant USB MIDI and audio device, so it can be used without any special drivers on GNU/Linux, Mac OS X, and Windows. However, if you wish to use the *ASIO sound API* under Windows, please install the latest driver package available from the Support page.

Note: Firmware upgrade (v1.72) is required for pads to work correctly in **FX Mode**.

When using **Firmware v1.68** and earlier, pads in FX Mode will not work as expected.

For more details about upgrading the Firmware.

Sound card setup

This controller has built-in 4 channel output sound card, with MAIN output (RCA) and HEADPHONE output (3.5mm jack).

- Open **Preferences > Sound Hardware**
- Select the **Output** tab
- From the **Main** drop-down menu, select the audio interface, then **Channels 1-2**
- From the **Headphones** drop-down menu, select the audio interface, then **Channels 3-4**
- Click **Apply** to save the changes.

See also:

The *example setups section* provides more details about the audio configuration in Mixxx.

Note: The **Master** and **Headphone** knobs, as well as the **Master** button are hardware controls and interact directly with the integrated sound card's output. Although they also send MIDI messages, they have NOT been mapped in Mixxx, so do not expect an on-screen reaction when using them. This was done to prevent the knobs to adjust both the gain on the controller's sound card and in Mixxx.

Mapping description

Decks

Control	Function
SYNC button	Toggle *Sync Lock*.
SHIFT + SYNC button	Set deck as Sync leader.
CUE button	Specifies, plays or recalls temporary cue point.
SHIFT + CUE button	Return to the beginning of the track.
Play button	Play/Pause the current track.
SHIFT + Play button	Cue Stutter.
VINYL button	Toggle scratch mode (default: on)
Loop IN button	Enable Beatloop 4 beats.
SHIFT + Loop IN button	Halve the current loop size.
Loop OUT button	Disable Beatloop.
SHIFT + Loop OUT button	Double the current loop size.
Beat Align LED	Track end warning (make sure BEATMATCH GUIDE is on for this to work).
SLIP	Toggles splip mode.
Q	Toggles quantize.
SHIFT + Q	Adjusts beatgrid so closest beat is aligned with the current playposition.

Browser

Control	Function
BROWSER encoder (turn)	Move up/down list.
SHIFT + BROWSER encoder (turn)	Move left/right (fold/unfold) list.
BROWSER encoder (press)	Switch focus between list and file view.
SHIFT + Encoder (press)	Maximize/Minimize library view.
ASSISTANT button	Toggle AutoDJ (be sure a playlist was created for AutoDJ before activating this function).

FX

Control	Function
ON pad	Toggle FX 3 on/off.
SHIFT + ON pad (select)	Cycle to the next effect after the currently loaded effect.

Performance Pads

Hot Cue Mode

Control	Function
Pad 1 - 8	Set and trigger *hotcue* 1 - 8
SHIFT + Pad 1 - 8	Delete *hotcue* 1 - 8.

Roll Mode

Control	Function
Pad 1	Activate Beatloop of 1/8 beat size.
Pad 2	Activate Beatloop of 1/4 beat size.
Pad 3	Activate Beatloop of 1/2 beat size.
Pad 4	Activate Beatloop of 1 beat size.
Pad 5	Activate Beatloop of 2 beat size.
Pad 6	Activate Beatloop of 4 beat size.
Pad 7	Activate Beatloop of 8 beat size.
Pad 8	Activate Beatloop of 16 beat size.

FX Mode

Control	Function
Pad 1 - 3	Toggle Effect 1 - 3.
Pad 5 - 7	Cycle to the next effect for Effect 1 - 3.
Pad 4	Toggle Effect Unit 1.
Pad 8	Toggle Effect Unit 2.
Shift + Pad 1 - 3	Toggle Effect 1 - 3. (Effect Unit 3 / 4 for deck A / B)
Shift + Pad 5 - 7	Cycle to the next effect for Effect 1 - 3 (Effect Unit 3 / 4 for deck A / B).
Shift + Pad 4	Toggle Effect Unit 3.
Shift + Pad 8	Toggle Effect Unit 4.

Sampler Mode

Control	Function
Pad 1 - 8 (deck A)	Trigger Sampler 1 - 8.
Pad 1 - 8 (deck B)	Trigger Sampler 9 - 16.

Beatjump Mode

Control	Function
Pad 1 - 2	Jump backward/forward by 1 beat.
Pad 3 - 4	Jump backward/forward by 2 beats.
Pad 5 - 6	Jump backward/forward by 4 beats.
Pad 7 - 8	Jump backward/forward by 8 beats.

Known issues

Controls not included in this mapping

- Master knob (Hardware control)

- Headphone knob (Hardware control)

- Master buttons (Hardware control)

- Beatmatch guide (Hardware control)

- PADS: Slicer/Slicer Loop

- PADS: Toneplay

17.1.46 Hercules DJControl Instinct (S)

This is the cheapest all-in-one controller with an integrated sound card. The DJControl Instinct S is functionally identical to the DJ Control Instinct, but has a brushed stainless finish.

- Manufacturer's product page

- Forum thread

New in version 1.10.1.

Setup

The controller is a class compliant MIDI controller, so you should be able to just plug it in and it should be recognized in Mixxx. No need for drivers.

Make sure to select the correct mapping for the controller and enable it.

Audio Channels

There are two outputs on the controller itself: the headphones output with builtin volume control on the side facing you and the speakers output.

In Mixxx the headphones output is on channels 3 and 4, so select the "Channels 3-4" item to get stereo output. The speakers output is on channels 1 and 2, so to get stereo output you want to select the "Channels 1-2" item.

Controls
Fig. 20: Hercules DJControl Instinct (schematic view). This picture is taken from product poster (courtesy of Guillemot Corporation S.A.).

1. Jog Wheel for the deck on the side of the wheel

2. Action buttons for the deck on the side of the controls, depending on the mode they do the following:

   - Hot Cue:
     - **1:** Set and play (by holding it) from Hot Cue 1
     - **2:** Set and play (by holding it) from Hot Cue 2
     - **3:** Reset Hot Cue 1
     - **4:** Reset Hot Cue 2

   - Loop
     - **1:** Set Loop start
     - **2:** Set loop end
     - **3:** Shrink loop (halves it)
     - **4:** Exit loop

- Effect

    - **1:** Toggle Effect 1

    - **2:** Toggle Effect 2

    - **3:** Toggle Effect 3

    - **4:** Toggle Effect 4

- Sample

    - **1:** Play Sample 1

    - **2:** Play Sample 2

    - **3:** Play Sample 3

    - **4:** Play Sample 4

3. Mode status display. The current mode is glowing or if none is on, Hot Cues are enabled.

4. Headphone volume controls

5. No direct use, used as a button to add a second layer of controls

6. Switch the current mode for both decks

7. Knobs to adjust the EQ of the deck they are on. Top knob adjusts highs, middle knob the mids and bottom know the lows.

8. Buttons to browse your library. The up and down button go up and down in the current playlist, The folder/left button goes up in the playlist list and the Files/right button goes down in the playlist list.

9. Load the currently selected track to the respective deck (A is the left deck, B is the right deck)

10. Listen to this deck unmixed on the headphones

11. Deck volume adjusts the output volume of the respective deck

12. Crossfader

13. Temporary pitch shift. Pressing the Vinyl button increases the shift.

14. Adjust tempo. Pressing both buttons together resets to the original tempo. Pressing the Vinyl button takes the steps bigger.

15. Fast forward and backward buttons for the respective decks

16. Sync tempo of this deck to the tempo of the other deck

17. If pressed while paused sets the cue and when held plays from the cue, when pressed during playback jumps to the cue.

18. Play and pause playback of the respective decks

17.1.47 Hercules DJControl Jogvision

- Manufacturer's product page

- Manufacturer's support and downloads page

- Forum thread

Whether you're just getting started DJing or you've already refined your skills, you can let your creativity run wild. Enjoy excellent precision and comfort to create your mixes using the circular displays on the jog wheels to guide your movements and perfect your scratches, and have fun with the amazing contactless AIR Control sensor. Your adventure starts right here and now. It's your turn!

Compatibility

This controller is a class compliant USB MIDI and audio device, so it can be used without any special drivers on GNU/Linux, Mac OS X, and Windows. For Windows, please install the latest driver package available from the manufacturer's product page.

Sound card setup

This controller has built-in 4 channel output sound card, with:

Channel	Port
Main Output	RCA and 3.5mm jack
Booth Output	RCA and 3.5mm jack
Headphone Output	6.35mm and 3.5mm jack
Microphone Input	6.35mm jack
Auxiliary Input	3.5mm jack

- Open *Preferences* ‣ *Sound Hardware*

- Select the *Output* tab

- From the *Main* drop-down menu, select the audio interface, then *Channels 1-2*

- From the *Headphones* drop-down menu, select the audio interface, then *Channels 3-4*

- Click *Apply* to save the changes.

Please refer to the user manual for more details about the audio configuration in Mixxx.

Note: The MASTER and HEADPHONE knobs, as well as the MASTER button are hardware controls and interact directly with the integrated sound card's output.

Mapping configuration

Edit the `Hercules_DJControl_Jogvision-scripts.js`, and change the `CFG.(user|fine)` variables to fit your needs:

Hint: This controller mapping can be customized by editing the corresponding Javascript file and editing the configuration options at the top of the file.

All controls act as labeled, but there are some additional functionalities that have been added:

Control	Description
MODE + LOOP ON	Set a loop_in mark (with currently defined loop_size), activate it, and enable slip mode
MODE + LOOP X½ / LOOP X2	Do a beatjump backward/forward
MODE + LOOP SIZE knob	Decrease/Increase pitch (only key, not tempo!)
MODE + Jog Wheel plate (playing)	Scratch with 'Slip' on (deactivate 'Slip' when plate is released)
MODE + Jog Wheel plate (stopped)	Move song position backward/forward faster
MODE + BROWSER knob turn	Move library's selected position multiple elements forward/backward
MODE + LOAD buttons	Toggle 'quantize' for deck where MODE button is pressed
SHIFT + LOAD buttons	Eject track from deck where SHIFT key is pressed
SHIFT + BROWSER knob press	Activate (double-click) currently selected item in browser
SHIFT + LOOP SIZE knob	Move existing loop forward/backward
SHIFT + Jog Wheel touch	Do a backspin
SHIFT + MULTI FX	Set beatgrid to current position
SHIFT + AIR CONTROL Filter	Do the reverse than standard, that is, high-pass filter

17.1.48 Hercules DJControl MP3

New in version 1.11.

Note: Unfortunately a detailed description of this controller mapping is still missing. If you own this controller, please consider contributing one.

17.1.49 Hercules DJControl MP3 e2 / MP3 LE / Glow

The Hercules DJ Control MP3 e2, MP3 LE, and Glow are USB controllers that have identical controls and share the same mapping. These controllers do not have a built in sound card, so a *splitter cable* or *separate audio interface* is recommended for use with it.

New in version 1.11.

Changed in version 2.3.0.

This new version is intended to work in a more intuitive way. Once you click on a button, it does its original function.

Note: These controllers are not class compliant *MIDI* devices. On Linux, older versions of Mixxx required using a custom Hercules kernel module. This is neither necessary not recommended anymore.
Fig. 21: Hercules DJControl MP3 e2 (schematic view)

Mapping description (by function)

Library

Number	Control	Function
6	Folder	Toggle playlist selection
10	Files	Toggle track selection
8	Up arrow	Go one playlst/track up
8	Down arrow	Go one playlst/track down
18	Load A/Load B	Loads the currently highlighted track into the corresponding deck (A or B)

Main/Headphones

Number	Control	Function
19	Crossfader	Fades between left (channel 1) and right (channel 2) deck
20	Headphone monitor	Toggles deck output to the headphones monitor on/off

Decks / Channels

Playing

Number	Control	Function
18	Load A/Load B	Loads the currently highlighted track into the corresponding deck (A or B)
14	Play	Starts or stop a loaded track
15	Cue	Sets the cue point if a track is stopped and not at the current cue point. Stops track and returns to the current cue point if a track is playing. Plays preview if a track is stopped at the cue point for as long as it's held down
12	Forward / Backward	Move Forward/Backward in track
7	Scratch	Enable or disable the scratch mode on all two decks
16	Jog wheel	Seeks forwards and backwards in a stopped track. Temporarily changes the playback speed for playing tracks. Absolute sync of the track speed to the jog wheel if scratch mode enabled

Volume / Equalizer / Effects

Number	Control	Function
17	Deck volume slider	Controls the deck output volume, with soft takeover on deck switch.
5	Equalizer knobs	Adjusts the gain of the low/medium/high equalizer filter. No soft takeover.
4	Shift	Toggle Effects Selection
11	Button 1/2/3	Toggle Effect 1/2/3 for corresponding deck (with shift activated)

Loops

Number	Control	Function
11	Button 1	Loop 1
11	Button 2	Loop 2
11	Button 3	Loop 4
11	Button 4	Loop 8

Pitch / Syncing

Number	Control	Function
1	Pitchbend -/+	Temporary Holds the pitch 4% lower or higher while pressed
3	Pitch knobs	Adjust playback pitch / speed
13	Sync	Automatically sets pitch so the BPM of the other deck is matched
2	Leader Tempo	Enable and lock Sync Mode

Troubleshooting

Jog wheels not working or controller not responding

If your jog wheels doesn't work, or nothing works on the controller even when you have carefully read all other resources, you should be aware that this controller stores at least two configuration options in the controller:

- Enable/disable Jog Wheels
- MIDI channel to use

and maybe a third one: Jog wheel sensitivity

With factory default settings, the jog wheels are enabled and the MIDI channel used is channel 1. The mapping is made for channel 1 only. If your controller is configured for another channel, nothing will work and if you launch Mixxx with –`-controllerDebug` parameter, you will have lines like this one showing in the logs when you press a button on the controller :

```
Debug [Controller]: "DJ Control MP3 e2 : 3 bytes: B3 38 38 "
```

note the B3 here. it's B<MIDI Channel # - 1>. So this controller is configured on channel 4. controller configured on channel 1 will show B0, which is correct.

To change these parameters, you have to use the configuration tool that comes with the Hercules driver on on the Hercules support page. Unfortunately, the configuration tool is only available for Windows and Mac OS X. We are not aware of any solution for Linux. So if you normally use Linux, you will have to find a computer with Windows or Mac OS X, install the Hercules driver, plug-in the controller and change configuration. You will only need to do this once, then the controller should work with Linux.

Controller not recognized as bulk controller

It has been reported that when the Hercules drivers are installed on a Windows, the driver takes over the bulk communication with the controller so it cannot be recognized by Mixxx as a bulk controller. Uninstall the Hercules driver and use it as a USB bulk controller.

17.1.50 Hercules DJControl Starlight

Ultra-compact, ultra-light, ultra-practical and ultra-unique with its lights, the DJControl Starlight packs all the features needed to mix and scratch. With its built-in audio interface, the DJControl Starlight offers pre-listening in the headphones so you can then play your mix on speakers, which is perfect for learning or creating new mixes. The system is so comprehensive for its size that it boasts all the essential features such as bass equalization/filter knobs for smooth transitions or touch-sensitive jog wheels for easy scratching. The added bonus: the bright and powerful RGB backlighting.

- Manufacturer's product page

- Manufacturer's support and downloads page

- Forum thread

New in version 2.3.

Compatibility

This controller is a class compliant USB *MIDI* and audio device, so it can be used without any special drivers on GNU/Linux, macOS, and Windows. However, if you wish to use the ASIO sound *API* under Windows, please install the latest driver package available from the Support page.

Sound card setup

This controller has built-in 4 channel output sound card, with main and headphone output (both 3.5mm jack).

- Open **Preferences > Sound Hardware**

- Select the **Output** tab

- From the **Main** drop-down menu, select the audio interface, then **Channels 1-2**

- From the **Headphones** drop-down menu, select the audio interface, then **Channels 3-4**

- Click **Apply** to save the changes.

See also:

More details about audio configuration can be found in the *here*.

Note: The **Main** and **Headphone** knobs are hardware controls and interact directly with the integrated sound card's output. Although they also send *MIDI* messages, they have NOT been mapped in Mixxx, so do not expect an on-screen reaction when using them. This was done to prevent the knobs to adjust both the gain on the controller's sound card and in Mixxx.

The *gain staging section of this manual* explains how to set your levels properly when using Mixxx.

Mapping description

The base LED is linked to the VU Meter for light show effect on each deck respectively.

All controls not listed here work as labeled.

Decks

Button	Description
SYNC	Sync lock
SHIFT + SYNC	Set deck as sync leader
CUE	Cue point
SHIFT + CUE	Return to beginning of loaded song
PLAY	Play/Pause
SHIFT + PLAY	Cue Stutter
VINYL	Scratch On/Off (Default: on)

When Vinyl is on, turning a jog wheel scratches that deck. When Vinyl is off, turning a jog wheel bends the pitch of the track.

Pads

Pad Mode	Button	Description
Hot Cue	Pads 1-4	Set and trigger Hot Cue 1-4
Hot Cue	SHIFT + Pads 1-4	Pad = Delete Hot Cue 1-4.
Loop	Pad 1	Beatloop 1/2 beat
Loop	Pad 2	Beatloop 1 beat
Loop	Pad 3	Beatloop 2 beats
Loop	Pad 4	Beatloop 4 beats
FX	Pads 1-3	FX 1-3 on/off
FX	SHIFT + Pads 1-3	FX 1-3 select
FX	Pad 4	FX Rack 1/2 On/Off (Deck A/B respectively)
Sampler	Pads 1-4 (Deck A)	Sampler 1-4
Sampler	Pads 1-4 (Deck B)	Sampler 5-8

17.1.51 Hercules P32 DJ

- Manufacturer's product page
- Manufacturer's technical support page
- Forum thread

The Hercules P32 DJ is a relatively compact DJ controller with a built-in sound card. Rather than jog wheels, it has a 4 x 4 multicolor (red/blue/purple) pad grid for each deck. The pad grids can be switched between 4 different layers to perform a variety of functions.

Thanks to Hercules for supporting the development of this mapping by providing a controller.

New in version 2.1.

Changed in version 2.3.0: Add pitch controls in loop mode and increased head mix knob precision.

Fig. 22: https://www.hercules.com/wp-content/uploads/2018/05/HerculesDJ_HerculesP32DJ_top-1400x747.jpg

Changed in version 2.3.5: Dry/Wet knobs can be replaced by pregain (optional)

Compatibility

This controller is a class compliant USB MIDI and audio device, so it can be used without any special drivers on GNU/Linux, Mac OS X, and Windows. However, it recommended to install the driver on Windows to be able to use the *ASIO sound API*.

Sound card setup

This device has a built in 4 channel output sound card. There are 2 RCA outputs for the main output and a 1/4" TRS stereo headphone jack. There are buttons in the center of the controller that adjust the sound card's headphone output volume in hardware. These do not adjust the headphone gain in Mixxx.

Warning: There is no main output volume control on the device, but the main output volume of the sound card can be controlled from the OS mixer. The device comes with the main output set to 45%. So, for the best *gain staging*, turn the volume of the main output all the way up in your operating system mixer.

Mapping description

User configurable options

There are a few user configurable options available for you to customize. You can change these by opening the `Hercules-P32-scripts.js` file with your text editor of choice (such as Notepad, TextEdit, Kate, or gEdit) and editing the lines at the very top of the file.

- **loopEnabledDot**: whether to use the dot on the loop size LED display to indicate that a loop is active. This restricts loop sizes to 2-32 beats and may be helpful if you never use loops less than 2 beats long. Otherwise the dot indicates a loop size equal to 1/(# on the LED display).

- **samplerCrossfaderAssign**: whether to assign the samplers to the crossfader. If true, the samplers controlled by the left pad grid are assigned to the left of the crossfader and the samplers controlled by the right pad grid are assigned to the right of the crossfader.

- **toggleEffectUnitsWithDecks***: whether to automatically toggle the effect unit controls between units 1 & 3 on the left and units 2 & 4 on the right when toggling decks between decks 1 & 3 and 2 & 4

Encoders

The encoders do not behave exactly as labeled.

- **Browse encoder**: scrolls through library. Pushing toggles big library view. Turning with shift controls the cue/main mix going to the headphone output. Pushing with shift toggles split cue mode (left ear of headphone output plays cue signal, right ear plays main signal).

The mapping of the encoders does not match their labels. They are labeled on the controller symmetrically, but they are mapped asymmetrically like the rest of the deck controls:

- **Left encoder**: Turning halves/doubles the loop size. Turning with shift beatjumps by 1 beat forward/backward, or if a loop is enabled, moves the loop 1 beat forward/backward. Pushing (de)activates a loop. Pushing with shift reactivates a disabled loop, or if a loop is enabled, jumps to the loop in point and stops the deck.

- **Right encoder**: Turning adjusts the pitch, or with keylock on, just the tempo. Pushing resets the pitch to the track's default. Turning with shift jumps forward/backwards by the beatjump size. If a loop is enabled, turning with shift moves the loop by the beatjump size. Hold shift, push, and turn to adjust the beatjump size, shown on the LED display on the controller. When the encoder is released, the LED display goes back to showing the loop size.

Effects

Refer to the *Standard Effects Mapping* page for details on how to use the effects sections.

When the pad grid is in Slicer mode, the pads in the top left of the grid assign the deck to Effect Units 1-4.

Pressing the headphone button with shift assigns the effect unit on that side to the headphone channel. This is useful for previewing an effect on a playing deck before using it. The headphone (PFL) button must also be pressed on the deck to hear the effect on it in headphones.

Other controls

- **Record button**: toggles recording on and off.

- **Slip button**: toggles slip mode on and off for all decks. With shift, toggles between decks 1 & 3 on the left and decks 2 & 4 on the right.

- **Pad grid**: Press the Hotcue/Loop/Slicer/Sampler buttons to activate different modes

- **Hotcue mode**: Press an unlit pad to set a hotcue. Press a red pad to activate a hotcue. Press a red pad with shift to delete a hotcue.

- **Loop mode**: Control manual loops and other miscellaneous functions. On the top row, from left to right, the pads set the loop in point, loop out point, and toggle the loop (without changing its size). Hold the loop in or loop out button while moving the waveform with the mouse to adjust the loop in/out point (new in Mixxx 2.1). On the bottom row, the two purple buttons temporarily decrease/increase the playback speed while they are held down for beatmatching. The button to the right of those shifts the beat grid to the current position. The right column is for pitch management, from top to bottom: match the key with the other track, pitch up, pitch down, and reset to the default key of the track.

- **Slicer mode**: refer to Effects section above

- **Sampler mode**: Press an unlit pad to load the track selected in the library to that sampler. Pads are blue when the sampler is loaded but not playing and red when playing. Press a blue pad to play the sample from its cue point. Press a red pad to jump back to the sample's cue point. Press a red pad with shift to stop a playing sample. Press a blue pad with shift to eject a sample. Note that samplers are independent from decks; the left grid controls samplers 1-16 and the right grid controls samplers 17-32.

- **Sync**: Short press to sync to other deck. Press and hold to enable sync lock.

- **Shift + sync**: toggle quantize

- **Shift + cue**: jump to beginning of track and stop

- **Shift + play**: toggle reverse playback

- **Shift + load**: ejects a track from the deck

- **EQ knobs, volume faders, crossfader, headphone button, play, cue, sync, and load** all behave as labeled. Dry/wet knob can optionally be used as pregain (see *dryWetKnobAsPregain* variable)

17.1.52 ION Discover DJ

The ION Discover DJ is a cheap budget MIDI controller meant to "discover DJ-ing" for people with a potential interest. It does not have a built in sound card, so a *splitter cable* or *separate audio interface* is required to use headphones with it.

- Forum thread

New in version 1.8.

Compatibility

This controller is USB MIDI class compliant, so it is plug-and-play on all platforms without having to install any special drivers. The manufacturer's page only mentions Windows and Mac but it's confirmed working on Linux as well.

Library browsing

The controls for library browsing are in the center of the controller.

Control	Function
Rotary encoder	Track selection
Load buttons	Loads currently highlighted track to the corresponding deck (only if no audio is playing)
Pushing rotary encoder	Maximizes/minimizes the library

Jog wheels

The button in the center can be used to switch the jog wheels between search and scratch mode. In search mode, the jog wheels can be used to seek to different parts of a song when paused. When that deck is playing, the jog wheels can be pushed/pulled to speed up/slow down the playback. This is useful for beatmatching.

Pressing the center button will put the jog wheels in scratch mode, which means that the deck in Mixxx will follow the absolute movement of the jog wheels. In this mode the Scratch button is lit.

Equalizers

This controller only has a 2-band equalizer but Mixxx uses a 3-band EQ. Therefore, the volume knob has been mapped to the low EQ, the bass knob has been mapped to the mid EQ, and the treble knob has been mapped to the high EQ. For controlling the volume of the decks, use the crossfader.

Other buttons

The pitch buttons will control the tempo which also controls the pitch, except when keylock is on (padlock icon on screen).

Button	Function	Light
Sync	Matches the BPM of that deck to the song playing in the other deck	Blinks according to the beatgrid
Rev	While held the deck plays in reverse	only lights when pressed
CUE	Attached to the cue control in mixxx	follows cue button on screen
play/pause	Play/pause the deck	follows play button on screen

The behavior of the cue and play buttons can be configured *in Mixxx's preferences <interface-cue-modes>*.

17.1.53 ION Discover DJ Pro

Ion Discover DJ Pro is a 2-deck controller with integrated audio interface and iPhone dock.
Fig. 23: ION Discover DJ Pro (schematic view)

- Mixxx User Forum

New in version 2.2.5.

Compatibility

This controller is USB MIDI class compliant, so it is plug-and-play on all platforms without having to install any special drivers. The manufacturer's page only mentions Windows and Mac but it's confirmed working on Linux as well.

Controller Mapping
Fig. 24: ION Discover DJ Pro (deck section)

Deck section

No.	Control	Function
1	JOG WHEEL	Scratches the track
2	PLAY/PAUSE button	Plays/pauses a track in the respective Deck
3	CUE button	While playing: go to cue point, while stopped: set cue point
4	SYNC button	Sync the tempo to other playing track
5	SCRATCH button	Toggle the scratch mode
6	TEMPO slider	Adjust the track playing speed
7	PITCH BEND buttons -/+	Lower (-) or Raise (+) the pitch temporarily
8	REVERSE PLAY button	Hold for reverse play
9	BASS/MID/TREBLE knobs	Adjust the low/mid/high-frequency regions of the song
10	MUTE buttons	Mute low/mid/high-frequency regions

Mixer section

No.	Control	Function
1	Channel faders	Adjust the output level for each channel
2	Cross fader	Fades between left and right deck.
3	A CUE / B CUE buttons	Sends the selected channel's audio to the headphone output
4	LOAD A / LOAD B buttons	Load the selected library track to deck A / B
5	CUE VOLUME knob	Control the output volume of the headphones output
6	BROWSE knob	Browse the library
7	MASTER VOLUME knob	Control the output volume of the master output

Known Issues

Controls not yet working:

- STUTTER button

- ALL MUTE button

- AUTOLOOP buttons

- iPod dock

17.1.54 Keith McMillen QuNeo

- Manufacturer's product page

Keith McMillen QuNeo is a USB multi purpose pad controller and features tactile pads, sliders, rotary sensors and switches. Works with USB, MIDI or OSC and will communicate most music software environments right out of the box.

Features

- 27 pads, sliders and rotary sensors are pressure, velocity, and location sensitive. Even the 17 switches respond to how hard you press.

- LED Light Feedback - variably diffusive elastomers with 251 multi-color LEDs, 16 square pads provide 127 levels of Velocity response, X-Y location and continuous pressure.
Fig. 25: ION Discover DJ Pro (mixer section)

- 2 rotary sensors allow you to scrub, trigger, stretch, pinch and play phrases and sound files, manipulate continuous controllers and more .

- Each rotary sensor measures angle, pressure and distance from the center.

- 9 touch sensitive sliders can thomann be mapped to fader and effects controls.

- LEDs within each slider act as VU meters.

- QuNeo is the size of an iPad (V1) and can fit in iPad accessories such as mic clips, stands and more.

- Advanced users and programmers can use the development kit and API to create their own code to respond to QuNeo's sensor data. Hack away to control your world in ways never before possible!

New in version 1.11.

Mapping Description
Fig. 26: Keith McMillen Quneo (schematic view)

The mapping is included with the QuNeo installer, make sure to click the "Mixxx" check box when prompted during the installation. Alternatively download the Installer from www.keithmcmillen.com. The MIDI mapping goes with QuNeo's factory preset number 12. To change the factory preset, select the blue MODE button on the device and press tab #12. Also see Youtube - Setting up Mixxx with QuNeo.

It turns QuNeo into a full fledged DJ controller using Mixxx. It includes controls for 2 players: play, sync, cue, tempo controls, crossfading, scratching, and various volume controls accessible from QuNeo.

17.1.55 Kontrol DJ KDJ500

- Forum thread

New in version 1.10.

Note: Unfortunately a detailed description of this controller mapping is still missing. If you own this controller, please consider contributing one.

17.1.56 Korg Kaoss DJ controller

2-deck controller with touch controlled jogwheels, built-in 4-channel soundcard and a Korg Kaoss Pad as built-in effect section (can be switched off for using software effects).

- Manufacturer's product page
- Forum thread
- Pull request on Github

New in version 2.1.

Mapping
Fig. 27: Korg Kaoss DJ (schematic view)

No.	Name	Function	Shifted Operation
1	Headphone knob	Adjusts the headphone level	
2	Balance knob	Adjusts the balance between the master level and the headphone monitor level	
3	Master knob	Adjust the master volume level	
4	Browse knob	Selects a song from the library	Moves between levels (TODO)
5	Display	Indicates the effect number or parameter	Indicates the key or scale
6	Touchpad Mode Button	Switches the touchpad between the Controller, KAOSS Effect, and Sampler modes (long press for blue LED)	
7	Program/Value Knob	Selects an effect	Selects a key, selects a scale
8	Tap Button	Sets the tempo Long-press this button to access the auto BPM function	Key setting mode
9	Hold Button	Enables/disables the touchpad's hold function	Scale setting mode
10	Touchpad (controller mode)	Controls the effects of the DJ software. The vertical axis controls the mix (dry/wet) knob. The horizontal axis controls the super knob.	Adjusts the Beats Multiplier (TODO)
	Touchpad (Kaoss Effect mode)	Controls the KAOSS effect	Adjusts the depth of the KAOSS Effect
	Touchpad (sampler mode)	Controls the sampler function of the DJ software	
11	Crossfader	Adjusts the balance between Decks A and B	
12	Touch Slider mode button	Switches between the three touch slider mode	
13	Touch Slider (Normal mode)	Left Side: Nudges (pitch -) Center: Enables the touch wheel's Scratch mode Right Side: Nudges (pitch +)	Moves to the specified position in the song (slider)

Table 6 – continued from previous page

No.	Name	Function	Shifted Operation
	Touch Slider (Hot Cue mode)	Left Side: Sets Hot Cue 1, and moves to Hot Cue 1 Center: Sets Hot Cue 2, and moves to Hot Cue 2 Right Side: Sets Hot Cue 3, and moves to Hot Cue 3	Deletes Hot Cue 1 Deletes Hot Cue 2 Deletes Hot Cue 3
	Touch Slider (Loop mode)	Left Side: Auto Loop × 1/2 Center: Loop on/off Right Side: Auto Loop × 2	Sets the Loop In point Auto Loop × 1 Sets the Loop Out point
14	EQ	Boosts or Cuts the Hi EQ Boosts or Cuts the Mid EQ Boosts or Cuts the Lo EQ	
15	Gain knob	Adjusts the gain	
16	Load button	Loads the song into the selected deck	
17	Fx button	Left: FX1 rack mix knob can be manipulated when enabled Right: FX2 rack mix knob can be manipulated when enabled	
18	Headphone cue button	Turns the headphone monitor on/off	Switches the function of the level meter between Deck A/B and the Master level
19	Touch wheel	Scratches (in scratch mode) or adjusts the pitch	Search function (in scratch mode) or moves beatgrid
20	Pitch fader	Adjusts the pitch	
21	Level meter	Indicates the input level to deck A/B or the master level	
22	Shift button	Holding this button provides access to the controllers SHIFT functions	
23	Play / pause button	Starts/pauses the song	Key Lock On/Off
24	Sync button	Synchronizes the tempo of Deck A and Deck B	Cancels tempo synchronization
25	Cue button	Sets the cue point or moves to the cue point	Returns to the beginning of the song.

Table 6 – continued from previous page

No.	Name	Function	Shifted Operation
26	Level fader	Adjusts the level of deck A/B	

17.1.57 Korg nanoKONTROL

This controller has been discontinued in favor of the *Korg nanoKONTROL 2*.

- Forum thread

New in version 1.8.2.

Note: Unfortunately a detailed description of this controller mapping is still missing. If you own this controller, please consider contributing one.

17.1.58 Korg nanoKONTROL2

There are two mappings for this controller included in Mixxx. The one labeled "Korg Nanokontrol 2 (alternative)" takes advantage of features introduced in Mixxx 2.0 such as sync lock and cue modes.

- Manufacturer's product page

- Forum thread

New in version 1.11.

Note: Unfortunately a detailed description of this controller mapping is still missing. If you own this controller, please consider contributing one.

17.1.59 Korg nanoPAD2

New in version 1.11.0.

Note: Unfortunately a detailed description of this controller mapping is still missing. If you own this controller, please consider contributing one.

17.1.60 M-Audio X-Session Pro

This device has been discontinued. M-Audio discontinued its DJ products after the company was bought by inMusic in 2012.

New in version 1.6.

Note: Unfortunately a detailed description of this controller mapping is still missing. If you own this controller, please consider contributing one.

17.1.61 M-Audio Torq Xponent

This device has been discontinued. M-Audio discontinued its DJ products after the company was bought by inMusic in 2012. This device is a class compliant USB audio and MIDI device, so it does not require a special driver on any OS that Mixxx runs on.

New in version 1.6.

Note for Windows users

Typically, the ASIO sound API is the best option on Windows and it requires an ASIO driver from the sound card manufacturer. However, it seems that the current version of the Xponent ASIO driver for Windows interferes with the ability to send MIDI control messages to the Xponent. As a result, if you are running M-Audio's Xponent ASIO drivers on Windows, the lights will not work. If you uninstall the drivers, the lights will work, but you can no longer use the Xponent's sound card with the ASIO sound API.

It is recommended to **use the WDM-KS sound API** instead. The sound card will appear as "Analog Connector 1 (Xponent Audio)" and "Analog Connector 2 (Xponent Audio)". Connector 2 is the main out, and Connector 1 is the headphones. The latency meter seems to run a bit higher than it did under ASIO, so keep this in mind, and test both setups with your own system to see how they compare. If you require low latency as well as a lot of effects or time stretching, you may want to run with the ASIO driver at the expense of the lights.

Note: Unfortunately a detailed description of this controller mapping is still missing. If you own this controller, please consider contributing one.

17.1.62 Miditech Midicontrol

New in version 1.5.2.

Note: Unfortunately a detailed description of this controller mapping is still missing. If you own this controller, please consider contributing one.

17.1.63 Mixman DM2

- Manufacturer's product page (archived)

New in version 1.7.

Note: Unfortunately a detailed description of this controller mapping is still missing. If you own this controller, please consider contributing one.
Fig. 28: Mixman DM2 (schematic view)

17.1.64 MixVibes U-Mix Control (Pro) 2

The MixVibes U-Mix Control Pro 2 is a MIDI DJ controller with an **internal soundcard** and **two Inputs** for Turntables or any Audio-Source with RCA. It offers also a **changeable** Cross-fader, **adjustable** Cross-Fader **Curve** and **individual Touch-Level-Sensors**. The U-Mix Control **Pro** differs only in Cue-Button-Labels The U-Mix Control 2 (without "Pro" = internal soundcard) also. Both should work fine with this MIDI mapping.

- Manufacturer's product page (archived)

- Forum thread

New in version 1.10.1.

Mapping description

- Cross- Volume- and Pitchbend-Slider

- Master, Gain- and EQ-Nobs incl. Kill-Switches, Cue/Master-Mix (Headphone)

- Cue-, Play-, Sync-, Pitchbend-, HotCue-, Headphone, Load A/B-Buttions

- JogWheels (incl. Scratch & Jog)

- MediaKnob

- LEDs

   1. Clipping

   2. EQ-Kill

   3. CUE/PLAY(BPM)/SYNC

4. HotCUEs

5. Headphone (A/B)

6. Load (A/B) - 20 Seconds end of Track

7. Jog (Keylock)

8. Bend

Special Functions

- BPM-Tap: Press "Shift" + "Sync"

- Keylock: Press "Jog"

Currently not working

- Sample-Deck-Management

- Loop-Knob & Loop-Setting

Not MIDI-mappable

- MIC-Level-Control (MIC is hardwired through master output)

- Headphone-Level Control (Level-Adjustment in Mixxx and the Hardware-Nob are independent)

- Touch Level sensitivity (only Hardware)

- C.F. Curve (turn to fully left and change in Mixxx, if needed)

17.1.65 Native Instruments Traktor Kontrol F1

The Traktor Kontrol F1 is a small versatile controller that is intended to be used for remix decks but can easily be repurposed for other uses such as hotcues.

- Manufacturer's product page

New in version 1.11.

Note: Unfortunately a detailed description of this controller mapping is still missing. If you own this controller, please consider contributing one.

17.1.66 Native Instruments Traktor Kontrol S2 MK1

The Native Instruments Traktor Kontrol S2 MK1 is a 2 deck all-in-one controller with an integrated audio interface. It has a pair of balanced 1/4" TRS outputs and a pair of unbalanced RCA outputs which both output the main mix, a 1/4" TRS headphone jack, and a 1/4" TRS microphone input. The microphone input is not digitized and routed internally to the outputs. The Kontrol S2 MK1 can run with only USB bus power and an optional power supply can be connected to make the LEDs brighter and the headphone output louder.

The Kontrol S2 MK1 can be distinguished from the Mk2 by the jog wheels. The S2 MK1 has pressure sensitive jog wheels made of black plastic, while the S2 MK2 has touch sensitive jog wheels made of shiny aluminium; The Kontrol S2 MK3 does not have effects knobs at the top.

New in version 2.3.4.

Compatibility

The Kontrol S2 MK1 is a USB audio and HID class compliant device. It is fully compatible with Linux, Windows, and macOS. No proprietary driver is required on Linux or macOS. For Windows, download and install the latest driver from Native Instruments' website.

Audio routing

Output	Channels
Master	Channel 1 - 2
Headphones	Channel 3 - 4

The microphone is routed internally and is not accessible to Mixxx.

Mapping

Decks

Jog Wheels

Press the top of the jog wheel and turn it to scratch. Move the jog wheel from the edge without pressing the top to nudge the track. Hold SHIFT and spin the jog wheel to seek quickly.

Loop Section

The encoders work differently in Mixxx than in Traktor:

Left encoder
    Turning jumps forward/backwards by the beatjump size. If a loop is enabled, turning moves the loop by the beatjump size. Push and turn to adjust the beatjump size. Turning with SHIFT adjusts the musical key. Pushing with SHIFT resets the key to the track's default.

Right encoder
    Turning halves/doubles the loop size. Turning with SHIFT beatjumps by 1 beat forward/backward, or if a loop is enabled, moves the loop 1 beat forward/backward. Pushing (de)activates a loop. Pushing with SHIFT reactivates a disabled loop, or if a loop is enabled, jumps to the loop in point and stops the deck.

LOOP IN/LOOP OUT buttons
    Manually set the loop in and out points. Press and hold while moving the jog wheel to adjust the loop in or out point.

Top Pad Row

The top pad row has 3 different modes.

Hotcue mode

This is the default mode when Mixxx starts. The pads control hotcues 1-4. Active hotcues light up blue. Press an unlit button to set a new *hotcue*. Press a lit pad to seek to the hotcue. Press a lit pad with SHIFT to delete the hotcue.

Intro & Outro cue mode

This mode is activated by pressing the RESET button above the tempo fader. Pads 1 & 2 are used for the intro start & end cues and light up green. Pads 3 & 4 are used for the outro start & end cues and light up blue.

Sampler mode

This mode is activated by the button under the Sampler knob in the center of the mixer. Press an unlit pad to load the selected track in the library to the sampler. Loaded and stopped sampler pads are lit dim green. Press a dim green pad to play a sampler. A playing sampler is lit green. Press a lit pad with SHIFT to stop a sampler, or if it is already stopped, unload the sample. Looping sampler pads are lit cyan.

Transport Controls

The transport controls work mostly as labeled on the controller:

SYNC button

Press to *sync tempo*. Press and hold to enable sync lock. Press again to disable sync lock. Press with SHIFT to enable sync lock without needing to hold.

CUE button

Behavior depends on the *cue mode set in the Mixxx preferences*. Press with SHIFT to seek the beginning of the track and stop.

PLAY button

Play or pause the deck. Press with SHIFT to toggle key lock.

TEMPO fader

Adjusts the *tempo*.

RESET button

This button toggles the top pad row to the intro/outro cues. Press the button when it is lit to return the top pad row to hotcue mode.

Mixer

Deck Columns

GAIN encoder

Controls the Quick Effect superknob for the deck. With SHIFT, controls gain. Press to reset the Quick Effect superknob. Press with SHIFT to reset gain.

FX 1/FX 2 buttons

Assign the deck to effect units 1 and 2.

HI/MID/LOW knobs

Adjust the high, middle, and low frequencies.

CUE button

Toggle whether the deck is routed to the *prefader headphone output*. With SHIFT, toggle quantize for the deck.

Fader
Control the deck volume.

Center Column

MAIN LEVEL knob
Adjust the volume of the main output. This acts on the controller's audio interface output in hardware, so it is not mapped to the main mix gain knob in Mixxx (otherwise the gain would be applied twice).

SAMPLES knob
Adjusts the gain of samplers 1-8.

SAMPLES ON A/SAMPLES ON B buttons
Toggles the top pad row of the corresponding deck to control samplers. Press when lit to return the pads to controlling *hotcues*.

BROWSE encoder
Scroll through the music library. Turn with SHIFT to scroll a whole page at a time. Push to open/select the highlighted item. Push with SHIFT to cycle through the windows (Track List, Sidebar, search box).

LOAD A/LOAD B buttons
Load the track selected in the library to the corresponding deck. Press with SHIFT to clone the other deck.

LEVEL meters
The meters show the levels for each deck.

Crossfader
Crossfade between the decks.

Effects

The Kontrol S2 MK1 uses the *standard Mixxx effects mapping*.

Front panel

The cue volume knob adjusts the volume of the controller's audio interface in hardware, so it is not mapped to Mixxx (otherwise the gain would be applied twice). The cue mix knob is mapped to Mixxx. The Mic Engage button toggles talkover for Microphone Input 1 in hardware.

17.1.67 Native Instruments Traktor Kontrol S2 MK2

The Native Instruments Traktor Kontrol S2 MK2 is a 2 deck all-in-one controller with an integrated audio interface. It has a pair of balanced 1/4" TRS outputs and a pair of unbalanced RCA outputs which both output the main mix, a 1/4" TRS headphone jack, and a 1/4" TRS microphone input. The microphone input is digitized and available to the computer for recording and broadcasting. The Kontrol S2 MK2 can run with only USB bus power and an optional power supply can be connected to make the LEDs brighter and the headphone output louder.

The Kontrol S2 MK2 can be distinguished from the Mk1 by the jog wheels. The top of the jog wheels on the MK2 are shiny aluminum; the top of the jog wheels on the Mk1 are black. The Kontrol S2 Mk3 does not have effects knobs at the top.

New in version 2.3.

Compatibility

The Kontrol S2 MK2 is a USB audio and HID class compliant device. It is fully compatible with Linux, Windows, and macOS. No proprietary driver is required on Linux or macOS. For Windows, download and install the latest driver from Native Instruments' website.

Audio routing

Output	Channels
Master	Channel 1 - 2
Headphones	Channel 3 - 4

Input	Channels
Microphone 1	Channel 1 - 2

Do *not* configure the *Record/Broadcast* input in Mixxx.

Mapping

Decks

Jog Wheels

Touch the top of the jog wheel and turn it to scratch. Move the jog wheel from the edge without touching the top to nudge the track. Hold SHIFT and spin the jog wheel to seek quickly.

Loop Section

The encoders work differently in Mixxx than in Traktor:

Left encoder
Turning jumps forward/backwards by the beatjump size. If a loop is enabled, turning moves the loop by the beatjump size. Push and turn to adjust the beatjump size. Turning with SHIFT adjusts the musical key. Pushing with SHIFT resets the key to the track's default.

Right encoder
Turning halves/doubles the loop size. Turning with SHIFT beatjumps by 1 beat forward/backward, or if a loop is enabled, moves the loop 1 beat forward/backward. Pushing (de)activates a loop. Pushing with SHIFT reactivates a disabled loop, or if a loop is enabled, jumps to the loop in point and stops the deck.

LOOP IN/LOOP OUT buttons
Manually set the loop in and out points. Press and hold while moving the jog wheel to adjust the loop in or out point.

Top Pad Row

The top pad row has 3 different modes.

Hotcue mode

This is the default mode when Mixxx starts. The pads control hotcues 1-4. The color of the hotcues is shown on the pads. Press an unlit button to set a new *hotcue*. Press a lit pad to seek to the hotcue. Press a lit pad with SHIFT to delete the hotcue.

Intro & Outro cue mode

This mode is activated by pressing the FLUX button above the tempo fader. Pads 1 & 2 are used for the intro start & end cues and light up green. Pads 3 & 4 are used for the outro start & end cues and light up red.

Sampler mode

This mode is activated by the button under the Remix knob in the center of the mixer. Press an unlit pad to load the selected track in the library to the sampler. Loaded and stopped sampler pads are lit white. Press a white pad to play a sampler. A playing sampler is lit magenta. Press a lit pad with SHIFT to stop a sampler, or if it is already stopped, unload the sample.

Transport Controls

The transport controls work mostly as labelled on the controller:

SYNC button

Press to *sync tempo*. Press and hold to enable sync lock. Press again to disable sync lock. Press with SHIFT to enable sync lock without needing to hold.

CUE button

Behavior depends on the *cue mode set in the Mixxx preferences*. Press with SHIFT to seek the beginning of the track and stop.

PLAY button

Play or pause the deck. Press with SHIFT to toggle key lock.

TEMPO fader

Adjusts the *tempo*.

FLUX button

Mixxx does not yet have a very useful flux/slip mode, so instead this button toggles the top pad row to the intro/outro cues. Press the button when it is lit to return the top pad row to hotcue mode.

When slip mode is implemented in Mixxx in the future, this could be changed so SHIFT + FLUX button activates intro & outro mode for the pads.

Mixer

Deck Columns

GAIN|FILTER encoder

Controls the Quick Effect superknob for the deck. With SHIFT, controls gain. Press to reset the Quick Effect superknob. Press with SHIFT to reset gain.

FX 1/FX 2 buttons

Assign the deck to effect units 1 and 2.

HI/MID/LOW knobs

Adjust the high, middle, and low frequencies.

CUE button

Toggle whether the deck is routed to the *prefader headphone output*. With SHIFT, toggle quantize for the deck.

Fader

Control the deck volume.

Center Column

MAIN LEVEL knob

Adjust the volume of the main output. This acts on the controller's audio interface output in hardware, so it is not mapped to the main mix gain knob in Mixxx (otherwise the gain would be applied twice).

REMIX knob

Adjusts the gain of samplers 1-8.

REMIX ON A/REMIX ON B buttons

Toggles the top pad row of the corresponding deck to control samplers. Press when lit to return the pads to controlling *hotcues*.

BROWSE encoder

Scroll through the music library. Push to maximize the library browser on screen. Turn with SHIFT to scroll 5 rows at a time.

LOAD A/LOAD B buttons

Load the track selected in the library to the corresponding deck. Press with SHIFT to unload a track.

LEVEL meters

The meters show the levels for each deck.

Crossfader

Crossfade between the decks.

Effects

The Kontrol S2 MK2 uses the *standard Mixxx effects mapping*.

Front panel

The cue volume knob adjusts the volume of the controller's audio interface in hardware, so it is not mapped to Mixxx (otherwise the gain would be applied twice). The cue mix knob is mapped to Mixxx. The Mic Engage button toggles talkover for Microphone Input 1 in Mixxx.

17.1.68 Native Instruments Traktor Kontrol S2 MK3

The Kontrol S2 MK3 is a two-channel controller with an integrated sound card. It has two integrated stereo outputs (line and 1/8" / 3.5 mm TRS), headphone outputs (1/8" / 3.5 mm TRS) and microphone inputs (1/4" / 6.3 mm TRS). The MK3 uses the standard HID protocol to send and receive signals from a computer, so it can work with Mixxx. The Kontrol S2 MK3 can run from USB bus power, and using a separate power supply has no impact on the output level or LED brightness (as opposed to the MK2).

- Manufacturer's product page

- Mapping forum thread

New in version 2.2.4.

Changed in version 2.3: Unbind Main knob from Mixxx's Main Gain, because it controls the hardware volume.

Mixxx Sound Hardware Preferences

- Main output: channels 1-2

- Headphone output: channels 3-4

Mixxx mapping
Fig. 29: Native Instruments Traktor Kontrol S2 MK3 (schematic view)

Element	Primary function	Secondary function (+ SHIFT)
1. REV Button	Reverse play while held	Reverse play + slip mode while held
2. FLX Button	Enable and disable slip mode	
3. Browse knob **turn**	Scroll vertically in library	Scroll horizontally in library
3. Browse knob **press**	Load selected track into deck	Eject current track
4. Preparation button	Add selected track to AutoDJ queue (bottom)	Add selected track to AutoDJ queue (top)
5. List view button	Toggles maximizing the library	
6. Sync button	Syncs the BPM and phase (depending on quantize). Press longer to activate sync lock on that deck.	Syncs the phase to that of the other track
7. Keylock button	Enable keylock for the deck	
8. Loop knob **turn**	Halve or double loop size	
8. Loop knob **press**	Set a loop of the defined number of beats and enables the loop	Toggles the current loop on or off
9. Samples button	Active sampler mode (for the number buttons)	

continues on next page

Table 7 – continued from previous page

Element	Primary function	Secondary function (+ SHIFT)
10. Hotcues button	Activate hotcue mode (for the number buttons)	
11. Move knob **turn**	Beatjump backwards/forwards	Halve or double beatjump size
11. Move knob **press**	Activates a rolling loop of the defined number of beats. Once disabled, playback will resume where the track would have been if it had not entered the loop	Activate current loop, jump to its loop in point, and stop playback
12. Jog wheels	Control scratching when touched from the top *(Missing: temporarily bend the pitch when touched from the side)*	
13. Grid button	Adjust beatgrid so closest beat is aligned with the current play position	Adjust beatgrid to match another playing deck
14. Shift button	Activates secondary functions when pressed	
15. CUE button	CUE default	If the CUE point is set, jump to it and stops
16. Play button	Toggles playing	Seeks a player to the start and then stops it
17. Number buttons	Function depends on current mode	
Hotcue mode	If hotcue is set, seeks the player to hotcue position. Otherwise set hotcue at current position	Clear the hotcue
Samples mode	Load selected track into corresponding slot. If track is loaded into corresponding slot, go to CUE point and play	If track is playing, CUE default behaviour. Otherwise eject track
18. Tempo fader	Speed control	
19. Quantize button	Toggles quantization for both decks	
20. Gain knob	*Unmapped* (adjusts the hardware gain)	
21. Microphone button	Toggles microphone talkover, long press for permanent activation	
22. Pre-Gain knob	Adjusts the pre-fader gain of the deck	
23. HI knob	High frequency filter	
24. MID knob	Middle frequency filter	
25. LOW knob	Low frequency filter	
26. Effect knob	Quick effect knob for the corresponding deck	
27. Sample knob	Adjusts the pregain for all the sample decks combined	
28. Headphone mix knob	Adjusts the cue/main mix in the headphone output	
29. Headphone gain knob	Adjusts the headphone output gain	

Table 7 – continued from previous page

Element	Primary function	Secondary function (+ SHIFT)
30. Effect buttons	Load preset from the Quick Effect presets list on both decks. 8 first presets from the list can be selected. Press the button once to get the first preset, press twice for the second preset. Press once (Press twice): 1 (5) 2 (6) 3 (7) 4 (8)	Load preset on selected deck
31. Headphone buttons	Toggles headphone cueing	
32. Volume fader	Adjusts the channel volume fader for the corresponding deck	
33. VuMeter LEDs	Show the current instantaneous deck volume	
34. Crossfader	Adjusts the crossfader between both decks	

17.1.69 Native Instruments Traktor Kontrol S3

The Kontrol S3 is an introductory 4 deck controller with good build quality and integrated sound card. This is the first controller released with the "S3" name.

The Kontrol S3 can run from USB bus power. Using the separate power supply increases the brightness of the LEDs, which is helpful for using it in daylight, and increases the volume of the headphone output.

- Manufacturer's product page

New in version 2.3.0.

Compatibility

Controller

The Kontrol S3 is a USB class compliant audio and *HID* device, so it is compatible with Mixxx without any proprietary drivers on GNU/Linux and macOS. On Windows, it is recommended to install the driver from Native Instruments and select the ASIO *sound API* in the *Sound Hardware section of Mixxx's Preferences*.

With the S3 plugged in, the device is listed as an available controller in Mixxx's Preferences. The controller uses HID for the knobs, buttons, and other components on the device, so the mapping can only be loaded when you select the HID device on the left side of Mixxx's Preferences.

Audio Hardware setup

The S3 has a standard 4 channel sound card. You should configure the channels as follows:

Audio Output	Channel Configuration
Main	Channel 1-2
Headphones	Channel 3-4

Audio Inputs

The S3 has two sets of inputs, but only one can be active at a time. There is a set of line-level RCA inputs on the back of the controller, and a combo XLR / 1¼" mic jack on the front. Use SHIFT + EXT to switch between these inputs.

Mapping description

Note that Mixxx doesn't have the concept of a single "leader" deck for sync. Instead, push and hold the SYNC button to "lock" sync on for all decks you want to remain in sync. Or you can push SHIFT + SYNC to lock sync on. Refer to *Sync Lock documentation* for details.

Hint: There are two SHIFT buttons, one for each side of the controller. Make sure you press the SHIFT button on the same side as the control you want to modify.

Mixer

- The GAIN and equalizer HIGH/MID/LOW knobs and the CUE (headphones) button behave as labelled.

- FX Enable, buttons, FX select buttons, and the FX knobs: See Effect section below.

- EXT: The EXT button changes the fourth channel pregain (knob), pfl, and volume (slider) adjustments to operate with the Microphone input. The microphone does not respond to EQ or effects.

- SHIFT + EXT: Switches input sensitivity for the input connectors from Mic to Line and back again.

The Main Volume knob on the S3 controls the volume of the S3's main output in hardware, so it does not affect the software main output gain knob in Mixxx by default. You can hold SHIFT and turn the knob to adjust Mixxx' main output gain. Note that this will still also adjust the hardware gain, so after you release SHIFT you'll need to adjust the knob again.

Peak display is only generated from software. So if you see clipping indicated, lower the gain of the playing decks or use SHIFT + Main Volume knob.

Decks

Control	Description
Library encoder press	Load track selected in library to the deck.
SHIFT + Library encoder press	Eject track.
Small play button	While held, plays the current track in the preview deck. If you rotate the library encoder while you hold the PLAY button, Mixxx will scan through the track being previewed.
Star button	This button is not used.
List-plus button	Adds the current track to the Auto DJ list.
VIEW button	Move focus of library control between left-hand tree and main list.

Transport Mode Buttons

Control	Description
REV	Activates a reverse-roll (aka "censor") effect.
SHIFT + REV	Turns on reverse playback mode.
GRID	Turns on Quantize mode.
FLUX	Turns on Slip mode.
JOG	When on, touching the jog wheels enables Scratch mode.
SHIFT + Wheels	Hold to use the wheels to quickly scroll through the track.

Deck Select Buttons

Pressing a Deck Select button will activate that deck.

Press and hold one Deck Select button, then tap a second Deck Select button to clone the track loaded in the first deck to the second.

Looping

Control	Description
Right Encoder Turn	Double/halve loop size.
SHIFT + Right Encoder Turn	Move loop forward/backward by the beatjump size.
Right Encoder Press	Activate loop of set size from current position, or disable active loop
SHIFT + Right Encoder Press	Toggles the existing loop on and off.
Left Encoder Turn	Beatjump forward/backward.
SHIFT + Left Encoder Turn	Adjust beatjump size.
Left Encoder Press	Activates beatloop roll.
SHIFT + Left Encoder Press	Activates a loop and then stops.

Rate / Keylock

There are two ways the rate sliders can be mapped: Absolute, and Relative. Absolute mode is the default. In this mode, the position of the pitch slider matches the on-screen pitch slider position. If the sliders are misaligned, Mixxx engages "soft takeover mode" – Mixxx won't update the value of the slider until the controller matches the GUI. In Relative mode, moving the slider always adjusts the value of the pitch slider, even if they don't match.

- Absolute Mode:
    - KEYLOCK: Press to toggle keylock mode.
    - SYNC: Press to beatsync, or press and hold to activate Sync Lock Mode.
    - Pitch slider: Adjusts playback speed.
    - SHIFT + Pitch slider: Adjusts musical key
- Relative Mode:
    - KEYLOCK: Press to toggle keylock mode (toggles when releasing the button).
    - SYNC: Press to beatsync, or press and hold to activate Sync Lock Mode.
    - Pitch slider: Adjusts playback speed.
    - Keylock + Pitch Slider: adjusts musical key
    - SHIFT + Pitch Slider: Allows the user to move the slider without any effect.

Button Pads

The grid of 8 buttons have two possible trigger modes: Hotcues, and Samplers.

In Hotcues mode, pressing the number button will set the hotcue if none exists, and activate it if one does. If you hold SHIFT and press a button, it will clear that hotcue.

In Samplers mode, the buttons on the left side of the controller correspond to Samplers 1-8. By default, the buttons on the right side of the controller also correspond to Samplers 1-8. If you edit the javascript file and set *TraktorS3.SixteenSamplers = true;*, the samplers on the right-hand deck correspond to Samplers 9-16. By default, pressing a number button will activate a sample. Pressing the button again will stop sample playback.

You can change this behavior by editing the javascript file to set *TraktorS3.SamplerModePressAndHold = true;*. In this mode, the sample will play while the button is held, and stop when you let go.

In both modes, holding SHIFT and pressing a button will eject the sample if it is not playing, and will rewind the sample back to the beginning if it was playing.

Effects

This mapping has two modes for controlling the Mixer FX section. The default mode emulates the Mixer FX behavior as designed by Native Instruments and focuses on Mixxx's quick effect chains. The second mode is specific to Mixxx and instead provides detailed control over Mixxx's four effect units at the cost of being more complex to use.

Quick Effect Mode (default)

This mode mimics the intended Mixer FX behavior of the S3 by using Mixxx's quick effect chains. The idea is that the Filter and FX 1-4 buttons on the right hand side of the controller's mixer map to the first five quick effect chain presets selected in *Options ▸ Effects*. The Filter button, which is considered to be the default state, is mapped to the first preset in the list, and the other FX select buttons are mapped to the next four presets. Pressing one of these buttons changes the quick effect chain of each of the four channels to the corresponding preset, allowing you to control different effects with the FX knobs. The FX Enable and FX select buttons light up to indicate which effect chains are active and on what channel. Meanwhile, pressing and holding one of the five FX select buttons while pressing one of four channel's FX Enable buttons assigns a quick effect chain preset to that channel without affecting the other channels. This allows efficient use of the controller's limited number of effects controls.

Setup

To make optimal use of this mode, you may want to change the following preferences:

- The very first quick effect chain preset in the quick effect presets list on the same *Options ▸ Effects* page should be set to the Moog Filter preset or another filter preset.

- The next four quick effect chain presets should contain that exact same filter effect, plus another effect. Delays, reverbs, flangers, trance gates, and white noise are some examples of effects that would work well here.

- Switching to a new quick effect chain preset using the Filter and FX 1-4 buttons will load that preset's default values. If the FX knob is not already in the neutral position for the preset, then the FX knob will be put in soft takeover mode and you will need to turn it to match the super knob's new position before you can start using it. This behavior differs from similar setups in other DJ hardware and software.

Controls

Control	Description
Filter/FX 1-4	Change the quick effect chain on all four channels to the first, second, third, fourth, or fifth quick effect chain preset.
Filter/FX 1-4 + FX Enable	Change only one channel's quick effect chain preset without affecting the other channels.
FX Enable	Bypass the channel's quick effect chain.
FX knobs	Change the channel's quick effect superknob.

Multi Effect Mode

Because the S3 has limited effects controls, this FX setup is unusual and a little complex. Each deck has a single effect toggle button and one knob, and on the right-hand side of the mixer there are five buttons, one for each effect chain and one for the QuickEffect. These buttons and knobs are used in different ways depending on how they are pushed, and together allow the DJ to customize all of the effects.

There are three modes that the effect controls can be in: 1. The initial mode is Filter Mode. This mode is indicated when the FX ENABLE buttons have the same colors as the individual decks. This mode is used for adjusting QuickEffects and assigning Effect Chains to decks. 1. The next mode is Effect Chain Edit Mode. This mode is indicated when the FX ENABLE buttons are all the same color as one of the effect buttons. This mode is used for turning individual effects in a chain on and off, and adjusting each effect chain's mix knob. 1. The last mode is Effect Focus Mode. This mode is indicated when FX ENABLE buttons are all the same color as one of the effects, and one of the FX SELECT buttons is blinking. This mode is used for tuning individual parameters in an effect and enabling or disabling effect toggle buttons.

Switching Effect Modes

At any time, you can push the FILTER FX SELECT button to return to Filter Mode. If you get lost, try pusing the FILTER button to start over.

Press any FX SELECT button to enter Effect Chain mode for that number chain. If you press the same FX SELECT button again, you'll return to Filter Mode. Press a different FX SELECT button to enter Effect Chain mode for that other chain.

Press and hold an FX SELECT button, then press a FX ENABLE button to enter Effect Focus mode. The FX SELECT button will start blinking. From left to right, the FX ENABLE buttons will focus on the first through fourth effects in the chain. If you press any FX SELECT button, you'll return to Effect Chain mode.

Soft Takeover

The knobs have Soft Takeover mode enabled, which means you need to turn the physical knob to match the current position of the UI knob before the value will change. If you are wondering why it seems like the values aren't changing, you may need to rotate the knob more.

Assigning Effects

You can assign effect chains to individual decks in Filter Mode. Press and hold FX ENABLE, then press the desired FX SELECT button or buttons. The FX SELECT buttons that are bright are the effect chains that are selected for that deck.

Filter Mode

In Filter Mode the FX knobs control each channel's selected quick effect. By default this is a combined low-pass and high-pass filter, but a different effect can be chosen from the *Options ‣ Equalizer* section or directly from the mixer if supported by the selected Mixxx skin.

Effect Chain Edit Mode

In Effect Chain Edit Mode, the FX ENABLE buttons change color to match the selected FX button. The lights will be dim if the effect is disabled, and bright if it is enabled. Tap the FX ENABLE button to enable or disable the effect. Turn the first three knobs to adjust the meta knob for each effect. The last filter knob adjusts the mix knob for the whole chain. This is to prevent sudden changes in sound when navigating between modes.

Effect Focus Mode

In Effect Focus Mode, the FX ENABLE buttons represent effect button parameters, while the four knobs adjust the first four parameters of the selected effect.

Mapping options

There are a number of user-friendly customizations possible on the S3:

1. Change between the Quick Effect and Multi Effect modes for the Mixer FX section of the controller.

2. Toggle between Absolute and Relative pitch slider mode.

3. Customize the colors for decks A, B, C, and D.

4. Change the Sampler playback mode.

5. Whether wheel touch scratching is on by default, and how sensitive the jog wheel is.

To make these changes, you need to edit to the mapping script file.

1. Open Mixxx Preferences and select the Kontrol S3 in the side list.

2. There will be a box labeled *Mapping Info*, and that box will have a section labeled *Mapping Files*.

3. Select `Traktor-Kontrol-S3-hid-scripts.js`.

4. Either the file should open in an editor, or you should see a file browser window with that file selected. If you see a file browser, right click the file and select an option to edit it.

5. At the top of the file will be short instructions explaining how to edit the file.

Changes you make will take effect as soon as you save the file.

17.1.70 Native Instruments Traktor Kontrol S4 MK2

The Kontrol S4 MK2 is a 4 deck all-in-one controller with a sturdy build quality and integrated sound card. The MK2 has substantial improvements over the S4 MK1, including large multicolor buttons. The MK1 is not supported and cannot be supported because it uses a proprietary communication protocol exclusive to Traktor. The MK2 uses the standard *HID* protocol (also used by keyboards & mice) to send and receive signals from a computer, so it can work with Mixxx. The easiest way to tell the MK1 apart from the MK2 is the appearance of the jog wheel. On the MK1, the top of the jog wheel is black plastic; on the MK2, the top of the jog wheel is shiny aluminum.

The Kontrol S4 Mk2 can run from *USB* power. Using the separate power supply increases the brightness of the LEDs, which is helpful for using it in daylight, and increases the volume of the headphone output.

- Manufacturer's product page

New in version 2.1.

Compatibility

Controller

The Kontrol S4 MK2 is a USB class compliant audio, *HID* and *MIDI* device, so it is compatible with Mixxx without any proprietary drivers on GNU/Linux and MacOS. On Windows, it is recommended to install the driver from Native Instruments and select the *ASIO sound API in the preferences*.

With the S4 plugged in, a MIDI device is listed as an available controller in Mixxx's Preferences. That is the MIDI input/output ports on the back of the S4 for connecting external MIDI gear; no mapping for the S4 will appear in the menu for the MIDI device. The controller uses HID for the knobs, buttons, and other components on the device, so the mapping can only be loaded when you select the HID device on the left side of Mixxx's Preferences.

Timecode vinyl

The phono inputs on the S4 can be used with turntables for timecode vinyl control of Mixxx.

See also:

Read the *Vinyl Control section* for details.

Mapping Description

Push and hold the SYNC button to "lock" sync on for all decks you want to remain in sync. Push SHIFT + SYNC to enable *Sync Lock* for details.

Mixxx does not have remix decks, so the four remix slot buttons control the samplers. There are some more bonus actions that can be accessed by holding SHIFT and pressing certain buttons.

Mixer

Control	Description
FILTER knob	Controls QuickEffect superknob. This controls the Filter effect by default, but a different effect can be chosen in the Equalizer section of Mixxs's Preferences.
SNAP	Toggles library fullscreen
LOOP RECORD	Toggles recording
LOOP RECORDER PLAY	Hold down and press FLUX button on a deck to enable autoslip mode on that deck.
SHIFT + Gain	Up/down will move the beatgrid
LOOP RECORDER PLAY + GAIN	Increase / decrease the BPM of the track by 0.5. Press the encoder to round the track the nearest whole BPM. Best done to fix tracks with the wrong BPM with the pitch fader at 0.
BROWSE encoder	Up/down will browse in the focused library pane. Pressing acts like a double click on the mouse.

GAIN, effects routing, equalizer high/mid/low, and CUE (headphones) behave as labeled.

The Master Volume knob on the S4 controls the volume of the S4's main output in hardware, so it does not affect the software main gain knob in Mixxx. Peak display is only generated from software, however. So if you see or hear clipping, lower the gain of the playing decks; adjusting the main volume knob on the S4 will not help.

Decks

Control	Description
LOAD	Load track selected in library to the deck.
SHIFT + LOAD	Eject track
Small buttons with preview icons	Play a sampler from its cue point. If no track is loaded in the sampler, the track selected in the library will be loaded.
SHIFT + small buttons with preview icons	If sampler is playing, stop it. If sampler is not playing, the loaded track is ejected from the sampler.
1-4 numbered buttons	Set/activate *hotcue*
SHIFT + 1-4 numbered buttons	Clear hotcue
SHIFT + Wheel nudge	Fast search through track when not playing
FLUX button	Enable slip mode (if shift is held down this decreases the range of the BPM slider, if LOOP RECORDER PLAY is held down enter autoslip mode)
RESET button	Reset key (if shift is held down increase the range of the BPM slider

Looping

Control	Description
Right Encoder (turn)	Double/halve loop size. The loop size is shown on the controller. A dot on the right indicates a fractional loop size. Two dots indicates a loop size larger than 99 beats.
Right Encoder (press)	Activate loop of set size from current position
SHIFT + Right Encoder (turn)	Adjust key
SHIFT + Right Encoder (press)	Reset key
Left Encoder (turn)	Beatjump forward/backward by beatjump size (shown on screen but not on controller), or move the loop by beatjump size if there is a loop enabled
Left Encoder (press)	Re-enable a loop that has been set previously. Pressing this before a loop will keep playing until the loop is entered.
SHIFT + Left Encoder (turn)	Adjust beatjump size
SHIFT + Left Encoder (press)	Jump to loop in point, activate loop, and stop playback. This is helpful for preparing to mix a track in with a loop.
IN button	Set loop in point manually. Hold pressed while moving the jog wheel to finely adjust the loop in point.
OUT button	Set loop out point manually. Hold pressed while moving the jog wheel to finely adjust the loop out point.

Effects

The knob on the left of each effect unit controls the mix (dry/wet) knob for all 3 effects in the unit. The other knobs control the metaknobs of the effects. The buttons below the metaknobs control the effect enable buttons. When pressed with shift, they cycle through the available effects. The button below the mix knob toggles whether the effect parameters are showing on screen. This will be expanded in a future update to implement the *Standard Effects Mapping*.

The buttons at the top of each mixer column control which decks are routed to which effects units.

Mapping extras

Autoslip mode: Holding down LOOP RECORDER PLAY and pressing the FLUX on a deck will enable autoslip mode on that deck. Autoslip turns on slip mode automatically before doing certain actions and turns it off after the actions is finished. It works for beat loops, hot cues, and scratching (warning, can have weird effects when scratching).

Mapping options

If you choose, you can edit the controller script and change the Remix Slot buttons to perform loop rolls instead. Also by default, SHIFT + CUE rewinds the track to the beginning but you can change this to a Reverse Roll (or "Censor") effect instead.

Making these changes is still a little awkward and we will be making controller preferences easier to change in the future. For now you'll have to make a small change to the mapping script file. Don't worry, the actual edit only involves replacing a single word in a text file.

1. Open Mixxx Preferences and select the Kontrol S4 in the side list.

2. Select `Traktor-Kontrol-S4-MK2-hid-scripts.js`.

3. Click *Open Selected File*.

4. Either the file should open in an editor, or you should see a file browser window with that file selected. If you see a file browser, right click the file and select an option to edit it.

5. At the top of the file will be short instructions explaining what to do.

17.1.71 Native Instruments Traktor Kontrol S4 MK3

The Kontrol S4 MK3 is a 4 deck all-in-one controller with a sturdy build quality and integrated sound card. Compared to the MK2 and MK1, it also have motorised shiny aluminum jogwheels, screens and a set of pads which can be use for various features.

The S4 MK3 uses the standard *HID* protocol for the Buttons, Knobs, Faders and LEDs, and extends it for the motorized Jog-Wheels. The screens use a USB Bulk transfer. Mixxx doesn't support rendering content for external screens yet. The easiest way to tell the MK3 apart from the other MK1 and 2 are these screens, displace between the "Move" and "Loop" encoder.

The Kontrol S4 Mk3 can run from *USB* power. Using the separate power supply increases the brightness of the LEDs, which is helpful for using it in daylight, and increases the volume of the headphone output.

- Manufacturer's product page

New in version 2.4.

Compatibility

The Kontrol S4 MK3 is a USB class compliant audio and *HID*, so it is compatible with Mixxx without any proprietary drivers on GNU/Linux, MacOS and Windows.

With the S4 plugged in, a HID device is listed as an available controller in Mixxx's Preferences. The controller uses HID for each components on the device, except the screens, so the mapping can only be loaded when you select the HID device on the left side of Mixxx's Preferences.

Controller

Setup audio output

In order to use the audio output of the controller, *Channels 1 - 2* should be set as *Main* and *Channels 3 - 4* should be set as *Headphones*

> **Note:** The master and headphone knobs aren't mapped to Mixxx but instead control the the hardware directly. If you don't use the controller outputs, these knobs won't have any effect.

Known bugs and limitation

Audio

During the development phase, it appears that using other Sound API than *ALSA* would lead the Master VU meter not to work. Furthermore, audio output power would be half as loud as it should be, which can be a problem if you are also using other software, since you audio setting will suddenly become twice as loud. It remains unclear whether or not this was a common issue or if this was specific to the used setup.

Screens

Currently, Mixxx doesn't support controller screen rendering. However, because the screens are technically a different device, it is safe to interact with them outside of Mixxx while the device is being used by Mixxx. This can be particularly handy if you want to display some images or text, or even dynamic information.

Motors

Haptic feedback (know as Haptic Drive (TM)) are partially implemented. Supported features include jogwheel tensions and turntable mode but these features remains in beta and may sometime have unexpected behaviours. Since there is no guarantee on the long term effect to the controller of how Mixxx implements these features, they are disabled by default. You can enable them by setting *UseMotors* to *true* in *Mapping options*.

Mapping Description

Jogwheel modes

Jogwheel can be used to control various things, depending of the mode they are in.

1. **Vinyl mode** (*default*): The jogwheel platter can be used for scratch. The jogwheel crown can be used to jog up or down the playback.

2. **Jog mode**: The wheel platter and crown can be used to jog up or down the playback.

3. **Turntable mode**: The wheel behaves as a 33.3 RPM turntable. If the platter or crown are slowed down or speeded up, then it will scratch down or up the track.

> **Warning:** Because this mode relies on Mixxx's scratch mode, if the track has been pitched up, the keylock will be ignored!

> **Note:** This mode is only available if the motor features are enabled. See *Motors* for more details.

4. **Loop in**: The wheel behaves similarly to CDJ. If the platter or crown are turned, it will move back or forth the start of the loop. Additionally, if the loop encoder is used, it will move the all loop back or forth.

5. **Loop out**: The wheel linke for the **loop in** mode, but for the exit of the loop. If the platter or crown are turned, it will move back or forth the end of the loop. Additionally, if the loop encoder is used in the same way than **Loop in** mode.

Here is how to tell what mode is on, depending the current state of the LED:

Mode	Jog	TT	Jogwheel	Others
Vinyl mode	On	Off	Circling while the track is playing/scratching	–
Jog mode	Off	Off	Circling while the track is playing/scratching	–
Turntable mode	Off	On	Circling while the track is playing/scratching	–
Loop in	–	–	The whole circle is blinking	The "Rev" button is blinking
Loop out	–	–	The whole circle is blinking	The "Flx" button is blinking

Here is how to select each mode:

Mode	
Vinyl mode	Press the "Jog" button (while the "Jog" button is off)
Jog mode	Press the "Jog" button wgile in vinyl mode (while the "Jog" button is on)
Turntable mode	Press the "TT" button. Pressing again while restore the Vinyl mode
Loop in	Press SHIFT + REV while a loop is enable
Loop out	Press SHIFT + Flux while a loop is enable

For all modes but "Vinyl" and "Jog", re-selecting the mode will restore the previous one.

Move modes

Moves modes define how the "move" encoder (the one on the left) reacts when used. Here are all the various modes:

1. **Beat** (*default*): The track will jump backward or forward by the number of beats selected. Press before turning to select the number of beats.

2. **Grid**: The track's detected beats will be move forward or backward on the waveform.

3. **BPM**: The track's detected BPM will be increased or decreased.

4. **Keyboard**: The keyboard's keys displayed on pads get moved up or down to display higher or lower keynotes.

Here is how to tell use each modes:

Mode	
Beat	This mode is enable if no other mode are enabled
Grid	This mode is enabled while GRID is maintained pressed
BPM	This mode is enabled while SHIFT + GRID is maintained pressed
Keyboard	This mode is enabled while STEM is maintained pressed

All mapping detail

Button	Action	Lighting
Jogwheel platter	- Scratch when in Vinyl mode and Turntable mode - Jog when in Jog mode - Move loop start when in Loop In mode - Move loop end when in Loop Out mode	- Static light rotation: Vinyl, Turntable or Jog mode on - Ring blinking: Loop in or out mode on
Jogwheel crown	- Jog when in Vinyl mode - Same as wheel platter otherwise	
Flux	- Toggle Slip mode - On shift, set a loop end at the current track position if no active loop, enable loop out wheel mode otherwise	- Steady on: Reverse enabled - Steady on while pressing SHIFT: loop is active - Blinking, but flux steady off while pressing SHIFT: loop in set wheel mode - Blinking, with flux steady on while pressing SHIFT: loop in wheel mode active

Table 8 – continued from previous page

Button	Action	Lighting
Reverse	• Toggle reverse mode • On shift, set a loop in the current track position if no active loop, enable loop out wheel mode otherwise	• Steady on: Flux enabled • Steady on while pressing SHIFT: loop is active • Blinking, with reverse steady on while pressing SHIFT: loop out wheel mode active
Grid	• Set the beatgrid at the current track position (on release, short press) • Enable grid move mode while pressed • Enable BPM move mode while pressed and pressing SHIFT	• On when over a detected beat • Blinking when grid/BPM move is on • Blinking when grid move mode is enabled enabled
Turntable	• Toggle on or off the turntable mode	• On: Turntable mode on, otherwise jog or vinyl
Jog	• Toggle on or off the vinyl mode	• On: Vinyl mode on, otherwise jog or turntable
Deck Select	• Select a deck	• The deck's main color will be the one of the selected deck
Shift	Shift controls for the all controller side, including effect unit	• On or Off
Cue	• Trigger the cue default effect • Start or stop the track while pressing SHIFT • Select the cue as the play mode when in Keyboard move mode	Depends of the cue mode
Play/Pause	• Play/Pause the track • Long press: clone the playing track • SHIFT + Long press: eject track	On if track is playing

continues on next page

Table 8 – continued from previous page

Button	Action	Lighting
Move	- Beat jump forward (right) or backward by the number of selected beats - Increase/Decrease the beats if turned while pressed - Increase/decrease pitch when pressing SHIFT - Move backward/forward the grid when in grid move mode - Increase/decrease BPM when in BPM move mode - Move down/up the keyboard notes when in keyboard move mode	
Loop	- Enable/disable loop when pressed - Reactivate exited loop/exit loop when pressed and shifted - Halve/double the loop size - Move 1 beat backward/forward when shifted - On loop in/out wheel mode: move the loop with precision, left precision if shifted	
Master	- Make the current deck sync leader (on release) - Long press: Enabled/disable full range tempo fader	- Steady on: the deck is sync leader - Blinking: the tempo fader is in full range
Sync	- Toggle the sync mode (on release) - Toggle the keylock (on release) - Long press: copy the BPM of the other deck - SHIFT + Long press: copy the key of the other deck	- On while no shift: Sync is on - On while shift: Keylock is on

continues on next page

Table 8 – continued from previous page

Button	Action	Lighting
Tempo fader	While change the tempo only of the left indicator is either off or of the color of the deck. • If green, it means the fader is out of sync with the software, bringing it down will eventually catch up. • If white, it means the fader is out of sync with the software, bringing it up will eventually catch up.	Deck color: default track speed Green: out of sync (down) Green: out of sync (up)
Hotcues	• Toggle the hotcues page • Shift: toggle the second hotcue page	• Deck color with dim off: Current page isn't related to hotcue • Deck color with dim on: page 1 of hotcue • White: page 2 of hotcue
Rec	Currently unused	
Sampler	• Toggle the sampler page and display samplers on the Using	• Off: Current page isn't related to sampler • On: sampler page is active
Mute	Currently unused	
Stems	• Toggle the keyboard (on release) while press: enable keyboard move mode	• Deck color with dim off: Current page isn't related to keyboard • Deck color with dim on: Keyboard active • Green: keyboard play mode active

Table 8 – continued from previous page

Button	Action	Lighting
Pads	- While in hotcue: - press will activate - SHIFT + press will delete - While in sample: - press will play (load selected track if none are) - SHIFT + press will stop (if playing) or eject - While in keyboard: - will set the key to the selected note - will play from the cue if in keyboard play mode - While in beatlooproll mode: - Will activate a beatlooproll of 1/16, 1/8, 1/4 , 1/2, 1, 2, 4 and 8 beats, or custom size if you have change *BeatLoopRolls* in *Mapping options*	- In hotcue: color of the cue - In Sampler: Dim on, sample is playing dim off sampler is stopped, off no sampler loaded - In keyboard: keyboard color on each note, if Dim on, currently active note - In Beatloop roll: dimed on means a loop rool is active with the given size
FX 1st knob	Master volume/mix of the unit	
FX 2nd knob	- Meta arg of the first selected effect - First arg of the focused effect in effect focus mode	
FX 3rd knob	- Meta arg of the second selected effect - Second arg of the focused effect in effect focus mode	
FX 4th knob	- Meta arg of the third selected effect - Third arg of the focused effect in effect focus mode	

Table 8 – continued from previous page

Button	Action	Lighting
FX 1st button	- Trigger all effect - Trigger all effect - Assign/de-assign effect to master while pressing SHIFT and no focused effect - Exit focused mode while pressing SHIFT and focused effect	- On if all effect are off and not pressing SHIFT - On when effect is attached to master and pressing SHIFT - Blinking in effect focused mode - Blinking in effect focused mode
FX 2nd button	- Toggle (short press) or trigger (long press) third effect if not focused effect or if pressing SHIFT - Toggle first arg (short press) or trigger first arg (long press) of the focus effect if any - Switch to next effect available if no focus effect and SHIFT	- On if effect is active and no focused effect or if pressing SHIFT - On if focused effect parameter is enable
FX 3rd button	- Toggle (short press) or trigger (long press) third effect if not focused effect or if pressing SHIFT - Toggle second arg (short press) or trigger second arg (long press) of the focus effect if any - Switch to next effect available if no focus effect and SHIFT	- On if effect is active and no focused effect or if pressing SHIFT - On if focused effect parameter is enable
FX 4th button	- Toggle (short press) or trigger (long press) third effect if not focused effect or if pressing SHIFT - Toggle (short press) or trigger (long press) third arg on the focus effect if any - Switch to next effect available if no focus effect and SHIFT	- On if effect is active and no focused effect or if pressing SHIFT - On if focused effect parameter is enable

continues on next page

Table 8 – continued from previous page

Button	Action	Lighting
Library knob	- Move up/down in tracklist - Move up/down in tree structure while shifted - Move up/down in the context menu if playlist button is pressed - Zoom in/out the waveform when in grid move mode - Beatjump by 16 beats backward/forward if a track is being previewed using the button - Star down/up the currently playing track while pressing the star button - Sort by next/previous column while pressing the view button - Expand the context-manu item when pressed while pressing the playlist button - Load track when pressed or expand/collapse tree node when shifted (if view button is not pressed) - Inverse the column sorting if view button is pressed	
Preview button	Preview the currently selected track while pressed	
Star button	Change the selected track color on short press (next color, or previous if shifted)	
Playlist button	Open or close a context menu for the currently selected track	On if there is a context-menu open, off otherwise
Mixer FX button	Toggle third effect (short press) or trigger third effect (long press) or assign the quick effect of FX select buttons are pressed	Dim on if the effect is active
FX Select button	Apply effect to all deck on release, if no mixer FX button have been pressed	
Ext	Apply the current gain as default. This will reset the gain knob.	

Looping

Control	Description
Right Encoder (turn)	Double/halve loop size.
Right Encoder (press)	Activate/exit loop of set size from current position
SHIFT + REV (while no loops are	enabled) Set the loop in point. This will reset the loop out point as well.
SHIFT + REV (while a loop is enabled)	Toggle the loop in jogwheel mode. See *Jogwheel modes* for more details.
SHIFT + FLX (while no loops are enabled)	Set the loop out point.
SHIFT + FLX (while a loop is enabled)	Toggle the loop out jogwheel mode. See *Jogwheel modes* for more details.

Mapping options

There are various option that can be used to change some behavior:

Setting	Variable value	Default	Range	Description
Deck colors	*DeckColors*	LEDColors.red,LEDColors.blue,LEDColors.yellow, LEDColors.purple	**All colors as defined in Led-Colors_. Must be four color, separated by a comma**	Define the leading colors for each decks. Note that some buttons have only one color
Sortable column in the library	*LibrarySortableColumns*	LibraryColumns.Artist, LibraryColumns.Title, LibraryColumns.BPM, LibraryColumns.Key, LibraryColumns.DatetimeAdded	**All values defined in** the Mixxx control documentation **separated by a comma**	Define the list of columns on which it possible to sort the library using the library encoder and the view button
Loop In/Out jogwheel sensistivity	*LoopWheelMoveFactor*	50	-500..500 (Recommended)	Define the sensistivity when moving the loop start or end point using the loop jogwheel mode. Negative value will reverse the order
Loop encoder sensistivity	*LoopEncoderMoveFactor*	500	-3000..3000 (Recommended)	Define the sensistivity when moving the loop with the encoder when using the loop jogwheel mode. Negative value will reverse the order
Loop encoder sensistivity (Shifted)	*LoopEncoderShiftMoveFactor*	2500	-5000..5000 (Recommended)	Define the sensistivity when moving the loop with SHIFT + the encoder when using the loop jogwheel mode. Negative value will reverse the order
Color of the tempo led when on low takeover	*TempoFaderSoftTakeoverColorLow*	LEDColors.white	**All colors as defined on line 19**	Define the color of thempo LED when the tempo fader is out of sync, and the actual value is less than on the controller
Color of the tempo led when on high takeover	*TempoFaderSoftTakeoverColorHigh*	LEDColors.green	**All colors as defined on line 19**	Define the color of thempo LED when the tempo fader is out of sync, and the actual value is more than on the controller
Keep transport and play button dimmed when off	*KeepLEDWithOneColorDimedWhenInactive*	true	true/false	Having this setting on will keep LED always dimmed, even when off, although they may not have a matching color with the deck's color
Keep the unselected deck button offrather than show its deck color	*KeepDeckSelectDimmed*	true	true/false	Having this setting on will keep the LED of the unselected deck dimmed instead of off.
Keylock on SHIFT + MASTER instead of SHIFT + SYNC	*UseKeylockOnMaster*	false	true/false	Use SHIFT + MASTER to toggle the keylock instead of SHIFT + SYNC
Make the grid button blink	*GridButton-*	false	true/false	Make the GRID button blinking when the playback goes over a de-

This settings are only useful if you are using haptic feedback features

Setting	Variable value	Default	Range	Description
Number of samples used for jogwheel speed in turntable mode	*TurnTableSpeedSample*	20	1..50	Number of samples used to determine the jogwheel movement when the turntable is on. A higher value will increase precision but latency too, and vice-versa
Define the tension of the jogwheel	*TightnessFactor*	0.5	0..1.0	Define the jogwheel tension. 0 makes it very tight while 1 makes it very loose
Define how much force can the jogwheel use	*MaxWheelForce* 25000		10000..30000 (Recommended, can go up to 60000)	Define how much resistance can the wheel use when its rotation is held

Making these changes is still a little awkward and we will be making controller preferences easier to change in the future. For now you'll have to make a small change to the mapping script file. Don't worry, the actual edit only involves replacing a single word in a text file.

1. Open Mixxx Preferences and select the Kontrol S4 in the side list.

2. Select `Traktor-Kontrol-S4-MK3-hid-scripts.js`.

3. Click *Open Selected File*.

4. Either the file should open in an editor, or you should see a file browser window with that file selected. If you see a file browser, right click the file and select an option to edit it.

5. Starting from the block entitled *USER CONFIGURABLE SETTINGS*, there should be configurable options.

17.1.72 Native Instruments Traktor Kontrol X1

New in version 1.11.0.

Note: Unfortunately a detailed description of this controller mapping is still missing. If you own this controller, please consider contributing one.

17.1.73 Native Instruments Traktor Kontrol Z1

Native Instruments Traktor Kontrol Z1 is a two-deck ultra-compact DJ controller with an integrated 96 kHz / 24-bit sound card. It features stereo sound output using two unbalanced RCA connectors and a standard headphone (1/8" / 3.5 mm TRS) output jack. The controller can be powered directly from the USB bus or by using an external power adapter.

- Traktor Kontrol Z1 product page

- Mixxx forum mapping thread

Compatibility

The Kontrol Z1 is a HID and USB audio class compliant device, which makes it fully compatible with Mixxx. It requires no proprietary drivers when used on Linux or macOS.

For Windows, download and install the latest Traktor Kontrol Z1 audio driver from the manufacturer's website.

> **Warning: Parallel installation of Traktor Pro software on Windows**
>
> If you have a parallel installation of Traktor Pro on Windows, a service called `NIHardwareService.exe` is running in the background, which has control over the LEDs of the Z1.
>
> To make the Z1 work properly with Mixxx, you must either uninstall the Traktor Pro software, or temporarily stop this Windows service. One way to do this is to open a Windows PowerShell terminal as Administrator, and run the following command: `Stop-Service -Name "NIHardwareService"`.

Audio hardware setup

The Z1 has a standard 4-channel sound card. Configure the channels in Mixxx as follows:

Audio output	Channel configuration
Main	Channel 1-2
Headphones	Channel 3-4

Controller overview

Mapping description

All knobs and buttons function in Mixxx as they are labeled and follow the manufacturer's standard mapping. Two secondary track control functions are also available using the Mode button as a modifier. This makes the Kontrol Z1 more usable by itself without other controllers.

No.	Element	Primary function	Secondary function
1	Main knob	Main output volume (hardware function - not mapped in Mixxx)	
2	Cue Vol knob	Headphone output volume (hardware function - not mapped in Mixxx)	
3	Cue Mix knob	Adjusts cue / main mix for the headphone output	
4	Gain knobs	Adjusts pre-fader gain of the deck	
5	Hi knobs	High frequency equalizer knob	
6	Mid knobs	Middle frequency equalizer knob	
7	Low knobs	Low frequency equalizer knob	
8	Filter	FX knobs	Adjusts quick effect superknob for the deck	
9	Filter	FX On buttons	Toggles selected deck quick effect on / off	Start / stop track playback
10	Headphone A / B buttons	Toggles deck headphone cueing on / off	Seek track to cue and stop
11	Mode button	Activates secondary functions when held down	
12	Level A / B meters	Show the current instantaneous deck volume	
13	Volume faders	Adjusts channel volume fader for the corresponding deck	
14	Crossfader	Adjusts the crossfader between both decks	
Fig. 30: *Native Instruments Traktor Kontrol Z1 (schematic view)*

17.1.74 Nintendo Wiimote

The Wiimote is a motion-sensitive wireless game console controller.

- Forum thread

New in version 1.11.

17.1.75 Novation Dicer

- Manufacturer's product page (archived)

- Forum thread

The Novation Dicer is a small controller designed to be placed on the corner of turntables for use with timecode vinyl. They are sold in pairs.

New in version 1.10.

Mapping description

The mapping has all buttons mapped and mimics the overall layout of the DJ Tech Tools Dicer mapping for Traktor.

17.1.76 Novation Launchpad Mini

- Manufacturer's product page

- Forum thread

New in version 2.0.

Note: Unfortunately a detailed description of this controller mapping is still missing. If you own this controller, please consider contributing one.

17.1.77 Novation Launchpad MK1

- Forum thread

New in version 1.11.

Changed in version 2.1.

This device is not USB MIDI class compliant. Its signals are translated to MIDI by special drivers on Windows and Mac OS X. There is no driver available for Linux. It has been discontinued in favor of the *Novation Launchpad MK2* which is USB MIDI class compliant and has RGB pads.

Note: Unfortunately a detailed description of this controller mapping is still missing. If you own this controller, please consider contributing one.

17.1.78 Novation Launchpad MK2

Novation Launchpad MK2 is an updated versions of the Launchpad. It introduces new features such as RGB, velocity sensitive pads, and a redesigned layout scheme.

New in version 2.1.

Note: Unfortunately a detailed description of this controller mapping is still missing. If you own this controller, please consider contributing one.

17.1.79 Novation Twitch

New in version 2.1.

Note: Unfortunately a detailed description of this controller mapping is still missing. If you own this controller, please consider contributing one.

17.1.80 Numark DJ2GO

- Manufacturer's product page

New in version 1.10.

Note: Unfortunately a detailed description of this controller mapping is still missing. If you own this controller, please consider contributing one.

17.1.81 Numark DJ2GO2 Touch

The Numark DJ2GO2 Touch is a USB *MIDI* controller with an integrated audio interface. It is the successor to the DJ2GO2, and features touch capable wheels.

- Manufacturer's product page
- Mapping Forum Thread

New in version 2.3.1.

Audio Setup

The mapping relies on the following channel assignments:

Output Channels	Assigned to
1-2	Master
3-4	Headphones
Fig. 31: Numark DJ2GO2 Touch (schematic view)

Controller Mapping

Decks

No.	Control	Function
2	HEADPHONES	Routes deck to headphones output
6	LOAD	Loads a track into the deck.
7	LEVEL	Hi / low pass filter effect.
9	PAD MODE	Switches between modes of operation for pad buttons on both decks.
10	Jog Wheel (top surface)	Perform scratch operation.
10	Jog Wheel (outer edge)	Rotate to lower/raise playback speed and pitch.
11	PLAY/PAUSE	Plays or pause the song.
12	Pads	4 buttons which can be used to control various features.
13	CUE	Specifies, plays or recalls temporary cue point.
14	SYNC	Match tempo and phase of other deck.
15	Tempo slider	Adjust song playback speed.

Pads

The pad mode is changed using the PAD MODE button.

Pad Mode	Function
CUES	Set cue points, and trigger them by clicking. Clear cue points by clicking while holding the PAD MODE button.
AUTO	Enable / disable beat loops, with pads 1, 2, 3, and 4 creating 1, 4, 8, and 16 bar loops respectively.
MAN-UAL	Set a custom loop: pad 1 sets the loop in point, pad 2 sets the loop out point, pad 3 enables / disables the loop, and pad 4 stops the loop and returns to the beginning.
SAM-PLER	Load / trigger sample tracks.

Mixer / Library

No.	Control	Function
3	CUE LEVEL	Adjusts the cue output level.
4	MASTER LEVEL	Adjusts the master output level.
5	Browse encoder	Scroll in the track list. Preview tracks when clicking on a track in a tracklist, scrolling the encoder allows seeking the previewed track. Clicking when a track is being previewed will stop the preview, allowing you to scroll the tracklist again.
8	Crossfader	Fades between left and right deck.

Inputs / outputs

No.	IO	Function
1	USB	Micro USB slot for data / power connection to the Mixxx host device.
16	Main (3.5mm)	Master audio output for the onboard interface.
17	Headphones (3.5mm)	Headphones audio output for the onboard interface.

17.1.82 Numark iDJ Live II

The Numark iDJ Live II is a budget MIDI controller similar to the *Discover DJ <ion-discover-dj>*. It does not have a built in sound card, so a *splitter cable* or a *separate audio interface* is required to use headphones with it.

   • Manufacturer's product page

New in version 2.3.0.

Compatibility

This controller is USB *MIDI* class compliant, so it is plug-and-play on all platforms without having to install any special drivers.

Button mapping

Most of the mapping is self-explanatory and matches up to labels in the Mixxx *GUI*. The mapping script only handles the jog wheels and scratch button, so you can remap everything else using the learning wizard if you'd like.

Play/Cue/Sync buttons

Despite their appearance, the cue buttons don't seem to have LEDs. Only the play and sync buttons do.

The "SET" buttons set the cue point and the arrow buttons jump to the cue point. They do not change behavior depending on whether the track is playing or paused.

Jog wheels and scratch button

The scratch button in the middle changes the mode of the jog wheels. When the scratch LED is off, you can use the wheels to adjust the pitch of a playing track, or to quickly search through a paused track. The search mode moves exactly 32 beats for each revolution of the jog wheel.

Browse knob

The browse knob scrolls through your library, and the 1 and 2 buttons below it load a track into the corresponding deck. Pressing down on the Browse knob toggles fullscreen library view.

17.1.83 Numark Mixtrack

This controller as the same as the *Numark Mixtrack Pro* but without a built-in sound card. It has been discontinued and succeeded by the *Numark Mixtrack 3*.

- Manufacturer's product page

- Forum thread

New in version 1.8.2.

Mapping Description

1. USB cable

2. Channel Treble

3. Channel Mid

4. Channel Bass

5. Cue: send the corresponding track to the headphones

6. Cue Gain: adjust audio level of cue channel

7. Cue Mix: adjust mix between Cue and Audio out in the headphones.

8. Browser Knob: help browse through your collection without using a mouse or trackpad

9. Back: takes you up one level in your file hierarchy

10. Load A/Load B: Load the highlighted track to the corresponding Deck

11. Channel faders: control the volume of each channel

12. Master fader: adjust the output volume of mixxx

13. Crossfader

14. Jog Wheels (see below for details)
Fig. 32: Numark Mixtrack (schematic view)

15. Scratch mode (see below for details)

16. Play/Pause

17. Stutter: press while music is playing to jump back to the cue point

18. CUE: plays from the cue point if hold. When released, jumps back to the cue point

19. SYNC: automatically matches the corresponding Deck's tempo to the other Deck's tempo

20. Pitch Faders

21. Pitch Bend: when pressed, the pitch will adjust -/+4%, when released, the tempo will set back to the right one

22. Keylock

23. View: dynamically set cue point for Deck A

24. Tick: dynamically set cue point for Deck B

25. Eq Kill Switches

26. Effect On/Off: turn on/off the flanger effect

27. On Deck A: control the Flagner's LFO (unassigned on Deck B)

28. On Deck A: control the Flagner's Depth and delay (unassigned on Deck B)

29. Loop Mode: press to alternate between manual or autolooping

   - Manual Looping

      - In: set loop start

      - Out: set loop end

– Reloop: exit or reenter loop

- Auto Looping

    – 1/2 X: divide loop length by 2

    – 1 Bar: make a loop of just one bar (the current one)

    – 2 X: multiply loop length by 2

The Jogs

Not in scratch mode

When not in scratch mode, touching the jogs won't pause the song. Turning them will slightly adjust the tempo, which will resume slowly to its speed. This slowness to resume is somehow equivalent to what you would expect from drivebelt turntables. I hate it, and I have not found a way to correct it… This is why I mostly mix using the pitch bend buttons, which allow for an instant resume to the "pitch slider assigned" pitch for the track.

In scratch mode

In scratch mode, touching the jogs will pause the song. The jogs are very sensitive, and allow for scratching and launching tracks on a given moments when "cueing them in your headphones". Be very careful with this: never remain in scratch mode if not needed, you will touch the jogs by error and put your tracks out of sync because one has pause, or worse, produce a "blank".

Known problems

- The pitch on the controller has a very short run. Thus, having it configured as a +10/-10 (or more) is tricky because you will get a very low pitch precision. Configuring it as +8/-8 (Mk2 style) is highly recommended

- The autolooping functions, although implemented are quite flawed. The "loop one bar", which is present since the 1.0b version, is making a loop between two bars, which are rarely fitted on real "measures". As of mixxx 1.9, there is no possibility to adjust the bars to make them fit perfectly to the tempo

- Pressing play while "cue previewing" should start the track for real, CDJ style. This is not implemented yet, and is marked as a TODO in Mixxx code, so it is unlikely to get implemented on the controller mapping side. *NOTE: If you use the mapping included with the software, this feature is supported. Controls in this mapping are different than the community made one, so be careful.*

- Final remark on the hardware design: be very, very careful not to press the "Load A" or "Load B" button, instead of the corresponding track's "cue" button. They are very near, the error is easy and produces the most dire effect in a party: an awful blank !

17.1.84 Numark Mixtrack Platinum

- Manufacturer's product page

- Forum thread

The Numark Mixtrack Platinum is a 2 channel (with 4 channel layering) entry level DJ controller with an integrated audio interface. The stand out feature of the Mixtrack Platinum is the LCD displays integrated into the jog wheels. It is a USB Audio and MIDI Class compliant device and works with Linux, macOS, and Windows.

New in version 2.2.

Audio interface

Configure Mixxx's main output for channels 1-2 and Headphones output for Channels 3-4.

The microphone input on this controller is not available to the computer through the controller's audio interface. It is mixed with the main output in hardware, so this controller's audio interface is not suitable for broadcasting or recording the inputs. If you want to use the controller for broadcasting or recording, a separate *audio interface* with a microphone input is suggested.

Configuration Options

Configuration options can be set in the mapping. You will need to edit the values below at the very top of the JavaScript file `Numark-Mixtrack-Platinum-scripts.js` and save changes. Allowed values are "true" or "false" unless specified.

- **EnableWheel:** if true, wheel/vinyl mode will be enabled by default (defaults to true)

- **ShowTimeElapsed:** if true, time elapsed will be show by default on the displays, otherwise time remaining will be displayed (defaults to true)

- **UseManualLoopAsCue:** if true, the manual loop controls will behave as hotcues 5-8. When enabled, the normal loop control behavior can be activated using shift+pad mode+mode button and pad mode+mode to use the hotcue behavior (defaults to false)

- **UseAutoLoopAsCue:** if true, the auto loop controls will behave as hotcues 5-8. When enabled, the normal loop control behavior can be activated using shift+pad mode+mode button and pad mode+mode to use the hotcue behavior (defaults to false)

- **UseCueAsSampler:** if true, the hotcues will control sampler slots 5-8 when sampler mode is active. When enabled, the normal hotcue control behavior can be activated using shift+pad mode+sampler while pad mode+sampler will activate the special behavior (defaults to false)

- **ShiftLoadEjects:** if true, pressing shift + load will eject a track (defaults to false)

Mapping

1. **Browse Knob:** Rotate this knob clockwise to scroll down, counter clockwise to scroll up. Press the Knob to load tracks into the inactive deck, expand entries in the library view, and select playlists and crates.
Shift + Turn: Page down/page up, allows you to scroll by page instead of by item.
Shift + Push: Focus next library pane, allows you to toggle between the left and right panes.

2. **Master Gain:** Adjusts the main volume in the software.
Fig. 33: Numark Mixtrack Platinum (schematic view)

Note: This control does not affect the microphone volume which is summed with the final output of the Main Gain to the Main Output. Use the Mic Gain knob to control the microphone volume.

3. **Cue Mix:** Adjusts the software's audio output to the headphones, mixing between the cue (PFL) output and the main mix output.

4. **Cue Gain:** Adjusts the volume for headphone cueing in the software.
Shift+Cue Gain: adjust the volume of the first 8 sampler banks

5. **VU Meter:** Monitor the volume levels of the main output and each channel. When cue/pfl is active on ANY channel, the meter shows the mono levels each channel (left meter shows the deck on the left, right meter for the deck on the right). Otherwise the meter shows the stereo levels of the main output.

6. **Load:** Press one of these buttons while a track is selected in the library window to assign it to Deck 1 and 2 (or 3 and 4), respectively, in the software.
Shift + Load: Load the track and play (or if the ShiftLoadEjects option is set, eject the track)

7. **Gain Knobs:** Adjust the gain of the deck.
Shift + Gain: Adjust parameter 2 of the currently focused effect on this deck.

8. **High EQ Knobs:** Adjust the volume of the high frequencies of the deck.
Shift + High: Adjust parameter 3 of the currently focused effect on this deck.

9. **Mid EQ Knobs:** Adjust the volume of the mid frequencies of the deck.
Shift + Mid: Adjust parameter 4 of the currently focused effect on this deck.

10. **Low EQ Knobs:** Adjust the volume of the low frequencies of the deck.

Shift + Low: Adjust parameter 5 of the currently focused effect on this deck.

11. **Filter:** Adjusts the amount of the filter effect. Turning the knob left controls the low pass filter; turning it right controls the high pass filter. The effect applied here can be configured (the Quick Effect option in the Equalizer preferences).

Shift + Filter: With no effect focused, this controls the Superknob of the effects unit. With an effect focused, this adjusts parameter 1 of the currently focused effect on this deck.

12. **Cue/PFL/Headphones:** Sends pre-fader audio to the headphone output. If any channels have the cue button active, the VU meter will show channel output levels instead of main output levels on all decks.

13. **Volume fader:** Adjusts the volume of the deck.

14. **Crossfader:** Controls the blend between the two decks.

15-16. **Pitch Bend Down/Up:** Press and hold to momentarily reduce the speed of the track.

Shift + Pitch Bend: adjust the key of the playing track up or down. Press both buttons to reset the key.

Pitch Bend Up + Pitch Bend Down: toggle keylock

17. **Pitch Fader:** Adjust the speed of the music (activate keylock to adjust tempo without affecting pitch). Note that moving the fader down *increases* speed, as marked by the "+" at the bottom of the fader on the controller. This can be reversed in Mixxx's preferences under Interface > Speed slider direction.

18. **Touch Strip:** Use the Touch Strip to adjust the deck's Effect Unit Superknob. When an effect is focused, the touch strip controls that effect's meta knob.

Shift + Touch Strip: search through a track's timeline

19. **Beats Knob:** Adjusts the Dry/Wet mix of the deck's Effect Unit.

20. **FX 1 On/Off:** Toggle FX 1 of the deck's Effect Unit

Shift + FX 1: Cycle to the next effect.

Hold + FX 1: Enable this effect in instant mode, after the button is released the effect will be disabled again.

Tap + FX 1: Focus this effect to allow adjusting its metaknob with the touch strip.

21. **FX 2 On/Off:** Toggle FX 2 of the deck's Effect Unit

Shift + FX 2: Cycle to the next effect.

Hold + FX 2: Enable this effect in instant mode, after the button is released the effect will be disabled again.

Tap + FX 2: Focus this effect to allow adjusting its metaknob with the touch strip.

22. **FX 3 On/Off:** Toggle FX 3 of the deck's Effect Unit

Shift + FX 3: Cycle to the next effect.

Hold + FX 3: Enable this effect in instant mode, after the button is released the effect will be disabled again.

Tap + FX 3: Focus this effect to allow adjusting its metaknob with the touch strip.

23. **Tap BPM:** Press this button several times on beat to manually enter a new BPM. The software will ignore the track's BPM and follow your manually entered tempo.

24. **Wheel button:** If active you can use the platter/jog wheel to grab and move the audio, scratching the track like a vinyl record.

Shift + Wheel: Toggle elapsed time or time remaining on the deck's display.

25. **Platter/Jog Wheel:** If Wheel is enabled, touching the platter will result in vinyl scratching, when disabled, nothing will happen and the entire jog wheel behaves as if the side was touched.

Touch side: Pitch bend (nudging) if track is playing

Shift + Touch platter: Quickly scroll through the track

Shift + Touch side: Beat jump

26. **Jog Wheel Display:** The display is fully functional with this mapping. It will display the position of the spinner, play position, bpm, and keylock status.

27. **Deck Switch:** Allows switching between decks 1/3 and 2/4.

28. **Shift:** Allows alternate options to be activated for various controls.

29. **Sync:** Set the BPM of this deck to match the opposite deck. **Press:** Press once to synchronize the tempo (BPM) to that of to that of the other track

Long Press: Enable *Sync Lock*. Press again to disable.

Shift + Sync: Toggle quantize mode.

30. **Cue (Transport Control):** Behavior depends on the *cue mode* set in the Mixxx preferences.

Shift + Cue: return the play head to the start of the track and stop the deck.

31. **Play/Pause:** Starts and stops playback.

Shift + Play/Pause: stutter the track from the last set cue point. If a cue point has not been set, the play head will return to the start of the track.

32. **Pad Mode:** Hold this button to see the currently selected pad mode, while holding select between Manual Loop, Auto Loop, and Sampler modes. Additionally control of hotcues 5-8 can be activated using shift+pad mode+loop mode (either manual or auto loop). Setting either of the **UseManualLoopAsCue** or **UseAutoLoopAsCue** options will reverse the selection of hotcue vs loop mode when shift is held.

Pad Mode+Manual Loop: set the top row of pads to manual loop control mode (see below)

Pad Mode+Auto Loop: set the top row of pads to auto loop/loop roll control mode (see below)

Pad Mode+Sampler: set the top row of pads to sampler control mode (see below)

Shift+Pad Mode+Manual Loop: set the top row of pads to control hotcues 5-8 (see below)

Shift+Pad Mode+Auto Loop: set the top row of pads to control hotcues 5-8 (see below)

Shift+Pad Mode+Sampler: set the bottom row of pads to control sampler banks 5-8 (see below)

33. **Performance Pads:**

The top row of pads is for controlling loops and samples. To select a mode, hold down the Pad Mode button and press one of the upper pads. An LED under the pad section indicates the currently selected mode. See the subsections below for details about each mode.

The bottom row of pads is used to trigger hotcue points. If a hotcue point has not already been set for the loaded track, this control will mark the hotcue point. If a hotcue point has already been set, this control will jump to it.

Shift + Hot Cue: Deletes the assigned hotcue point

Note: the top row can be made to control hotcues 5-8 using shift+pad mode+loop mode (being Auto Loop or Manual Loop). This can also be made the default using a config option (see documentation above and below).

Manual Loop Mode

Hold Pad Mode and press the pad marked Manual Loop (silkscreened above the pad) to assign the upper 4 pads to the functions listed below:

- **Loop In** – Sets the beginning of a loop: When assigned, the Pad LED will light blue

- **Loop Out** – Sets the end point for the loop: When assigned, the Pad LED will light blue

- **On/Off** – (De)activate the loop. If a loop has not been set, this button will have no effect.: When assigned, the Pad LED will light blue

- **Loop x1/2** – Halve the length of the loop. Press Shift + Loop x1/2 to double the length of the loop. Note that this does not update the beatloop size shown on screen.

If Manual Loop is selected with Shift and Pad Mode held down this will activate control of hotcues 5-8 on the upper row instead of the looping controls. Select Manual Loop again while holding Pad Mode to restore the default behavior. There will be no indication of which mode is selected (beyond the LEDs on the keys themselves, which will vary depending on loop and hotcue status). The **UseManualLoopAsCue** config option can be set in the mapping file (see above) to swap the default "shadow" mode of the looping controls such that hotcue control will be the default and manual loop control with be selected when Shift is used.

Auto Loop Mode

Hold Pad Mode and press the pad marked Auto Loop to assign the upper 4 pads to the functions listed below:
* **Auto 1:** – Sets and starts playback of a 1-beat autoloop.

- **Auto 2:** – Sets and starts playback of a 2-beat autoloop.

- **Auto 3:** – Sets and starts playback of a 4-beat autoloop.

- **Auto 4:** – Sets and starts playback of a 8-beat autoloop. * **Shift + Auto 1:** – When held, starts a 1/16-beat loop roll.

- **Shift + Auto 2:** – When held, starts a 1/8-beat loop roll.

- **Shift + Auto 3:** – When held, starts a 1/4-beat loop roll.

- **Shift + Auto 4:** – When held, starts a 1/2-beat loop roll.

Note: loop rolls activate slip mode so the play position continues to advance normally, such that when the loop is released, play continues from the place it would have been if no loop had been activated.

If Auto Loop is selected with Shift and Pad Mode held down this will activate control of hotcues 5-8 on the upper row instead of the looping controls. Select Auto Loop again while holding Pad Mode to restore the default behavior. There will be no indication of which mode is selected (beyond the LEDs on the keys themselves, which will vary depending on loop and hotcue status). The **UseAutoLoopAsCue** config option can be set in the mapping file (see above) to swap the default "shadow" mode of the looping controls such that hotcue control will be the default and auto loop control with be selected when Shift is used.

Sample Mode

Hold Pad Mode and press the pad marked Sampler to enter sampler mode (hold down shift as well to control slots 5-8 using the hotcue buttons). A press of any of the sample buttons will load a sample if the sampler is not loaded. Shift + sample pad will unload a sample if it is not playing. Pressing a pad when a sample is loaded will play the sample, pressing shift + sample pad while a sample is playing will stop it.

Use **shift+cue gain** to adjust the volume of the sampler. When switching to the pad mode to sampler, hold down shift to control slots 5-8 using the hotcue buttons.

Note: the 8 sample slots on each deck all control the same 8 slots in Mixxx no matter which deck the sampler is active on. This is because the controller sends the same MIDI codes for button presses on each side, so there is no way for Mixxx to tell whether a sampler button was pressed on the left or right side of the controller.

17.1.85 Numark Mixtrack Pro

This is the same as the *Numark Mixtrack* with the addition of an integrated sound card. This product has been discontinued and succeeded by the *Numark Mixtrack Pro 3*.

- Manufacturer's product page

New in version 1.8.2.

Mapping Description
Fig. 34: Numark Mixtrack Pro (schematic view)

1. **USB:** This USB connection sends and receives control information to/from a connected computer.

2. **CHANNEL TREBLE:** Adjusts the high (treble) frequencies of the corresponding channel.

3. **CHANNEL MID:** Adjusts the mid-range frequencies of the corresponding channel.

4. **CHANNEL BASS:** Adjusts the low (bass) frequencies of the corresponding channel.

5. **CUE:** Sends pre-fader audio to the Cue Channel for headphone monitoring.

6. **CUE GAIN:** Adjusts the audio level of the Cue channel.

7. **CUE MIX:** Turn to mix between Cue and Program in the Headphone channel. When all the way to the left, only channels routed to CUE will be heard. When all the way right, only the Program mix will be heard.

8. **BROWSE KNOB:** Turn this knob to scroll through lists of tracks / library. When a file is selected, press the knob to load the currently highlighted song into the first stopped deck.

9. **BACK:** This button will switch the Browse Knob to scroll into the track list (FILE LED will illuminate) or into the library section (FOLDER LED will illuminate).

10. **LOAD A / LOAD B:** Press one of these buttons while a track is selected to assign it to Deck A or Deck B, respectively. ***Only if the track is paused. Put the pitch in 0% at load***(without mattering where the slider is).*

11. **CHANNEL FADER:** Adjusts the audio level on the corresponding channel.

12. **MASTER FADER:** Adjusts the output volume of the Program mix.

13. **CROSSFADER:** Blends audio playing between Decks A and B. Sliding this to the left plays Deck A and sliding to the right plays Deck B.

14. **JOG WHEEL:** When the deck is playing, the JOG WHEEL will bend the track's pitch. When the SCRATCH button is on, touching the top of the JOG WHEEL will scratch the selected track **(can do backspin effect)**, and touching the border of the JOG WHEEL will bend the track's pitch. When the deck is not playing, rotating the JOG WHEEL will scan through the track.

15. **SCRATCH:** Turns Scratch Mode on or off. If Scratch Mode is on, the button will light up and the JOG WHEEL will scratch like a turntable when you spin it.

16. **PLAY / PAUSE:** Starts or resumes playback if the Deck is paused. Pauses playback if the Deck is playing. LED ON when playing. LED OFF when stopped.

17. **STUTTER:** Adjust BeatGrid in the correct place (useful to sync well). ***LED Blink at each Beat***of the grid.*

18. **CUE:** The CUE button will return and pause the track at the last set cue point. For temporary play of the cue point, you can hold down the CUE button. The track will play for as long as the button is held down and will return to the cue point once it has been released (Until it has been pressed PLAY before release CUE, then playback will continue). LED ON when stopped. LED OFF when playing. ***LED Blink at each Beat in the last 30 seconds of song. *Don't set Cue accidentally at the end of the song (return to the latest cue).**

19. **SYNC:** Automatically matches the corresponding Deck's tempo and phase with the other Deck. ***If the other deck is stopped, only sync tempo (not phase). *LED Blink at Clip Gain***(Peak indicator).* *******Pressing DELETE***before SYNC: Set Pitch to 0%.*

20. **PITCH FADER:** Controls the track's playback speed. An LED next to the fader will light up when set at 0%. *** Pitch slide are inverted, to match with the screen***(Up: +, Down: -, otherwise is very confusing).* ******* Soft-takeover to prevent sudden wide parameter changes***when the on-screen control diverges from a hardware control. The control will have no effect until the position is close to that of the software, at which point it will take over and operate as usual.*

21. **PITCH BEND (+ / −):** Press or hold down either of these buttons to temporarily adjust the track's playback speed. When released, the track playback will return to the speed designated by the PITCH FADER.

22. **KEYLOCK:** This feature allows you to change the speed of the song without changing the key.

23. **HOT CUE BUTTONS (1-3):** Assigns a Cue Point or returns the track to that Cue Point. When a HOT CUE BUTTON is unlit, you can assign a Cue Point by pressing it at the desired point in your track. Once it is assigned, the HOT CUE BUTTON will light. To return to that Cue Point, simply press it. ***Pressing DELETE** before HOT CUE: Clear Hotcue.

24. **DELETE:** Press this to enable second functions to some buttons (LED on). On having pressed another button, it is deactivated and LED turn off. Combinations: **Delete + EFFECT:** Brake Effect (maintain pressed). Flanger Delay (Left. EFFECT CONTROL): Adjust the speed of Brake. **Delete + HOTCUE:** Clear Hotcue. **Delete + RELOOP:** Clear Loop. **Delete + MANUAL:** Set Quantize ON (for best manual loop) or OFF. **Delete + SYNC:** Set Pitch to 0%.

25. **EFFECT:** Activate / deactivate Flanger. SELECT modify the Depth and LEFT. EFFECT CONTROL change the Delay. ***Pressing DELETE** before EFFECT: Brake (maintain pressed). Adjust Speed with Flanger Delay (Left. EFFECT CONTROL).

26. **EFFECT SELECT:** Modify the Depth of Flanger effect, which will be displayed in the software.

27. **LEFT EFFECT CONTROL:** Modify the Depth of Flanger effect, which will be displayed in the software. ***Used for change the speed of Brake effect too. RIGHT EFFECT CONTROL:** Gain control of the deck (up to clip).

28. **MODE:** Press this to switch between Autoloop Mode and Manual Mode, which changes the functions of the LOOP CONTROL buttons. ***Pressing DELETE** before MODE: Set Quantize ON (for best manual loop), or OFF. **Autoloop Mode (LED ON):** • 1/2 X: Press this to halve the length of the loop. • 1 BAR: Press this to set a 4 beat loop automatically and enable it (LED ON). **Press again to exit loop**. • 2 X: Press this to double the length of the loop. **Manual Mode (LED OFF):** • IN: Press this to set a "Loop In" point where your loop will begin (LED ON). • OUT: Press this to set a "Loop Out" point where your loop will end, and enable it (LED ON). • RELOOP: If the Deck is already looping when you press it (LED ON), exit loop. If not, jump to the start of the loop and enable it. (If no loop is set, nothing will happen.) ***Pressing DELETE** before RELOOP: Clear Loop.

29. **OUTPUT 1** (RCA): This stereo RCA connection will output the main mix from your computer. Please use a stereo RCA cable to connect this output to a powered speaker or amplifier system.

30. **OUTPUT 2** (RCA): This stereo RCA connection will output the Cue Channel from your computer for monitoring purposes. Please note that the Cue Channel is also output through the HEADPHONES output on the front panel.

31. **HEADPHONES:** This stereo 1/4" output will output the signal being routed to the Cue Channel.

32. **MIC GAIN:** This knob controls the microphone level being sent to the main mix.

33. **MIC THROUGH:** This is a 1/4" microphone input. The signal from this input will be sent directly to the main mix.

Known problems

- The pitch on the controller has a very short run. Thus, having it configured as a +10/-10 (or more) is tricky because you will get a very low pitch precision. Configuring it as +8/-8 (Mk2 style) is highly recommended.

- Each slide/knob needs to be moved on Mixxx startup to match levels with the Mixxx UI.

17.1.86 Numark Mixtrack (Pro) 3

- Manufacturer's product page
- Manufacturer's User Manual
- Forum thread

The Numark Mixtrack 3 and Numark Mixtrack Pro 3 are the same controller except that the Pro version has an integrated 4 channel output sound card and costs $50 more. If you use the non-Pro version, you would need a *splitter cable* or *separate audio interface* to be able to preview tracks in headphones.

The microphone input on the Pro version is not available to the computer through the controller's sound card. It is mixed with the main output in hardware, so this controller's sound card is not suitable for broadcasting or recording the inputs. If you want to use the controller for broadcasting or recording, getting the non-Pro version with a separate *audio interface* with a microphone input is suggested.

New in version 2.1.

Configuration options

Configuration options can be set in the mapping. You will need to edit the values below at the very top of the JavaScript file "Numark-Mixtrack-3-scripts.js" and save changes. Allowed values are "**true**" or "**false**" unless specified.

- **TrackEndWarning**: whether the Wheel button flashes near the end of a track
- **iCutEnabled**: whether to enable iCut with the jog wheel. See *#platter/jog wheel* section for details
- **fastSeekEnabled**: whether to enable fast seeking with the jog wheel. See *#platter/jog wheel* section for details
- **smartPFL**: When the Load button is used, the Cue/PFL button is automatically activated on the deck being loaded and deactivated on the other deck
- **beatlooprollActivate**: Use beatlooproll (slip mode loop) instead of beatloop command when using pads in Autoloop mode
- **DarkMetalSkin**: Specify if Dark Metal skin is used for your installation. This is required in order for Expand Library feature to work properly.
- **FXMode**: Select FX Mode based on skin used:
  - value "**1**": (Deere skin): Each deck is assigned its own Effect Unit with 3 effects per deck (e.g. Deck 1 = Effect Unit 1, Deck 2 = Effect Unit 2, etc…\
  - value "**2**": (other skins): FX button 1 = Effect Unit 1, Effect 1, FX Button 2 = Effect Unit 2, Effect 1, FX button 3 = Effect Unit 3, Effect 1. Effect settings are shared by each deck.\
- **PitchBendOnWheelOff**: allow nudge with wheel when wheel is not active.
- **noPlayOnSyncDoublePress**: Specify if Play is disabled on Sync button Double Press.
- **ShiftFilterFX4**: Specify Shift+Filter control behavior - FX parameter 4 (true) or Channel Gain (false)

Mapping Description
Fig. 35: Numark Mixtrack (Pro) 3 (schematic view)

1. Browser Knob

Rotate this knob to cycle through tracks in main library window. Press the Knob to expand library view.

SHIFT **+ Turn:** allows selecting Play Lists and side navigation bar items.

SHIFT **+ Push:** opens / closes selected side navigation bar item.

2. Master Gain

Adjusts the main volume in the software.

Note: This control does not affect the microphone volume which is summed with the final output of the main gain to the main output. Use the Mic Gain knob to control the microphone volume.

3. Cue Mix

Adjusts the software's audio output to the headphones, mixing between the cue (PFL) output and the main mix output.

4. Cue Gain

Adjusts the volume for headphone cueing in the software.

5. Load

Press one of these buttons while a track is selected in the library window to assign it to Deck 1 and 2, respectively, in the software.

SHIFT + LOAD: Activates Fader Start mode for the corresponding (PFL Button is then blinking). Fader start guide: In fader start mode, not only you can press the play/pause button to play/pause the track, but if you move up the level fader (the volume fader if you prefer) of the deck, the track will be played and if you close it to zero, the track will be paused.

Configurable option:

If the *smartPFL option* is set to true, the Cue/PFL button is automatically activated on the deck being loaded and deactivated on the other deck.

6. High EQ Knobs

Adjust High frequencies of the deck

SHIFT + HIGH: Adjust parameter 1 of the currently focused effect on this deck.

7. Mid EQ Knobs

Adjust Mid frequencies of the deck

SHIFT + MID: Adjust parameter 2 of the currently focused effect on this deck.

8 Low EQ Knobs

Adjust Low frequencies of the deck

SHIFT + LOW: Adjust parameter 3 of the currently focused effect on this deck.

9. Filter

Adjusts the amount of the filter effect. Turning the knob left controls the low pass filter; turning it right controls the high pass filter.

SHIFT + FILTER: Adjust parameter 4 of the currently focused effect on this deck.

If effect is unfocused then;

SHIFT + FILTER Adjust the gain of the deck.

10. Cue/PFL/Headphones

Sends pre-fader audio to the headphone output

SHIFT + CUE/PFL: Toggle quantize mode

11. Volume fader

Adjusts the volume of the deck

12. Crossfader

Controls the blend between the two decks

13-14. Pitch Bend Down/Up

Press and hold to momentarily reduce the speed of the track.

SHIFT + **PITCH BEND** -/+: Jump 1 beat backward/forward

   - If loop is activated, move loop by beatjump amount instead.

15. Pitch Fader

Adjust the speed of the music (activate keylock to adjust tempo without affecting pitch). Note that moving the fader down *increases* speed, as marked by the "+" at the bottom of the fader on the controller. This can be reversed in Mixxx's preferences under Interface > Speed slider direction

16. Touch Strip

Use the Touch Strip to adjust the deck's Effect Unit Superknob. If Effects are assigned to Instant FX , they will be enabled instantly on touch, and disabled on finger lift.

SHIFT + **Touch Strip**: search through a track's timeline

17. Beats Multiplier

Adjusts the Dry/Wet mix of the deck's Effect Unit

TAP + BEATS: Moves the beat grid left (turn counterclockwise) or right (turn clockwise)

SHIFT + BEATS: Adjust beatjump amount

PADMODE + BEATS: Adjust Sampler Volume. Left beat knob will adjust Samplers 1-4; Right knob will adjust Samplers 5-8

18. FX 1 On/Off

Turns FX1 on and off

SHIFT + FX1: Select from the list of available effects for the respective effect.

PADMODE + FX1: Assign / unassign FX 1 to Instant FX. When assigned to Instant FX, the FX is instantly activated by touching the Strip and stopped when finger is lifted.

TAP + FX1: Focus this effect to allow adjusting its metaknob with the touch strip.

19. FX 2 On/Off

Turns FX2 on and off

SHIFT + FX2: Select from the list of available effects for the respective effect.

PADMODE + FX2: Assign / unassign FX 1 to Instant FX. When assigned to Instant FX, the FX is instantly activated by touching the Strip and stopped when finger is lifted.

TAP + FX2: Focus this effect to allow adjusting its metaknob with the touch strip.

20. FX 3 On/Off

Turns FX3 on and off

SHIFT + FX3: Select from the list of available effects for the respective effect.

PADMODE + FX3: Assign / unassign FX 1 to Instant FX. When assigned to Instant FX, the FX is instantly activated by touching the Strip and stopped when finger is lifted.

TAP + FX3: Focus this effect to allow adjusting its metaknob with the touch strip.

21. Tap BPM

Press this 8 or more times on beat to manually enter a new BPM. The software will ignore the track's BPM and follow your manually entered tempo.

SHIFT + TAP: Toggles deck between deck 1-3 (left side) or deck 2-4 (right side). TAP LED will be RED when deck 3 is active (Left Tap) or deck 4 is active (Right Tap)

TAP + HOTCUE 1: Activates Brake effect

TAP + HOTCUE 2: Activates Spinback effect

22. Wheel button

Activate this button to use the platter/jog wheel to grab and move the audio, scratching the track like a vinyl record.
SHIFT + WHEEL: Toggle slip mode on/off

23. Platter/Jog Wheel

Touch side: Pitch bend (nudging) if track is playing (Wheel On (always) & Wheel Off - if *PitchBendOnWheelOff* configuration option is true) and / track positioning (Wheel On)
WHEEL **On** + **Touch platter**: scratching: touch the platter and move it
WHEEL **Off** + **Touch platter**: If track is not playing, allows positioning the track
SHIFT + WHEEL **Off** + **Touch platter**: fast seek through track
SHIFT + WHEEL **On** + **Touch platter**: iCut mode: simulates a scratch routine with the jog wheel. When the jog wheel is turned back, the crossfader closes; when the jog wheel is turned forward the crossfader will open. As a visual reference, TAP LED and Wheel button LED will be ON.

Configuration Options: The *iCutEnabled* and *fastSeekEnabled* options can be used to turn off iCut and fast seeking. These options may be helpful to avoid accidentally using these features when touching the platter with shift lock on.

24. Shift

Allows multiple control commands to be triggered when pressed first along with other buttons

25. Pad Mode

This is used to change the operation mode of the *top 4 performance pads*. Pressing this button will light the pad indicating the currently active mode (Manual Loop, Auto Loop or Sampler).

26. Sync

Enables BPM syncing between decks.
Short Press: Press once to synchronize the tempo (BPM) to that of to that of the other track
Double Press: press twice QUICKLY to play the track immediately synchronized to the tempo (BPM) and to the phase of the other track, if the track was paused
Long Press (Sync Lock): Hold for at least half of a second to enable sync lock for this deck. Decks with sync locked will all play at the same tempo, and decks that also have quantize enabled will always have their beats lined up. If the Sync Lock was previously activated, it just deactivates it regardless of the Short press/Double Press
SHIFT + SYNC: Toggle Key Lock

Configuration Options: The *noPlayOnSyncDoublePress* option can be used to turn off Play on Sync Double Press.

27. Cue (Transport Control)

Behavior depends on the *cue mode* set in the Mixxx preferences.

SHIFT + CUE: Return the play head to the start of the track.

28. Play/Pause

Starts and suspends playback. If no track is loaded, loads the selected track (if any) and play.

SHIFT + PLAY/PAUSE: Stutter the track from the last set cue point. If a cue point has not been set, the play head will return to the start of the track.

29. Performance Pads

The top row of pads is for controlling loops and samples. To select a mode, hold down the Pad Mode button and press one of the upper pads. An LED under the pad section indicates the currently selected mode. See the subsections below for details about each mode.

The bottom row of pads is used to trigger hotcue points. If a hotcue point has not already been set for the loaded track, this control will mark the hotcue point. If a hotcue point has already been set, this control will jump to it.

SHIFT + HOTCUE: Deletes the assigned hotcue point

Manual Loop Mode

Hold PADMODE and press the pad marked Manual Loop (silkscreened above the pad) to assign the lower 4 pads to the functions listed below:

- **Loop In** – Sets the beginning of a loop: When assigned, the Pad LED will light blue
- **Loop Out** – Sets the end point for the loop: When assigned, the Pad LED will light blue
- **On/Off** – (De)activate the loop. If a loop has not been set, this button will have no effect.: When assigned, the Pad LED will light blue
- **Loop x1/2** – Halve the length of the loop. Press SHIFT + **Loop x1/2** to double the length of the loop. x1/2 button is disabled unless the corresponding deck is set to be quantized

Auto Loop Mode

Hold Pad Mode and press the pad marked Autoloop to assign the lower 4 pads to the functions listed below: When assigned, the respective Pad LED will blink Yellow

- **Auto 1** – Sets and starts playback of a 2-beat autoloop.
- **Auto 2** – Sets and starts playback of a 4-beat autoloop.
- **Auto 3** – Sets and starts playback of a 8-beat autoloop.
- **Auto 4** – Sets and starts playback of a 16-beat autoloop.
- SHIFT **+ Auto 1** – Sets and starts playback of a 1/8-beat autoloop.

- SHIFT **+ Auto 2** – Sets and starts playback of a 1/4-beat autoloop.

- SHIFT **+ Auto 3** – Sets and starts playback of a 1/2-beat autoloop.

- SHIFT **+ Auto 4** – Sets and starts playback of a 1-beat autoloop.

If the pad is held down more than .5 second (Long Press), the Autoloop will be disabled once pad is released. On Short Press, the pad will behave as a normal button (ON on first press, OFF on second press)

Sample Mode

Hold Pad Mode and press the pad marked Sampler to assign the lower 4 pads to the functions listed below. When assigned, the respective Pad LED will blink Purple

Shift + Sample X will play loaded sample, but with Sampler unit Sync disabled

- **Deck 1 - Sample 1** – Plays the sample assigned to Sample Pad 1 with the unit Sync activated.

- **Deck 1 - Sample 2** – Plays the sample assigned to Sample Pad 2 with the unit Sync activated.

- **Deck 1 - Sample 3** – Plays the sample assigned to Sample Pad 3 with the unit Sync activated.

- **Deck 1 - Sample 4** – Plays the sample assigned to Sample Pad 4 with the unit Sync activated.

- **Deck 2 - Sample 1** – Plays the sample assigned to Sample Pad 5 with the unit Sync activated.

- **Deck 2 - Sample 2** – Plays the sample assigned to Sample Pad 6 with the unit Sync activated.

- **Deck 2 - Sample 3** – Plays the sample assigned to Sample Pad 7 with the unit Sync activated.

- **Deck 2 - Sample 4** – Plays the sample assigned to Sample Pad 8 with the unit Sync activated.

If the pad is held down more than .5 second (Long Press), the sampler will be disabled once pad is released. On Short Press, the pad will behave as a normal button (ON on first press, OFF on second press)

- Load sample by selecting track and pressing **Sample X**

- Pressing sample button when sample is already playing goes back to cue and plays

- Shift + sample to stop sample

- Eject sample by TAP + **Sample X**

30. Master Output LEDs

Displays the audio level going to the main output.

17.1.87 Numark Mixtrack Pro FX

Manufacturer's product page · Manufacturer's user manual · Forum thread

New in version 2.3.1.

Overview
See the tables below for controls descriptions.

Misc

#	Name	Function
1	BROWSE (rotate)	Browse library
1	SHIFT + BROWSE (rotate)	Zoom in/out *waveform summary*
1	BROWSE (press)	Switch between tree and track list
1	SHIFT + BROWSE (press)	Select item (collapse/extend tree branch or load track)
2	MASTER	Adjust the volume level of *master output*. Does not affect the microphone volume (adjusted separately with the MIC knob)
3	MIC	Adjust the volume level of microphone input. Note that the microphone input is mixed in hardware, so the corresponding *GUI* knob does not reflect the hardware knob state.
4	CUE MIX	*Head/mix knob*. Adjust the audio output to the headphones, mixing between the cue output and the main mix output
5	CUE GAIN	Adjust the headphone volume
15	Crossfader	Controls the mix between the two decks
23	BPM	Tap repeatedly to enter a new *BPM* on both decks

Deck

Each of those controls exists in both *decks* and affects only the corresponding deck.

#	Name	Function
6	Main level meter	Displays the audio level going to the main output
7	LOAD	Load selected track
7	·· INSTANT DOUBLES (2x LOAD)	Load track from the opposite deck and seek to the same position. Deck cloning must be enabled in Mixxx settings (Settings -> Preferences -> Decks -> Double-press Load button to clone playing track).
8	LEVEL	Adjust the pre-fader, pre-EQ audio level
9	TREBLE	Adjust high frequencies
10	MID	Adjust middle frequencies
11	BASS	Adjust low frequencies
12	FILTER	Adjust the filter effect
13	CUE	*Headphone button*. Toggle sending channel to the cue (headphone) channel
14	Channel fader	Adjust volume level
16	PITCH BEND - (hold)	Temporarily reduce the speed of the track
16	PITCH RANGE (SHIFT + PITCH BEND -)	Change pitch range. Ranges are configurable in the script file, see *Adjustable values* section.
17	PITCH BEND + (hold)	Temporarily increase the speed of the track
17	KEYLOCK (SHIFT + PITCH BEND +)	Toggle *key lock*
18	Pitch fader	Adjust the speed of the track
24	Jog wheel (top)	If scratch mode is enabled (see the SCRATCH button below): scratch If scratch mode is disabled: pitch bend The behavior of jogwheel can be fine-tuned, see the *Adjustable values* section.
24	Jog wheel (edge)	*Pitch bend*
24	SHIFT + jog wheel	Seek track
25	SCRATCH	Toggle scratch mode. Enabled by default.
25	BLEEP (SHIFT + SCRATCH) (hold)	Play the track in reverse, then release to continue playback from a point where the track would have been if it had not been reversed
26	SHIFT	Hold and then manipulate other controls to activate their secondary functions
27	SYNC	If sync lock is disabled: set BPM to the other deck's BPM If sync lock is enabled: disable sync lock
27	SYNC (hold, then release)	Enable *sync lock*
27	SYNC OFF (SHIFT + SYNC)	Toggle *quantization*
28	CUE	If track is playing: stops the track and resets position to the main cue point If playback is stopped: sets the main cue point
28	CUE (hold)	Play the track from main cue point, release to stop playback and return to the main cue point. Playback must be initially stopped on main cue point.
28	SHIFT + CUE	Stop the playback and return to the beginning of the track
29	Play/Pause	Play/pause playback
29	SHIFT + Play/Pause	Toggle reverse playback
35	LOOP	If loop is disabled: enable loop, starting at current position If loop is enabled: disable loop

Table 9 – continued from previous page

#	Name	Function
35	RELOOP (SHIFT + LOOP)	If loop is enabled: jump to loop IN point and stop playback If loop is disabled: enable loop, without moving it
36	1/2	Decrease loop size by half
36	IN (SHIFT + 1/2)	Set the loop IN point
37	x2	Double the loop size
37	OUT (SHIFT + x2)	Set the loop OUT point

Hint: The actual behavior of CUE and Play/Pause buttons depends on Mixxx settings. See *The Mixxx User Interface* for more info.

FX

#	Name	Function
19	BEATS	Adjust FX param 1 of Effect 1 on Effect Unit 1 and 2
19	SHIFT + BEATS	Adjust FX param 2 of Effect 1 on Effect Unit 1 and 2
20	Dry/Wet knob	Adjust the Dry/Wet rate of Effect Unit 1 and 2
21	FX select buttons	See below
22	FX toggle switches	Toggle Effect 1 on Effect Unit corresponding to deck number

FX select buttons have different functions than what is printed on them. Below is the original layout (not used), and two tables presenting button functions (and SHIFT + buttons functions).

Table 10: Original layout of FX select buttons (**not used**)

HPF	LPF	FLANGER
ECHO	REVERB	PHASER

Table 11: FX select/bonus functions buttons

Effect Unit 1 Effect 1 previous FX	Adjust *beatgrid* on deck 1	Effect Unit 2 Effect 1 previous FX
Effect Unit 1 Effect 1 next FX	Adjust beatgrid on deck 2	Effect Unit 2 Effect 1 next FX

Table 12: FX select/bonus functions buttons (SHIFT)

Pitch up on deck 1	–	Pitch up on deck 2
Pitch down on deck 1	–	Pitch down on deck 2

Pitch up/down buttons change pitch by one semitone.

Hint: For more info about Effect Units see *Effects*.

Pads

The 8 pads in each deck have multiple functions, depending on the selected *pad mode*. Default pad mode is *hotcues*. Current mode is selected by pressing one of the buttons above the pads. The button for currently active pad mode is lit up (or blinking, when secondary pad mode is selected - secondary pad modes are: beatjump and sampler 2).

Pads support secondary (shift) actions in most pad modes. 4 bottom pads with "special" functions printed on them (STUTTER, etc.) act the same as the top 4 pads, i.e. don't perform any special functions.

#	Name	Function
30	CUE	Change pad mode to *hotcues*. **Pad press**: set hotcue if not set. If set, go to hotcue position and start playback. SHIFT **+ pad press**: remove hotcue (if set) Pad lights indicate if a particular hotcue is set or not.
30	SHIFT + CUE	Change pad mode to beatjump. **Pad press**: beatjump forwards SHIFT **+ pad press**: beatjump backwards If loop is active, loop is moved forwards/backwards instead. Default beatjump values are: 1/16, 1/8, 1/4, 1/2, 1, 2, value set in Mixxx GUI (4 by default), 8. Values can be adjusted, see the *Adjustable values* section.
31	AUTO LOOP	Change pad mode to auto-loop. **Pad press**: activate auto-loop SHIFT **+ pad press (hold)**: activate beatlooproll. When released, playback will resume where the track would have been if it had not entered the loop. Default auto-loop sizes are: 1/16, 1/8, 1/4, 1/2, 1, 2, 4, 8. Loop sizes can be adjusted, see the *Adjustable values* section.
32	FADER CUTS	Change pad mode to fader cuts This pad mode emulates rapid crossfader movements. **Pad press (hold)**: activate a fader cut. The crossfader will rapidly move in one of the 8 available patterns. The crossfader will return to the position of hardware crossfader after the pad is released. Note: this function is controlled by the hardware or firmware
33	SAMPLE	Change pad mode to sampler 1 (samples 1-8) **Pad press**: play a sample SHIFT **+ pad press**: stop sample playback
33	SHIFT + SAMPLE	Change pad mode to sampler 2 (samples 9-16)
34	Performance pads	Various functions, depending on selected pad mode
34	SHIFT + Performance pads	Various functions, depending on selected pad mode

Adjustable values

There are a few configurable values at the top of the script (`Numark-Mixtrack-Pro-FX-scripts.js`).

Variable	Default value	Description
`pitchRange`	[0.08, 0.16, 1]	For adjusting the range of pitch fader. Pressing PITCH RANGE (SHIFT + PITCH BEND -) cycles through available values. Number of values in the array can be changed without further script modifications. Note that the default (first) pitch range must be also selected independently in Mixxx settings (Settings -> Preferences -> Decks -> Slider range).
`waveformsSynced`	true	This variable should reflect the corresponding Mixxx option (Settings -> Preferences -> Waveforms -> Synchronize zoom level across all waveforms). This affects waveform summary zooming.
`jogScratchSensitivity`	1024	Scratching sensitivity
`jogScratchAlpha`	1/8	For controlling the alpha-beta filter used in scratching
`jogScratchBeta`	1/32	For controlling the alpha-beta filter used in scratching
`jogPitchSensitivity`	10	Jogwheel pitch bend sensitivity
`jogSeekSensitivity`	-10000	Jogwheel seek sensitivity
`enableBlink`	true	Enable blinking of pad mode buttons when in secondary mode (beatjump or sampler 2)
`blinkDelay`	-700	Blinking frequency of pad mode buttons when in secondary mode (in ms)
`autoLoopSizes`	["0.0625", "0.125", "0.25", "0.5", "1", "2", "4", "8"]	Loop sizes for the auto-loop pad mode, each value corresponds to one of the pads.
`beatJumpValues`	["0.0625_", "0.125_", "0.25_", "0.5_", "1_", "2_", "", "8_"]	Beatjump values for the beatjump pad mode, each value corresponds to one of the pads. The empty value ("") means the value set in Mixxx (4 by default). Underscores (_) are needed because of that control, which has one underscore in the name, as opposed to beatjump controls with predetermined values which have two underscores.

Hint: See here for more info about constants used in scratching.

Notes

- Pressing either SHIFT button will cause both decks to shift (e.g. when pressing SHIFT on deck 1 and then some control on deck 2, the secondary function will be executed). This approach was chosen to be consistent with the behavior of hardware - i.e. pressing either SHIFT changes midi codes of some controls on *both* decks.

- SHIFT + TAP does not trigger BPM rescan, as there is no Mixxx control for this action.

17.1.88 Numark Mixtrack Pro II

The Numark Mixtrack Pro II is the successor of *Numark Mixtrack Pro* and features the same hardware with some minor design changes.

- Manufacturer's product page

- Forum thread

New in version 1.11.

Mapping Description

1. Browser Knob

Rotate the knob to cycle through folders and tracks.
Press: Same as Back button.

2. Load

Load the track selected in the library to the deck.

3. Back

Cycles between the file structure and the music library in the software.

4. Shift

Allows multiple control commands to be triggered when pressed and held first along with other buttons.

5. Play/Pause

Starts and suspends playback.
Shift + Play/Pause: Activates *soft start* effect if paused or *brake* effect if playing.

6. Headphone Cue

Sends pre-fader audio to the Cue Channel for headphone monitoring.

7. Cue (Transport Control)

The behavior depends on the *cue mode* set in the Mixxx preferences. **Shift + Cue:** return the play head to the start of the track.

8. Platter/Jog Wheel

This capacitive, touch-sensitive jog wheel controls the audio when the wheel is touched and moved. When the Scratch button is not active, use the wheel to bend the pitch of the track. When the Scratch button is active, use the wheel to grab and move the audio, "scratching" the track as you would with a vinyl record. You can also grab the non-touch-sensitive outer wheel to bend the pitch of the track.

9. Scratch

Controls the behavior of the platters. When not active, the platter will function as Pitch Bend. When active, the platter will have the ability to scratch.

10. Pitch Fader

Controls the tempo (speed) of the individual decks.

11. Pitch Bend -

Press and hold to momentarily reduce the speed of the track.
Shift + Pitch Bend -: Toggles keylock on/off.

12. Pitch Bend +

Press and hold to momentarily increase the speed of the track.
Shift + Pitch Bend +: Changes pitch fader range.

13. Sync

Enables BPM syncing between decks.

14. Effect Control

Adjusts effect metaknobs.

Shift + Effect Control: Selects effect.

15. Beats

Adjusts the Dry/Wet mix of the EffectUnit.

Shift + Beats: Adjust the deck's QuickEffect.

16. Loop In

Function of this button depends on the current Pad Mode.

Shift + Loop In: Sets the current Pad Mode to "Loop Mode".

Loop Mode: Press this pad to set the beginning of a loop.

Sample Mode: Plays the sample assigned to Sampler 1 (left deck) or Sampler 5 (right deck).

Cue Mode: If Hotcue 1 has not already been set for the loaded track, this control will set Hotcue 1 at current position in the track. If Hotcue 1 has already been set, this control will jump to Hotcue 1.

17. Loop Out

Function of this button depends on the current Pad Mode.

Shift + Loop Out: Sets the current pad mode to "Sample Mode".

Loop Mode: Set the end of a loop.

Sample Mode: Plays the sample assigned to Sampler 2 (left deck) or Sampler 6 (right deck).

Cue Mode: If Hotcue 2 has not already been set for the loaded track, this control will set Hotcue 2 at current position in the track. If Hotcue 2 has already been set, this control will jump to Hotcue 2.

18. Reloop

Function of this button depends on the current Pad Mode.

Shift + Reloop: Sets the current pad mode to "Cue Mode".

Loop Mode: Deactivate an active loop. If no loop is active, this will activate the loop and start playback from its Loop In point.

Sample Mode: Plays the sample assigned to Sampler 3 (left deck) or Sampler 7 (right deck).

Cue Mode: If Hotcue 3 has not already been set for the loaded track, this control will set Hotcue 3 at current position in the track. If Hotcue 3 has already been set, this control will jump to Hotcue 3.

19. Loop x1/2

Function of this button depends on the current Pad Mode.

Loop Mode: Half the loop size.

Shift + Loop x1/2 when in Loop Mode: Double the loop size.

Sample Mode: Plays the sample assigned to Sampler 4 (left deck) or Sampler 8 (right deck).

Cue Mode: Toggles Hotcue Delete Mode. Press this button, and then press one of the other pads in the row to delete that Hotcue.

Note: This button is lit when in Hotcue Delete Mode.

20. FX 1 On/Off

Toggle the 1st effect in the unit on/off.

Shift + FX 1: Sets and starts playback of a 1-beat autoloop.

21. FX 2 On/Off

Toggle the 2nd effect in the unit on/off.

Shift + FX 2: Sets and starts playback of a 2-beat autoloop.

22. FX 3 On/Off

Toggle the 3rd effect in the unit on/off.

Shift + FX 3: Sets and starts playback of a 4-beat autoloop.

23. Tap

Allows manual entry of song's BPM by repeated pressing along the beats of the track.

Shift + Tap: Sets and starts playback of a 16-beat autoloop.

Note: This button will blink at each detected beat in the track.

24. Channel Volume

Adjusts the volume of the deck.

25. Master Gain

Adjusts the volume of the main mix coming from the software.
Note: This does not affect the microphone volume. Use the Mic Gain knob to control the microphone volume.

26. Crossfader

Controls the blend between the two decks.

27. High EQ

Controls the treble frequencies for the deck.

28. Mid EQ

Controls the mid range frequencies for the deck.

29. Low EQ

Controls the bass frequencies for the deck.

30. Cue Gain

Adjusts the volume for headphone cueing in the software.

31. Cue Mix

Adjusts the software's audio output to the headphones, mixing between the cue output and the main mix output.

32. Stutter

Press this button while the music is playing to jump back to the last set cue point, creating a "stutter" effect.

17.1.89 Numark N4

The Numark N4 is a 4-deck DJ controller with seamless integration of external devices.

- Manufacturer's product page
- Wiki page

New in version 1.10.

Mapping Description
Fig. 36: Numark N4 (schematic view)

This mapping has some unusual features like per Deck shift buttons and multiple pages of hotcues. An annotated, ready-to-print overlay of this mapping can be downloaded for `DIN A3` and `DIN A4` printers.

Definable Settings

Some settings in the script can be changed by editing them at the top of the script.

searchAmplification Defines the speedup-factor used when using the searchbutton and scrolling.
type: number
range:]0;+∞[

warnAfterTime Time in seconds before the end of the track in which the controller should warn you.
type: number
range: [0;+∞]

blinkInterval Timeinterval for the triangular Leds in ms
type: number
range: [20;+∞[

encoderResolution Percent how much the value changes with each encoder tick
type: number
range:]0;1]

resetHotCuePageOnTrackLoad The Hotcuepage should be reset to 1 when a new Track is loaded into the Deck

type: boolean

range: true or false

cueReverseRoll If [SHIFT]+[CUE] should trigger a reverse_roll

type: boolean

range: true or false

rateRanges An array of rateRanges in percent

type: array

range:]0;3]

Deck

The Deck consists of the jogwheel, play, cue, the topContainer (which hold the eight square buttons and the four encoders), pitchslider, pitchrange, search, keylock, tap, sync and pitchbend ±.

Special Features

The mapping features some peculiar features which might not be discoverable by standard trial-and-error.

Shift

A shift button is bound to its Deck, which means that you can't use the shift button of Deck1 to access a shifted function on any of the other three Decks. Moreover the shiftbuttons can also work as toggle switches instead of pushbuttons (enabled via components.js Button.type.powerWindow). This means that if the shiftbutton is pressed for a longer period than 275ms it will bounce back to its original state (like a regular shift-/pushbutton). If the Button was pressed for a shorter period than 275ms, the button will remain in that state until it is pressed again (like a toggling button).

Hotcues

The four lower buttons of the topContainer are hotcues. They can be changed by using the corresponding Encoder [HOTCUE PAGE]. The current assignment will then be shown for one second in the upper row. Currently up to 4 Pages are supported (with 4 hotcues each).

Controls

Most of these controls behave as expected but they are listed in detail for the sake of completeness anyways.

Play

Default: Starts regular Play.

Shifted: Plays Track in reverse.

Cue

Default: Standard Cue.

Shifted: reverse roll if shift is enabled (plays in reverse end enables slip) otherwise standard cue.

Pitchbend ±

Default: Change rate temporarily.

Shifted: Change rate temporarily small.

Sync

Default: Momentary BPM Sync

* Short Press: Momentary BPM & Phase Sync

  • Long Press: Toggle Sync Lock

Shifted: Toggles magnet (quantize)

Tap

Default: Tap the desired BPM of the Channel

Shifted: ^^

Note: This functionality is broken until #1811 gets merged

Search/Scratch

Default: Enable Scratching (otherwise it just works just like moving the Jog without the platter)

Shifted: Speeds up platter movement for searching within the track

Keylock

Default: Toggles track keylock

Shifted: Syncs Key

Pitch Range

Default: Cycles Through pitchranges

Shifted: ^^

Pitch/Bpm slider

Default: Normal Pitchslider (Down plays faster; can be changed in the global mixxx preferences)

Shifted: ^^

TopContainer

The TopContainer holds four assignable Hotcue buttons, four loop buttons, which can enable FX via Shift, and four Encoderknobs.

Hotcues

Default: set/active Hotcue_X

Shift: clear Hotcue_X

visit#special_featuresfor more info on how these work

Loop In

Default: Presses the Loop In button like in the UI

Shifted: Toggles EffectRack1

Loop Out

Default: Presses the Loop Out button like in the UI

Shifted: Toggles EffectRack2

Loop Here

Default: Creates a loop at the current position of current Loop Size.

Shifted: Toggles Slip

Reloop

Default: De-/Re-activates the last loop

Shifted: Jumps to start of last loop and stops playback there

FX1 Knob

Default: Controls the Super Knob on EffectRack1.

Shifted: Controls the Mix Knob on EffectRack1.

FX2 Knob

Default: Controls the Super Knob on EffectRack2.

Shifted: Controls the Mix Knob on EffectRack2.

Hotcue Page

Default: visit *#special_features* for more info on what this encoder does

Shifted: Double/Halve current Loop Size

Beat Jump

Default: Jump in the direction turned

Shifted: Double/Halve current Beat Jump Size

Mixer

The Mixer features four channels with identical functionality and controls for the library and other miscellaneous features.

Channel

A channel consists of a volume fader, a gain knob, knobs for low,mid,high EQ a Loadbutton and a pflButton. These are internally still part of the Deck which is why the shiftbutton of Deck 1 won't work with the Loadbutton or gainknob of Deck2/3/4.

Volume

Default: Channel Volume

CUE

Default: Channel Pre-Fader-Listening

these work as usual on the N4: Clicking another one deselect all other. Press multiple at the same Time to PFL multiple Channels

BASS

Default: EQ Low

MID

Default: EQ Mid

TREBLE

Default: EQ High

GAIN

Default: Gain
Shifted: QuickEffect1 (Usually Filter)

LOAD

Default: Load Track into Deck
Shifted: Eject Track from Deck

Library

The Library is managed via the Library Encoder. **Any** shiftbutton can be used to access shift functionanly

Turn

Default: Move Library Cursor Vertically

Shifted: Move Focus between panes

sometimes the focus is stuck somewhere (eg when using the searchbox) and is only recoverable with user intervention via a pointing device.

Button Default: Open/Close Folder / Load Item into first available Deck (Context-dependent)

Shift: Maximize Library

Miscellaneous

Crossfader

The Crossfader and its assignment buttons are integrated seamlessly with Mixxx.

Line/PC Input Source

Function as expected: Mutes the corresponding Deck in Mixxx if set to Line.

Crossfader Contour

Normal: Uses the crossfader parameters that were present when the mapping was loaded Scratch: Uses Scratch typical parameters for hard cuts

Cue-Master Mix

Doesn't manipulate the mixxx controls. Make sure the head gain is not zero and the mix is set to 100% PFL

Cue Volume

Make sure its high enough within mixxx

Booth/Gain Volume

Behaves as expected (but doesn't manipulate any mixxx controls).

17.1.90 Numark NS7

This all-in-one controller features motorized jogwheels. This device is not USB MIDI class compliant and requires a special driver which is only available for Windows and Mac OS X. There is no Linux driver. This controller has been discontinued in favor of the NS7III.

- Manufacturer's product page

New in version 1.9.

Note: Unfortunately a detailed description of this controller mapping is still missing. If you own this controller, please consider contributing one.

17.1.91 Numark Omni Control

- Manfacturer's product page

New in version 1.10.

Note: Unfortunately a detailed description of this controller mapping is still missing. If you own this controller, please consider contributing one.

17.1.92 Numark Party Mix

Manufacturer's product page · Manufacturer's user manual · Forum thread

New in version 2.3.4.

Overview

See the tables below for controls descriptions.

Center

#	Name	Function
1	BROWSE (rotate)	Browse library
1	BROWSE (press+rotate)	switch between Library and Sidebar
1	BROWSE (press)	Equivalent to double clicking the currently selected item in Library (see `Go-ToItem` control)
2	LOAD 1 and 2	load currently selected track to Deck 1 or 2
3	MASTER GAIN	Adjust the volume level of *master output*.
4	CUE MIX	*Head/mix knob*. Adjust the cue/main mix in the headphone output.
5	CUE GAIN	Adjust the headphone volume
10	Crossfader	Controls the mix between the two decks. See *Crossfader*

Deck

Each of those controls exists in both *decks* and affects only the corresponding deck.

#	Name	Function
6	GAIN	Adjust the pre-fader, pre-EQ audio level
7	TREBLE	Adjust high frequencies
8	BASS	Adjust low frequencies
9	Channel fader	Adjust volume level
11	CUE	*Headphone button*. Toggle sending channel to the cue (headphone) channel
12	Jog wheel	If scratch mode is enabled (see the SCRATCH button below): scratch If scratch mode is disabled: pitch bend The behavior of the jog wheel can be fine-tuned, see the *Adjustable values* section.
13	SCRATCH	Toggle scratch mode. Disabled by default.
14	Pitch fader	Adjust the speed of the track
15	SYNC	If sync lock is disabled: set BPM to the other deck's BPM If sync lock is enabled: disable sync lock
15	SYNC (hold, then release)	Enable *sync lock*
16	CUE	If track is playing: stops the track and resets position to the main cue point If playback is stopped: sets the main cue point
16	CUE (hold)	Play the track from main cue point, release to stop playback and return to the main cue point. Playback must be initially stopped on the main cue point.
17	Play/Pause	Play/pause playback
18	PADS 1-4	Pads 1-4 function depends on selected mode
19	PAD MODE	Select mode of PADS 1-4
20	MODE LEDs	The 4 pads in each deck have multiple functions, depending on the selected *pad mode*. Default pad mode is *hotcues*. Current mode is selected by pressing PAD MODE. The LED for currently active pad mode is lit up (or all 3 LEDs for effect mode).

Hint: The actual behavior of CUE and Play/Pause buttons depends on Mixxx settings. See *Using Cue Modes* for more info.

Pads

#	Name	Function
18	CUE Mode	set hotcue if not set. If set, go to hotcue position and start playback. Pad lights indicate if a particular hotcue is set or not.
18	LOOP Mode	activate auto-loop. Default auto-loop sizes are: 4, 8, 16, 32. Loop sizes can be adjusted, see the *Adjustable values* section.
18	SAMPLER Mode	button for 4 Samples for each Deck 1-4 and 5-8 (toggle play from start and stop).
18	EFFECT Mode	Pad 1-3 activates effect during press Deck1 of EffectUnit1, Deck2 of EffectUnit2. Pad 4 switches mix mode. Pad light on indicates Dry/Wet mode. Pad Light off indicates Dry+Wet mode.

Adjustable values

There are a few configurable values at the top of the script (`Numark-Party-Mix.scripts.js`).

Variable	Default value	Description
`jogScratchSensitivity`	340	Scratching sensitivity
`jogScratchAlpha`	1/8	For controlling the alpha-beta filter used in scratching
`jogScratchBeta`	1/8/32	For controlling the alpha-beta filter used in scratching
`jogPitchSensitivity`	10	Jog wheel (pitch bend) sensitivity during play
`jogSearchSensitivity`	1/2	Jog wheel (scrub) sensitivity during pause
`autoLoopSizes`	["4", "8", "16", "32"]	Loop sizes for the auto-loop pad mode, each value corresponds to one of the pads.

Hint: See here for more info about constants used in scratching.

Alternative Mappings

I am working on alternative mappings for this controller here: Numark Party Mix Mappings

17.1.93 Numark Total Control

- Manufacturer's product page
- Forum thread

New in version 1.6.

Note: Unfortunately a detailed description of this controller mapping is still missing. If you own this controller, please consider contributing one.

17.1.94 Numark V7

- Manufacturer's product page

- Forum thread

New in version 1.10.

Note: Unfortunately a detailed description of this controller mapping is still missing. If you own this controller, please consider contributing one.

17.1.95 Pioneer CDJ-2000

This is a CD and USB media player that can control Mixxx over USB with MIDI or HID. It can also control Mixxx by playing timecode from a CD or USB drive and running that signal into Mixxx through a sound card.

- Manufacturer's product page

New in version 1.10: Support for *MIDI* mode.

New in version 1.11: Support for *HID* mode.

Note: Unfortunately a detailed description of this controller mapping is still missing. If you own this controller, please consider contributing one.

17.1.96 Pioneer CDJ-350

This is a CD and USB media player that can control Mixxx via USB with MIDI. The device can also send HID signals to computers, but no Mixxx mapping has been made for this device's HID signals. It can also control Mixxx by playing timecode from a CD or USB drive and running that signal into Mixxx through a sound card.

- Manufacturer's product page

- Forum thread

New in version 1.8.2: Support for *MIDI* mode.

Note: Unfortunately a detailed description of this controller mapping is still missing. If you own this controller, please consider contributing one.

17.1.97 Pioneer CDJ-850

This is a CD and USB media player that can control Mixxx via USB with MIDI or HID. It can also control Mixxx by playing timecode from a CD or USB drive and running that signal into Mixxx through a sound card.

- Manufacturer's product page

New in version 1.10: Support for *MIDI* mode.

New in version 1.11: Support for *HID* mode.

Note: Unfortunately a detailed description of this controller mapping is still missing. If you own this controller, please consider contributing one.

17.1.98 Pioneer DDJ-200
Fig. 37: Pioneer DDJ-200 (schematic view)

The Pioneer DDJ-200 is a 2 deck USB and Bluetooth DJ controller designed for WeDJ, djay, edjing Mix and Rekordbox.

- Manufacturer's Product Page
- Manufacturer's User Manual
- Manufacturer's Firmware Update
- Mixxx User Forum

New in version 2.2.5.

Controller Mapping

A schematic drawing with the control numbers that are used here can be found on the specified page in the User Manual in the Links section.

Deck section (p. 8)
Fig. 38: Deck section (p. 8)

No.	Control	Function
1	Jog Wheel (top)	Scratch (move play position)
1	Jog Wheel (outer)	Pitch bend (nudge)
1	SHIFT + Jog Wheel (top)	Scratch (move play position) faster
1	SHIFT (left) + Jog Wheel (outer)	Move track selection in library
2	SHIFT button	Switch function of controls
3	Pad 1 - 8	Set (if empty) or play (if set) hot cue point / loop 1 - 8
3	SHIFT + Pad 1 - 8	Unset / delete hot cue 1 - 8
4	CUE button	Set or play cue point, change cue point with JOG WHEEL (top) + cue point
4	SHIFT + CUE button	Return to cue point and stop
5	PLAY/PAUSE button	Play / pause
6	BEAT SYNC button	Match tempo and phase of other deck, long press to enable master sync
7	TEMPO slider	Adjust track playing speed (can be adjusted via SHIFT + BEAT SYNC)

Mixer section (p. 10)
Fig. 39: Mixer section (p. 10)

No.	Control	Function
1	MASTER button	Toggle main/cue knob of headphones between left and right
1	SHIFT + MASTER button	Toggle between 2- and 4-deck mode
2	HI/MID/LOW knobs	Adjust high/mid/low-frequencies
3	CFX knobs	Turns on the selected effects
4	HEADPHONE CUE 1 button	Toggle headphone pre-fader listening of left deck.
4	HEADPHONE CUE 2 button	Toggle headphone pre-fader listening of right deck.
4	SHIFT (left) + HEADPHONE CUE 1	Load selected track to left deck.
4	SHIFT (left) + HEADPHONE CUE 2	Load selected track to right deck.
4	SHIFT (right) + HEADPHONE CUE 1	Toggle between left deck between 1 / 3 in 4-deck mode (if LED is lit, deck 3 is active). If 4-deck mode is disabled, this behaves the same as SHIFT (left) + HEADPHONE CUE 1.
4	SHIFT (right) + HEADPHONE CUE 2	Toggle between right deck between 2 / 4 in 4-deck mode (if LED is lit, deck 4 is active). If 4-deck mode is disabled, this behaves the same as SHIFT (left) + HEADPHONE CUE 2.
5	Channel faders	Adjust the output level for each channel
6	Transition FX Button	Turns on *AutoDJ*
7	Cross fader	Fade between left and right deck

17.1.99 Pioneer DDJ-400

The Pioneer DDJ-400 is a 2 deck USB controller with an integrated audio interface designed for rekordbox.

- Manufacturer's Product Page

- Midi Mappings

- Hardware Diagram

- Mapping Forum Thread

New in version 2.3.0.

Firmware

Note: The release version of the firmware contains a bug which causes signals from the tempo sliders to be sent without the sliders being touched.

It is therefore highly recommended that you update your controller's firmware.

You can download the latest firmware from the manufacturer's website.

Unfortunately Pioneer only offers a Windows and Mac firmware installer, so to update your controller you will need access to such a machine. Simply download the appropriate file for that OS, attach your device and run the installer.
Fig. 40: Pioneer DDJ-400 (schematic view)

Compatibility

The Pioneer DDJ-400 is USB audio and MIDI class compliant and works with Linux, Windows, and macOS without needing to install any drivers. However, updating the firmware is recommended as described above.

Audio Setup

Configure Mixxx's *sound hardware settings* as follows:

Output	Channel
Main	1-2
Headphones	3-4

Note: It is not possible to record or broadcast input sent from the 1/4" unbalanced TS microphone jack on the controller, as it is not routed back to the computer and cannot be configured as an input device.

Controller Mapping

The schematic drawings used here can be referenced in the manufacturer's manual on the given page number.

Browser section (p. 6)
Fig. 41: Pioneer DDJ-400 (browser section)

No.	Control	Function
1	LOAD buttons	Load track selected in library into deck.
2	Rotary Selector	Press to toggle focus between the library sidebar and associated panels. Turn to move focus up or down.
Fig. 42: Pioneer DDJ-400 (deck section)

Deck sections (p. 6)

No.	Control	Function
1	BEAT SYNC	Press to sync tempo to the other playing track. Hold to enable sync lock.
1	SHIFT + BEAT SYNC	Cycles through tempo ranges: +/-6%, +/-10%, +/-16%, +/-25%
2	CUE/LOOP CALL>	Doubles the current loop size.
2	SHIFT + CUE/LOOP CALL>	Jumps 32 beats forwards.
3	CUE/LOOP CALL<	Halves the current loop size.
3	SHIFT + CUE/LOOP CALL<	Jumps 32 beats backwards.
4	RELOOP/EXIT	Enables/disables currently set loop.
4	shift + RELOOP/EXIT	Jump to loop start, enable loop, and stop playback.
5	OUT	Sets end of loop to the current playback position. If quantize is enabled, it is set to the closest beat. If held during an active loop, sets the new end point when released.
5	shift + OUT	When a loop is enabled, press to adjust the loop's end position with the jog wheel.
6	IN/-4BEAT	Sets start of loop to the current playback position. If quantize is enabled, it is set to the closest beat. If held during an active loop, sets the new start point when released.
6	shift + IN/-4BEAT	When a loop is enabled, press to adjust the loop's start position with the jog wheel.
7	Jog Wheel (top)	Scratch (move play position).
7	Jog Wheel (outer)	Nudge tempo up or down temporarily.
8	HOT CUE mode	Sets pads to *hot cue mode*.
9	BEAT LOOP mode	Sets pads to *beat loop mode*.
10	BEAT JUMP mode	Sets pads to *beat jump mode*.
11	SAMPLER mode	Sets pads to *sampler mode*.
12	TEMPO slider	Adjust playback speed.
13	Performance pads	Functionality differs depending on the pad mode selected by 8-11.
14	PLAY/PAUSE	Play/pauses a track).
15	CUE	Behavior depends on the *cue mode*.

Pad Modes

The pad mode buttons change between different modes in which the performance pads operate. The main pad modes described below are similar to those found in rekordbox.

Note: The secondary pad modes described in the manufacturer's manual (KEYBOARD PAD FX1 PAD FX2 and KEYSHIFT) are not currently implemented by this mapping.

Hot Cue Mode

Bookmark positions in the track and jump to them.
Fig. 43: Pioneer DDJ-400 (hot cue pads)

No.	Control	Function
1-8	Pad (unlit)	Save current position as hot cue.
1-8	Pad (lit)	Jump to hot cue. If the track is stopped, holding the pad will preview the hot cue until the pad is released.
1-8	SHIFT + Pad (lit)	Clear hot cue.

Beat Loop Mode

Press a pad to enable a loop from the current position. Press the pad again to disable the loop. The size of the loop is assigned to the pads as follows:

Table 13: Pioneer DDJ-400 (beat loop sizes)

1/4 beat	1/2 beat	1 beat	2 beats
4 beats	8 beats	16 beats	32 beats

Beat Jump Mode

Press a pad to jump forwards or backwards by the number of beats assigned to the pads below.

Press SHIFT + pad 7 to decrease or SHIFT + pad 8 to increase the jump values by a factor of 16.
Table 14: Pioneer DDJ-400 (beat jump defaults)

1 beat back	1 beat forward	2 beats back	2 beats forward
4 beats back	4 beats forward	8 beats back	8 beats forward

Sampler Mode

Load and play samples from the library. The pads on decks 1 and 2 correspond to the first and second sampler rows in Mixxx respectively.
Fig. 44: Pioneer DDJ-400 (sampler pads)

No.	Control	Function
1-8	Pad (unlit)	Load sample selected in library.
1-8	Pad (lit)	Play a loaded sample. If the sample is already playing, playback starts from the beginning.
1-8	SHIFT + Pad (lit)	Stop a loaded sample from playing. If the sample is already stopped, unload it.
Fig. 45: Pioneer DDJ-400 (mixer section)

Mixer section (p. 8)

No.	Control	Function
1	TRIM	Adjusts deck prefader gain
2	MASTER	Adjusts main output (this is hardware implemented and is not mapped to the software gain in Mixxx).
3	MASTER CUE	Sends main output to headphones (this is hardware implemented and is not visible in the Mixxx interface).
4	EQs (LOW MID HIGH)	Boosts or cuts channel frequencies
5	Channel level indicators	Displays channel levels (before being sent through channel faders)
6	HEADPHONES MIXING	Adjusts between headphone CUE and MASTER levels sent to headphones
7	FILTER	QuickEffect superknob (by default controls a Filter, but this can be changed in the *preferences*)
8	HEADPHONES LEVEL	Adjusts output level from PHONES jack
9	Headphone CUE (Channel)	Turn on to output channel to headphones
9	SHIFT + Headphone CUE	Toggles quantize for the current channel
10	Channel fader	Adjusts channel levels output to main
11	Crossfader	Fade between left and right channels

Effect section (p. 9)

The BEAT FX controls above are mapped to Mixxx's first effect unit as follows:

No.	Control	Function
1	BEAT <	Cycle effect focus leftward
2	BEAT >	Cycle effect focus rightward
3	FX SELECT	Load next effect
3	SHIFT + FX SELECT	Load previous effect
4	Channel select switch	Route deck 1, deck 2 or main mix to effect unit 1
5	LEVEL/DEPTH	Controls the wet/dry mix knob
5	SHIFT + LEVEL/DEPTH	Controls the metaknob of the currently focused effect
6	ON/OFF	Enable/disable the currently focused effect
6	SHIFT + ON/OFF	Disables all effects in the chain and kills the wet/dry mix

Note: Soft takeover is enabled on the LEVEL/DEPTH knob to prevent sudden changes to the wet/dry mix or effect metaknob when changing between the two.
Fig. 46: Pioneer DDJ-400 (effect section)

17.1.100 Pioneer DDJ-FLX4

The Pioneer DDJ-FLX4 is a 2 deck USB controller with an integrated audio interface designed for rekordbox and Serato.

- Manufacturer's Product Page
- Manufacturer's User Manual
- Midi Mappings
- Hardware Diagram
- Mapping Forum Thread

Firmware

The mapping has been created on Firmware version 1.02

Compatibility

The Pioneer DDJ-FLX4 is USB audio and MIDI class compliant and works with Linux, Windows, and macOS without needing to install any drivers.
Fig. 47: Pioneer DDJ-FLX4 (schematic view)

Audio Setup

Configure Mixxx's *sound hardware settings* as follows:

Output	Channel
Master	1-2
Headphones	3-4

Note: It is not possible to record or broadcast input sent from the 1/4" unbalanced TS microphone jack on the controller, as it is not routed back to the computer and cannot be configured as an input device.

Controller Mapping

The schematic drawings used here can be referenced in the manufacturer's manual on the given page number.

Browser section (p. 12)
Fig. 48: Pioneer DDJ-FLX4 (browser section)

No.	Control	Function
1	LOAD buttons	Load track selected in library into deck.
2	Rotary Selector	Press to toggle focus between the library sidebar and associated panels. Turn to move focus up or down.
2	SHIFT + Rotary Selector	Turn to zoom parallel waveform.
Fig. 49: Pioneer DDJ-FLX4 (deck section)

Deck sections (p. 15)

No.	Control	Function
1	BEAT SYNC	Press to sync tempo to the other playing track. Hold to enable sync lock.
1	SHIFT + BEAT SYNC	Cycles through tempo ranges: +/-6%, +/-10%, +/-16%, +/-25%
2	CUE/LOOP CALL>	Doubles the current loop size.
2	SHIFT + CUE/LOOP CALL>	Jumps 32 beats forwards.
3	CUE/LOOP CALL<	Halves the current loop size.
3	SHIFT + CUE/LOOP CALL<	Jumps 32 beats backwards.
4	4BEAT/EXIT	Enables/disables currently set loop.
4	shift + 4BEAT/EXIT	Jump to loop start, enable loop, and stop playback.
5	OUT	Sets end of loop to the current playback position. If quantize is enabled, it is set to the closest beat. If held during an active loop, sets the new end point when released.
5	shift + OUT	When a loop is enabled, press to adjust the loop's end position with the jog wheel.
6	IN	Sets start of loop to the current playback position. If quantize is enabled, it is set to the closest beat. If held during an active loop, sets the new start point when released.
6	shift + IN	When a loop is enabled, press to adjust the loop's start position with the jog wheel.
7	Jog Wheel (top)	Scratch (move play position).
7	Jog Wheel (outer)	Nudge tempo up or down temporarily.
8	HOT CUE mode	Sets pads to *hot cue mode*.
9	PAD FX mode	Not implemented.
10	BEAT JUMP mode	Sets pads to *beat jump mode*.
10	SHIFT + BEAT LOOP mode	Sets pads to *beat loop mode*.
11	SAMPLER mode	Sets pads to *sampler mode*.
12	TEMPO slider	Adjust playback speed.
13	Performance pads	Functionality differs depending on the pad mode selected by 8-11.
14	PLAY/PAUSE	Play/pauses a track).
15	CUE	Behavior depends on the *cue mode*.
16	SHIFT	Used to access secondary functiones of other buttons while being pressed.

Pad Modes

The pad mode buttons change between different modes in which the performance pads operate. The main pad modes described below are similar to those found in rekordbox.

Note: The secondary pad modes described in the manufacturer's manual (KEYBOARD PAD FX1 PAD FX2 and KEYSHIFT) are not currently implemented by this mapping.

Hot Cue Mode

Bookmark positions in the track and jump to them.
Fig. 50: Pioneer DDJ-FLX4 (hot cue pads)

No.	Control	Function
1-8	Pad (unlit)	Save current position as hot cue.
1-8	Pad (lit)	Jump to hot cue. If the track is stopped, holding the pad will preview the hot cue until the pad is released.
1-8	SHIFT + Pad (lit)	Clear hot cue.

Beat Loop Mode

Press a pad to enable a loop from the current position. Press the pad again to disable the loop. The size of the loop is assigned to the pads as follows:

Table 15: Pioneer DDJ-FLX4 (beat loop sizes)

1/4 beat	1/2 beat	1 beat	2 beats
4 beats	8 beats	16 beats	32 beats

Beat Jump Mode

Press a pad to jump forwards or backwards by the number of beats assigned to the pads below.

Press SHIFT + pad 7 to decrease or SHIFT + pad 8 to increase the jump values by a factor of 16.
Table 16: Pioneer DDJ-FLX4 (beat jump defaults)

1 beat back	1 beat forward	2 beats back	2 beats forward
4 beats back	4 beats forward	8 beats back	8 beats forward

Sampler Mode

Load and play samples from the library. The pads on decks 1 and 2 correspond to the first and second sampler rows in Mixxx respectively.
Fig. 51: Pioneer DDJ-FLX4 (sampler pads)

No.	Control	Function
1-8	Pad (unlit)	Load sample selected in library.
1-8	Pad (lit)	Play a loaded sample. If the sample is already playing, playback starts from the beginning.
1-8	SHIFT + Pad (lit)	Stop a loaded sample from playing. If the sample is already stopped, unload it.
Fig. 52: Pioneer DDJ-FLX4 (mixer section)

Mixer section (p. 25)

No.	Control	Function
1	TRIM	Adjusts deck prefader gain
2	MASTER	Adjusts master output (this is hardware implemented and is not mapped to the software gain in Mixxx).
3	MASTER CUE	Sends master output to headphones (this is hardware implemented and is not visible in the Mixxx interface).
4	EQs (LOW MID HIGH)	Boosts or cuts channel frequencies
5	MASTER	Microphone level. Works for microphones connected on the controller and through the controller's line out.
6	Channel level indicators	Displays channel levels (before being sent through channel faders)
7	CFX	QuickEffect superknob (by default controls a Filter, but this can be changed in the *preferences*)
8	Smart CFX	Not implemented
9	Headphone CUE (Channel)	Turn on to output channel to headphones
9	SHIFT + Headphone CUE	Toggles quantize for the current channel
10	HEADPHONES MIXING	Adjusts between headphone CUE and MASTER levels sent to headphones
11	HEADPHONES LEVEL	Adjusts output level from PHONES jack
12	Channel fader	Adjusts channel levels output to master
13	Smart Fader	Not implemented
14	Crossfader	Fade between left and right channels

Effect section (p. 31)

The BEAT FX controls above are mapped to Mixxx's first effect unit as follows:

No.	Control	Function
1	Channel select switch	Route deck 1, deck 2 or both to effect unit 1
2	FX SELECT	Load next effect
2	SHIFT + FX SELECT	Load previous effect
3	BEAT <	Cycle effect focus leftward
4	BEAT >	Cycle effect focus rightward
5	LEVEL/DEPTH	Controls the wet/dry mix knob
5	SHIFT + LEVEL/DEPTH	Controls the metaknob of the currently focused effect
6	ON/OFF	Enable/disable the currently focused effect
6	SHIFT + ON/OFF	Disables all effects in the chain and kills the wet/dry mix

Note: Soft takeover is enabled on the LEVEL/DEPTH knob to prevent sudden changes to the wet/dry mix or effect metaknob when changing between the two.
Fig. 53: Pioneer DDJ-FLX4 (effect section)

17.1.101 Pioneer DDJ-SB

The Pioneer DDJ-SB is an all-in-one 2 deck USB *MIDI* controller with a built in soundcard. Mixxx allows it to control 4 decks.

- Manufacturer's product page

- Forum thread

- GitHub pull request

New in version 2.0.

Drivers

Windows

Windows Vista, Windows 7 and Windows 8 are supported. You can download the latest drivers and firmware from http://www.pioneerdj.com/en/support/software/ddj-sb.

Note: If you're using Windows and have problems getting both sound outputs to work properly, please try using a different Sound *API* in the *preferences*. DirectSound seems to have issues with this controller. WASAPI seems to work fine, as does MME, although only with higher latencies. On Windows 10, only MME works.

Mac OS X & Linux

You don't need any drivers on Mac OS X and Linux.

The controller supports Mac OS X 10.6 and up.

Usage

Library browsing

The controls for library browsing can be found in the center top of the controller.

Control	Function
Rotary knob	Track selection
Load buttons	Loads currently highlighted track to the corresponding deck
Pushing rotary knob	Push: Loads currently highlighted track to the preview deck and plays it. – Release: jump to 30% position – Push again without rotary: Stop preview
Shift + rotary knob	Library section selection
Shift + pushing rotary knob	toggle expanding library section

Switching between decks

Pressing Shift + "Key Lock / Tempo Range" allows the left deck to switch between decks 1 and 3 and the right deck to switch between decks 2 and 4.

Volume, equalizers & filters

Between the decks the usual faders, crossfader and EQ knobs can be found. A filter knob is also available.

Knobs are available for the main and headphones level. These are functional but are not reflected in Mixxx, as they control the controller's soundcard directly.

The filter fade button allows to use the crossfader in an innovative way that fades across songs through filtering instead of fading.

There is no trim/gain knob, but the same effect can be achieved by using the filter knobs while holding shift.

Jogwheels, tempo & vinyl mode

When a deck is paused, the jogwheel allows you to browse through a track. If you want to browse faster, hold shift while using the jogwheel.

When a deck is playing, using the jogwheel allows you to temporarily change the tempo of the playing track. Again, holding shift exaggerates this effect.

The tempo slider allows changing the tempo of each deck. This normally changes the pitch of a track, you can make the pitch stay constant by pressing the "key lock / tempo range" button.

Vinyl mode makes the jogwheels emulate the way turntables work. Vinyl mode can be toggled by pressing the "vinyl / slip" button. Touching the outer plastic ring of the jogwheel will make it behave as with vinyl mode off. Touching the

metal disc simulates touching the vinyl record, so just putting your hand on it will stop the "vinyl". You can scratch in a similar way as with turntables in vinyl mode.

Slip mode

By pressing shift + "vinyl / slip" you can toggle slip mode. When entering slip mode, Mixxx remembers what point exactly of the track should be playing even if, for example, you scratch or make a loop. This allows to return to the original pace of the track.

Pads - lower row

The play and cue pads should be self-explaining. The sync pad toggles sync lock for a deck, which tries to beatmatch the deck with the others, and also syncs the tempo between them, even when the tempo of one deck is changed.

Additional functions can be accessed by holding shift

Control	Function
Shift + play	Plays the track in reverse and enables slipping (see slip mode)
Shift + cue	Brakes the track as if the power of the motor on a turntable was turned off
Shift + sync	Enables quantize mode (this makes most actions, e.g. setting the cue point, fall to the nearest beat)

Pads - hot cue mode

In hot cue mode the upper row of pads control the hotcues. Pressing a pad that is not lit sets a hotcue. Pressing a pad that is lit makes the track jump and play from that hotcue. Pressing a pad while holding shift deletes that hotcue.

You can control a set of 4 more hotcues by pressing shift + hot cue. The hot cue button will start blinking. The pads will behave in the same way, but controlling hotcues 5 to 8.

Pads - auto loop mode

Pressing the pads in auto loop mode will make loops of a specific length measured in beats.

Control	Function
Pad 1	1 beat loop
Pad 2	2 beat loop
Pad 3	4 beat loop
Pad 4	8 beat loop
Shift + pad 1	16 beat loop
Shift + pad 2	32 beat loop
Shift + pad 3	64 beat loop

Pads - manual loop mode

This mode will make the pads control looping in the way labeled on them.

Control	Function
Pad 1	Set loop in
Pad 2	Set loop out
Pad 3	Toggles loop
Pad 4	Halve loop length
Shift + pad 4	Double loop length
Shift + pad 1	Move loop one beat backward
Shift + pad 2	Move loop one beat forward

Pads - sampler mode

In sampler mode the sampler can be controlled. To load a file into a sampler, first press the sampler button while holding shift, so that the sampler button starts blinking. Now pressing a pad will load the currently highlighted track on the library into the corresponding sampler. Pressing a pad while holding shift will eject the sample.

To play samples, press the sampler button without holding shift (it should not blink). Pressing a pad will start playing the corresponding sample, pressing a pad while holding shift will stop it.

Pads - loop roll (shift + auto loop)

By pressing the auto loop button while holding shift (it should start blinking) you can make loop rolls. This mode combines auto loops with slip mode. The pads will start a loop in the current position with a determinate beat length while simultaneously enabling slip mode, so that when releasing the pad the track will continue playing as if the loop never happened.

Control	Function
Pad 1	1/16th beat loop roll
Pad 2	1/8th beat loop roll
Pad 3	1/4th beat loop roll
Pad 4	1/2 beat loop roll
Shift + pad 1	1 beat loop roll
Shift + pad 2	2 beat loop roll
Shift + pad 3	4 beat loop roll
Shift + pad 4	8 beat loop roll

Pads - kill (shift + manual loop)

By pressing the manual loop button while holding shift (it should start blinking) you can make the pads behave as kill switches.

Control	Function
Pad 1	Kill low
Pad 2	Kill mid
Pad 3	Kill high
Pad 4	Mute

Effects

Over the jogwheels there are sections allowing to control effects.

Turning the knobs will control the wet/dryness of an effect.

Turning the knobs while holding one of the three FX buttons will control the first, second or third parameter of an effect, respectively.

If holding shift when using the knobs the "super" parameter can be controlled.

Pressing the central FX button (number 2) while holding shift will toggle the effect for the headphones, while the left and right buttons (number 1 and 3) will toggle the effect for the active deck in the left and right sides of the controller respectively.

You can choose between effects by entering "kill mode" and using pads 1 and 2 while holding shift.

Channel fader start

By moving a channel fader up from the very bottom while holding shift when a deck is paused, the deck will start playing. Moving the fader back to the bottom without releasing shift stops the deck and moves it back to its original position.

17.1.102 Pioneer DDJ-SB2

The Pioneer DDJ-SB2 is an all-in-one USB *MIDI* controller with a built in sound card. It has controls for 2 decks that can be toggled between decks to play with 4 decks.

- Manufacturer's product page

- Forum thread

New in version 2.0.

Audio

The sound card has 2 RCA jacks for the main output. There are two headphone jacks, one small (1/8") and one large (1/4") connector (each jack plays the same channels, they cannot be used for independent signals). There is a 1/4" microphone input with an adjustable gain knob. The microphone input is mixed directly with the main RCA outputs in hardware. It is not available to the computer, so cannot record or broadcast with the microphone input on the controller. You could use the controller with a separate USB *audio interface* that has a microphone input for that purpose. The microphone preamplifier is very noisy, so it is recommended to keep the microphone gain knob all the way down when not using a microphone, otherwise there will be noise added to the main RCA outputs.

Windows

Pioneer has a driver for Windows versions 7 and newer. Select the ASIO sound *API* in Mixxx's Sound Hardware Preferences.

Mac OS X & Linux

The DDJ-SB2 is a USB class compliant *MIDI* and audio device, so it works with Mac OS X and Linux without any special drivers.

User Options

There are some user configurable options for this mapping. To change the options, open the `.js` file in your controller for your Pioneer DDJ-SB2 with a text editor such as KWrite or GEdit on GNU/Linux, Notepad on Windows, or TextEdit on Mac OS X.

- **blinkingSync**: If true the sync button blinks with the beat, if false led is lit when sync is enabled.

- **invertVinylSlipButton**: If true, the vinyl button activates slip. Vinyl mode is then activated by using shift. Allows toggling slip faster, but is counterintuitive.

- **jogwheelSensivity**: Sets the jogwheels sensitivity. 1 is default, 2 is twice as sensitive, 0.5 is half as sensitive.

- **jogwheelShiftMultiplier**: Sets how much more sensitive the jogwheels get when holding shift. Set to 1 to disable jogwheel sensitivity increase when holding shift.

- **speedRateToNormalTime**: Time per step (in ms) for pitch speed fade to normal

- **showVumeterMaster**: If true Level-Meter shows VU-Main left & right. If false shows level of channel: 1/3 2/4 (depending active deck)

- **cutVumeter**: Cut's Level-Meter low and expand upper. Fore example, at 0.5 only signals greater 50% show on the meter, expanded to full range

- **twinkleVumeterAutodjOn**: If true VU-Level twinkle if AutoDJ is ON.

- **jumpPreviewEnabled**: If true, when releasing the browser knob, the preview deck jumps forward to "position".

- **jumpPreviewPosition**: The place in the track to jump to, on a scale from 0 (beginning of track) to 1 (end of track).

Usage

Library browsing

The controls for library browsing can be found in the center top of the controller.

Control	Function
Rotary knob	Track selection
Load buttons	Loads currently highlighted track to the corresponding deck
Pushing rotary knob	Loads currently highlighted track to the preview deck and plays it
Pushing rotary knob again without rotate	Stop the preview deck
Shift + rotary knob	Library section selection (scroll through left pane of library)
Shift + pushing rotary knob	Toggle expanding library section

Pushing the rotary knob to start playing a track in the preview deck then releasing it jumps forward in the preview deck. This behavior can be disabled in the mapping's user options and the place in the track it jumps to can also be configured.

Addition functions not belonging to library:

- Shift & load left -> toggle effects view in/out

- Shift & load right -> toggle sampler view in/out

Switching between decks

Press the deck button. It lights when deck 3-4 is active.

Volume, equalizers & filters

Between the decks the usual faders, crossfader and EQ knobs can be found. A filter knob is also available.

Knobs are available for the main and headphones level. These control the controller's built in sound card; they do not control the software gains in Mixxx, so moving them does not move the main and headphone gain knobs on screen.

The filter fade button changes the crossfader from fading the volumes between decks to using filters to fade between decks.

The TRIM knob controls the deck's gain.

Jogwheels, tempo & vinyl mode

When a deck is paused, the jogwheel allows you to browse through a track. If you want to browse faster, hold shift while using the jogwheel.

When a deck is playing, using the jogwheel allows you to temporarily change the tempo of the playing track. Again, holding shift exaggerates this effect.

The tempo slider allows changing the tempo of each deck. This normally changes the pitch of a track, but you can make the pitch stay constant by pressing the "key lock / tempo range" button. Additionally, with shift, the "key lock / tempo range" will fade the tempo slowly to 0. The fading speed can be customized with the speedRateToNormalTime mapping option.

Vinyl mode makes the jogwheels emulate the way turntables work. Vinyl mode can be toggled by pressing the "vinyl / slip" button. Touching the outer plastic ring of the jogwheel will temporarily change the tempo like when vinyl mode is off. Touching the metal disc simulates touching the vinyl record, so just putting your hand on it will stop the "vinyl". You can scratch in a similar way as with turntables in vinyl mode.

Slip mode

By pressing shift + "vinyl / slip" you can toggle slip mode. When entering slip mode, Mixxx remembers what point exactly of the track should be playing even if, for example, you scratch or make a loop. When you press shift + slip again, Mixxx will jump back to that point.

Pads - lower row

The play and cue pads should be self-explaining. The sync pad toggles sync lock for a deck, which tries to beatmatch the deck with the others, and also syncs the tempo between them, even when the tempo of one deck is changed.

Additional functions can be accessed by holding shift

Control	Function
Shift + play	Plays the track in reverse and enables slipping (see slip mode)
Shift + cue	Brakes the track as if the power of the motor on a turntable was turned off
Shift + sync	Enables quantize mode (this makes most actions, e.g. pressing play or setting the cue point, fall to the nearest beat)

Pads - hot cue mode

In hot cue mode the upper row of pads control the hotcues. Pressing a pad that is not lit sets a hotcue. Pressing a pad that is lit makes the track jump and play from that hotcue. Pressing a pad while holding shift deletes that hotcue.

You can control a set of 4 more hotcues by pressing shift + hot cue. The hot cue button will start blinking. The pads will behave in the same way, but controlling hotcues 5 to 8.

Pads - auto loop mode

Pressing the pads in auto loop mode will make loops of a specific length measured in beats.

Control	Function
Pad 1	set a loop of the selected number of beats
Pad 2	halve the selected loop length
Pad 3	double the selected loop length
Pad 4	reloop (reactivate a pre-existing loop)
Shift + pad 1	set a rolling loop of the selected number of beats
Shift + pad 2	beatjump backwards by the beatjump size, or move the loop backwards by the beatjump size if the loop is enabled
Shift + pad 3	beatjump forwards by the beatjump size, or move the loop forwards by the beatjump size if the loop is enabled
Shift + pad 4	enable loop, jump to loop in marker, and stop playback

Pads - manual loop mode

This mode allows you to set loops different from the fixed lengths of beats in auto loop mode.

Control	Function
Pad 1	Set loop in
Pad 2	Set loop out
Pad 3	Toggles loop
Pad 4	Halve loop length
Shift + pad 4	Double loop length
Shift + pad 1	Move loop one beat backward
Shift + pad 2	Move loop one beat forward

Pads - sampler mode

In sampler mode the sampler can be controlled. To load a file into a sampler, first press the sampler button while holding shift, so that the sampler button starts blinking. Now pressing a pad will load the currently highlighted track on the library into the corresponding sampler. Pressing a pad while holding shift will eject the sample.

To play samples, press the sampler button without holding shift (it should not blink). Pressing a pad will start playing the corresponding sample, pressing a pad while holding shift will stop it.

Pads - loop roll (shift + auto loop)

By pressing the auto loop button while holding shift (it should start blinking) you can make loop rolls. This mode combines auto loops with slip mode. The pads will start a loop in the current position with a determinate beat length while simultaneously enabling slip mode, so that when releasing the pad the track will continue playing as if the loop never happened.

Control	Function
Pad 1	1/16th beat loop roll
Pad 2	1/8th beat loop roll
Pad 3	1/4th beat loop roll
Pad 4	1/2 beat loop roll
Shift + pad 1	1 beat loop roll
Shift + pad 2	2 beat loop roll
Shift + pad 3	4 beat loop roll
Shift + pad 4	8 beat loop roll

Pads - kill (shift + manual loop)

By pressing the manual loop button while holding shift (it should start blinking) you can make the pads behave as EQ kill switches.

Control	Function
Pad 1	Kill low
Pad 2	Kill mid
Pad 3	Kill high
Pad 4	Mute

Effects

The knob controls the dry/wet knob of the whole effect chain when no effect is focused. When an effect is focused, the knob controls the metaknob of the focused effect. Focus an effect by pressing one of the effect buttons. To switch the controller's knob back to manipulating the dry/wet knob, unfocus by pressing the button of the focused effect again.

Press and hold an effect button to toggle the enable switch for that effect. The enable switches for each effect are not shown on the controller's LEDs, so you need to look at the screen to check whether an effect is on. All effects are off when Mixxx starts.

Use shift and the mixer knobs to control the parameters of the focused effect. The trim knob controls parameter 1, the equalizer knobs control parameters 2-4, and the filter knob controls parameter 5.

The DDJ-SB2 does not have enough buttons to control assigning effect units to different decks. You may want to set up a *custom keyboard mapping* to have easy access to those switches. Otherwise, you can use your mouse to click the buttons on screen.

Auto DJ

Start/stop Auto DJ: Shift + DECK 4. If enabled in the user options enabled, the level meter LEDs twinkle.

Skip Track: Shift + DECK 3

Channel fader start

By moving a channel fader up from the very bottom while holding shift when a deck is paused, the deck will start playing. Moving the fader back to the bottom without releasing shift stops the deck and moves it back to its original position.

17.1.103 Pioneer DDJ-SB3
Fig. 54: Pioneer DDJ-SB3 (schematic view)

The Pioneer DDJ-SB3 is a 4 deck USB DJ controller.

- Manufacturer's Firmware Update
- Mixxx User Forum

New in version 2.3.2.

Audio Setup

The mapping relies on the following channel assignments:

Output Channels	Assigned to
1-2	Master
3-4	Headphones

This controller mapping does not support any inputs. The controller itself has a microphone input, but that cannot be controlled via MIDI or routed to the computer.

Note: Decks 3 and 4 you will not work unless you map at least one of Mixxx's outputs to use the DDJ-SB3 sound card. This is a limitation of the controller's firmware.

Controller Mapping

A schematic drawing with the control numbers that are used here can be found on the specified page in the User Manual in the Links section.
Fig. 55: Deck section (p. 6)

Deck section (p. 6)

No.	Control	Function
1	TEMPO slider	Adjust track playing speed (can be adjusted via SYNC)
2	Jog Wheel (top)	Pitch bend (nudge) or scratch when vinyl mode is enabled
2	Jog Wheel (outer)	Pitch bend (nudge)
2	SHIFT + Jog Wheel (top)	Fast-forward or fast reverse track
3	HOT CUE	Set hot cue mode
3	SHIFT + HOT CUE	Set BEAT JUMP mode
4	FX FADE	Set FX fade mode
4	SHIFT + FX FADE	Set roll mode
5	PAD SCRATCH	Set pad scratch mode
5	SHIFT + PAD SCRATCH	Set slicer mode
6	SAMPLER	Set sampler mode
6	SHIFT + SAMPLER	Set trans mode
7	VINYL	Toggle vinyl mode
7	SHIFT + VINYL	Toggle slip mode
8	AUTO LOOP	Toggle auto loop
8	SHIFT + AUTO LOOP	Cancel loop or reloop
9	2X	Double loop length
10	1/2X	Halve loop length
11	Pad 1 - 8	Perform different functions depending on current mode
12	PLAY/PAUSE button	Play / pause
12	SHIFT + PLAY/PAUSE button	Return to temporary cue point
13	CUE button	Set, play and call out cue points
13	SHIFT + CUE button	Return to the beginning of the song
14	SYNC button	Match tempo and phase to currently playing deck
15	SHIFT + button	Switch function of controls
16	DECK X	Switch deck
17	KEY LOCK	Toggle key lock
17	SHIFT + KEY LOCK	Toggle tempo slider range
Fig. 56: Mixer section (p. 8)

Mixer section (p. 8)

No.	Control	Function
1	TRIM knob	Adjust individual channel output gain
2	HI/MID/LOW knobs	Adjust high/mid/low-frequencies
3	FILTER knob	Low pass / high pass filter for each channel
4	HEADPHONE CUE 1 button	Toggle headphone pre-fader listening of left deck.
4	HEADPHONE CUE 2 button	Toggle headphone pre-fader listening of right deck.
5	Channel faders	Adjust the output level for each channel
5	SHIFT Channel faders	Fader start and adjust the output level for each channel
6	Cross fader	Fade between left and right deck
7	MASTER knob	Adjust master output level. This changes the master output level directly on the controller's audio interface. The MAIN knob on the Mixxx UI will not change.
8	HEAD-PHONES knob	Adjust headphones output level. This changes the headphones' output level directly on the controller's audio interface. The HEAD knob on the Mixxx UI will not change.
9	MASTER button	Output master to headphones

Effect section (p. 8)
Fig. 57: Effects section (p. 8)

No.	Control	Function
1	1 button	Turns the effect on/off
1	SHIFT1 button	Focuses the effect
2	2 button	Turns the effect on/off
2	SHIFT2 button	Focuses the effect
3	3 button	Turns the effect on/off
3	SHIFT2 button	Focuses the effect
4	LEVEL knob	Adjusts the mix of the dry and wet signal of the effect unit

Browser section (p. 13)
Fig. 58: Browser section (p. 13)

No.	Control	Function
1	LOAD button	Loads track highlighted in the library to the left or right deck
2	BROWSE knob (rotate)	Rotate the knob left or right highlights the previous or next track in the library
2	BROWSE knob (press)	Starts / stops track preview of highlighted track

Performance Pads

You can use the Pad Mode Select buttons to select a mode for the performance pads. Performance pads are numbered from top left to bottom right. First row is 1-4 and the second row is 5-8. Press shift and the pad mode select button to access other pad modes.

Hot Cue Mode

Hot Cue mode is enabled by pressing the HOT CUE button. The button will light up when selected.
Fig. 59: Pioneer DDJ-SB3 (performance pads in hot cue mode)

Bookmark positions in the track and jump to them.

No.	Control	Function
1-8	Pad (unlit)	Save current position as hot cue.
1-8	Pad (lit)	Jump to hot cue.
1-8	SHIFT + Pad (lit)	Clear hot cue.

Beatjump Mode

Beatjump mode is enabled by holding SHIFT down and pressing the HOT CUE button. The button will flash when selected. Use beatjump mode to jump back or forward on the track by a certain number of beats.
Fig. 60: Pioneer DDJ-SB3 (performance pads in beatjump mode)

No.	Control	Function
1	Pad	Decrease beatjump size
2	Pad	Increase beatjump size
3	Pad	Jump left
4	Pad	Jump right
5	Pad	Go back to beginning of track
6	Pad	Search left
7	Pad	Search right
8	Pad	Censor

FX Fade Mode

FX Fade mode is enabled by pressing the FX FADE button. The button will light up when selected. FX fade is a set of functions built-in to the controller.
Fig. 61: Pioneer DDJ-SB3 (Fade mode performance pads)

No.	Control	Function
1	Pad (unlit)	Applies a high-pass filter from off to max
1	Pad (blinking)	Turn off filter
2	Pad (unlit)	Applies a low-pass filter from off to max
2	Pad (blinking)	Turn off filter
3	Pad (unlit)	Apply 1 beat auto-loop and lower volume
3	Pad (blinking)	Turn off loop and restore volume
4	Pad	Perform a back-spin and resume
5	Pad	Same as pad 1 but over more time
6	Pad	Same as pad 2 but over more time
7	Pad	Auto-loop with exponential size reduction
8	Pad	Same as 4 but with a longer back-spin

Loop Roll Mode

Loop roll mode is enabled by holding SHIFT down and by pressing the FX FADE button. The button will blink when selected. Press one of the pads to trigger a momentary loop roll. Once the pad is released, the track will resume playing.
Fig. 62: Pioneer DDJ-SB3 (performance pads in loop roll mode)

No.	Control	Function
1	Pad	1/16 beat loop roll
2	Pad	1/8 beat loop roll
3	Pad	1/4 beat loop roll
4	Pad	1/2 beat loop roll
5	Pad	1 beat loop roll
6	Pad	2 beat loop roll
7	Pad	4 beat loop roll
8	Pad	8 beat loop roll

Pad Scratch Mode

Pad scratch mode is enabled by pressing the PAD SCRATCH button. The button will light up when selected. Press one of the pads to trigger one of the built in scratches.
Fig. 63: Pioneer DDJ-SB3 (performance pads in pad scratch mode)

Slicer Mode

Slicer mode is enabled by holding SHIFT down and by pressing the PAD SCRATCH button. The button will blink when selected. In this mode every pad represents a marker in the beat grid. Each pad will light up as each slice is played. Press a pad to repeat the slice and hold the pad down to loop it.
Fig. 64: Pioneer DDJ-SB3 (performance pads in slicer mode)

Sampler Mode

Sampler mode is enabled by pressing the SAMPLER button. The button will light up when selected.
Fig. 65: Pioneer DDJ-SB3 (performance pads in sampler mode)

No.	Control	Function
1	Pad	Play sample 1
1	SHIFT + Pad	Stop sample 1
2	Pad	Play sample 2
2	SHIFT + Pad	Stop sample 2
3	Pad	Play sample 3
3	SHIFT + Pad	Stop sample 3
4	Pad	Play sample 4
4	SHIFT + Pad	Stop sample 4
5	Pad	Load sample 1
5	SHIFT + Pad	Unload sample 1
6	Pad	Load sample 2
6	SHIFT + Pad	Unload sample 2
7	Pad	Load sample 3
7	SHIFT + Pad	Unload sample 3
8	Pad	Load sample 4
8	SHIFT + Pad	Unload sample 4

Trans Mode

Trans mode is enabled by holding SHIFT down and by pressing the SAMPLER button. The button will blink when selected. Press one of the pads to trigger one of the built in cut effects. This mode is driven entirely by the controller's firmware, so there is no equivalent in the Mixxx UI. In this mode, pressing and holding a pad triggers a Cut Effect, where the deck's fader volume is toggle from 0 to max at the rate described in the table below. For example, pressing and holding pad 5 will cause the volume to toggle from max to min every one beat.

Fig. 66: Pioneer DDJ-SB3 (performance pads in trans mode)

No.	Control	Function
1	Pad	1/16 beat cut effect
2	Pad	1/8 beat cut effect
3	Pad	1/4 beat cut effect
4	Pad	1/2 beat cut effect
5	Pad	1 beat cut effect
6	Pad	2 beat cut effect
7	Pad	1/3 beat cut effect
8	Pad	Manual cut effect

17.1.104 Pioneer DDJ-SX

The Pioneer DDJ-SX is a 4 deck all-in-one controller that provides intuitive control of all of Mixxx's features. The DDJ-SX mapping reportedly works with the DDJ-SX2, but it does not use the new features of the DDJ-SX2 hardware.

- Manufacturer's product page

- Forum thread

- User Manual

New in version 2.1.

User Options

To change the mapping's user options, you have to open the script file (*.js*). *At the top of the file under **USER OPTIONS**
the following settings can be made:

- **PioneerDDJSX.jogwheelSensivity**: Sets the jogwheel sensitivity. 1 = default, 2 is twice as sensitive, 0.5 is half as sensitive.

- **PioneerDDJSX.jogwheelShiftMultiplier**: Sets how much more sensitive the jogwheels get when holding SHIFT. Set it to 1 to disable jogwheel sensitivity increase when holding SHIFT.

- **PioneerDDJSX.twinkleVumeterAutodjOn**: If true, level-meter twinkles if *AutoDJ* is enabled.

- **PioneerDDJSX.autoDJAddTop**: If true, the selected track will be added to *AutoDJ* queue-top on pressing RO-TARY SELECTOR, else the selected track will be added to *AutoDJ* queue-bottom.

- **PioneerDDJSX.autoDJTickInterval**: Sets the duration of sleeping between *AutoDJ* actions if *AutoDJ* is enabled [ms].

- **PioneerDDJSX.autoDJMaxBpmAdjustment**: Sets the maximum adjustment of BPM allowed for beats to sync if *AutoDJ* is enabled.

- **PioneerDDJSX.autoDJShuffleAfterSkip**: If true, *AutoDJ* queue is being shuffled after skipping a track.

- **PioneerDDJSX.jumpPreviewEnabled**: If true, by releasing the Rotary Selector, track in preview player jumps forward to `jumpPreviewPosition`.

- **PioneerDDJSX.jumpPreviewPosition**: Sets the preview player absolute position, being set at releasing Rotary Selector and if `jumpPreviewEnabled` enabled.

- **PioneerDDJSX.samplerCueGotoAndPlay**: If true, pad press in SAMPLER PAD MODE repeatedly causes *sampler* to play loaded track from cue-point, else it causes to play loaded track from the beginning.

- **PioneerDDJSX.autoPFL**: If true, PFL / Cue (headphone) is being activated by loading a track into certain deck.

General Functions

Group	Fig- ure	Control	Description
5 - BROWSER	2, 3, 4, 5	LOAD	Loads the selected track into the specific deck
5 - BROWSER	2	SHIFT + LOAD	AutoDJ - Toggle BPM sync
5 - BROWSER	3	SHIFT + LOAD	AutoDJ - Toggle Key sync
5 - BROWSER	1	Rotary Selector	Move UP or DOWN the specified number of locations in Library (MoveVertical function)
5 - BROWSER	1	Rotary Selector (press)	Equivalent to double clicking the currently selected item in Library (GoToItem function)
5 - BROWSER	1	SHIFT + Rotary Selector	Move LEFT or RIGHT the specified number of locations in Library (MoveHorizontal function)
5 - BROWSER	1	SHIFT + Rotary Selector (press)	Add track from Library to AutoDJ queue at top/bottom (see user options: default = at bottom)
5 - BROWSER	6	BACK	Currently focused pane changes in Library - previously focused pane will be focused (MoveFocusBackward function)
5 - BROWSER	6	SHIFT BACK	Maximize view of Library
5 - BROWSER	7	LOAD PREPARE	Load selected track into PreviewDeck, jump to position (see user options) and play, else stop already playing track
3 - MIXER	1	Crossfader	Controls Mixxx crossfader, fades between deck 1, 3 and 2, 4
3 - MIXER	2	Channel fader	Controls deck volume
3 - MIXER	2	SHIFT Channel fader	Fader start (starts playing deck when rising deck volume)
3 - MIXER	3	TRIM	Controls deck gain
3 - MIXER	4	EQ HIGH	Controls deck's equalizer/filter high frequencies
3 - MIXER	5	EQ MID	Controls deck's equalizer/filter mid frequencies
3 - MIXER	6	EQ LOW	Controls deck's equalizer/filter low frequencies
3 - MIXER	7	CUE	Toggles PFL/Cue (headphones) for specific deck
3 - MIXER	7	SHIFT CUE	BPM Tab function for specific deck
3 - MIXER	8	MASTER LEVEL	Controls the main output volume
3 - MIXER	9	MASTER CUE	Toggles main cue
3 - MIXER	9	SHIFT MASTER CUE	Toggles split cue (headphones)
3 - MIXER	10	Crossfader Assign	Crossfader assignment - deck to crossfader (left (A), right (B) or center (THRU))
3 - MIXER	13	HEADPHONES MIX	Controls headphone's audio source (cue, main)
3 - MIXER	14	SAMPLER VOL- UME	Controls volume of all available Sampler decks
3 - MIXER	15	BOOTH MONI- TOR LEVEL	Controls the booth output volume
4 - FRONT PANEL	1	Crossfader curve	Controls Mixxx crossfader curve
4 - FRONT PANEL	2	INPUT SELECT	Controls deck source (PC, MIC, CD, PHONO, LINE)
1 - DECK	25	PANEL SELECT	Show/hide Sampler decks / Effect rack

---

Note: The MASTER LEVEL, MASTER CUE, HEADPHONE MIX, BOOTH MONITOR LEVEL and INPUT SE-
LECT controls directly affect the controller's sound card, so adjusting these will not change anything on screen in Mixxx.

Deck Functions

The controls listed here are documented in Section 1 ("Deck") of the owner's manual.

Figure	Control	Description
1	PLAY/PAUSE	Toggles play/pause (hold pressed while playing: starts brake effect -> release: pause track, pr
1	SHIFT + PLAY/PAUSE	Toggles play stutter
2	CUE	Toggles default cue (sets cue point/ goes to cue point)
2	SHIFT + CUE	Jump to the beginning of the track and stop
3	Jog Wheel (platter)	Vinyl-Mode enabled: performs scratching when pressed and rotated, Vinyl-Mode disabled: p
3	SHIFT + Jog Wheel (platter)	Vinyl-Mode enabled: performs scratching considering user-options multiplier when touched a
3	Jog Wheel (side)	Performs pitch bend when rotated
3	SHIFT + Jog Wheel (side)	Performs pitch bend when rotated considering user-options multiplier
4	TEMPO	Controls pitch/tempo ratio
5	KEYLOCK	Toggles keylock
5	SHIFT + KEYLOCK	Changes TEMPO slider range: Doubles the *rateRange*, starting from the value set up in the M
5	KEYLOCK (long press)	Toggles pitch/tempo reset
6	NEEDLE SEARCH	Jumps to equivalent absolute position in track if track is stopped.
6	SHIFT + NEEDLE SEARCH	Jumps to equivalent absolute position in track while track is playing.
7	DECK 1	Switches left deck to DECK 1 control and illumination
8	DECK 2	Switches right deck to DECK 2 control and illumination
9	DECK 3	Switches left deck to DECK 3 control and illumination
10	DECK 4	Switches right deck to DECK 4 control and illumination
11	DUAL DECK	Toggles left deck to dual deck control and illumination (DECK 1 and 3)
12	DUAL DECK	Toggles right deck to dual deck control and illumination (DECK 2 and 4)
13	SYNC	Toggles deck sync
13	SHIFT + SYNC	Toggles quantize function
14	AUTO LOOP	Set and enable beat loop
14	SHIFT AUTO LOOP	Activates / Deactivates current loop
15	LOOP 1/2X	Halves active loop
15	SHIFT LOOP 1/2X	Moves active loop one beat backward (left)
16	LOOP 2X	Doubles active loop
15	SHIFT LOOP 2X	Moves active loop one beat forward (right)
17	LOOP IN	Toggles loop in
17	SHIFT LOOP IN	Activates current loop, jumps to its loop in point and stops playback.
18	LOOP OUT	Toggles loop out
18	SHIFT LOOP OUT	Toggles reloop / exit loop
19	VINYL	Toggles vinyl (scratch) mode
20	CENSOR	Toggles reverse roll play
20	SHIFT CENSOR	Toggles reverse play
21	SLIP	Toggles slip mode
22	GRID ADJUST	Hold and touch/rotate Jog dial to adjust beats faster/slower
22	SHIFT GRID ADJUST	Set/translate beat grid to current track position (adjust position with Jog dial)
23	GRID SLIDE	Hold and touch/rotate Jog dial to set/translate beat grid earlier/later
24	SHIFT	Switches to shifted controls, no direct function

Performance Pads

The performance pads support multiple different modes. The controls listed here are documented in Section 6 ("Performance Pads") of the owner's manual.

Figure	Control	Description
9	HOT CUE mode	Switches pad control and illumination to *HOT CUE mode*
10	ROLL mode	Switches pad control and illumination to *BEATLOOP ROLL mode*
10	SHIFT + ROLL mode	Switches pad control and illumination to *GROUP2 (BEATLOOP) mode*
11	SLICER mode	Switches pad control and illumination to *SLICER mode*, in SLICER mode switches between continuous slice mode and loop slice mode
12	SAMPLER mode	Switches pad control and illumination to *SAMPLER mode*
12	SAMPLER mode (long press)	Toggles sampler pad velocity mode (velocity ~ volume)

HOT CUE Mode

Figure	Control	Description
1	PAD 1	Set/activate Hot cue 1
1	SHIFT + PAD 1	Clear Hot cue 1
2	PAD 2	Set/activate Hot cue 2
2	SHIFT + PAD 2	Clear Hot cue 2
3	PAD 3	Set/activate Hot cue 3
3	SHIFT + PAD 3	Clear Hot cue 3
4	PAD 4	Set/activate Hot cue 4
4	SHIFT + PAD 4	Clear Hot cue 4
5	PAD 5	Set/activate Hot cue 5
5	SHIFT + PAD 5	Clear Hot cue 5
6	PAD 6	Set/activate Hot cue 6
6	SHIFT + PAD 6	Clear Hot cue 6
7	PAD 7	Set/activate Hot cue 7
7	SHIFT + PAD 7	Clear Hot cue 7
8	PAD 8	Set/activate Hot cue 8
8	SHIFT + PAD 8	Clear Hot cue 8
13	PARAMETER LEFT	Jump *beatjump_size* beats backward
13	SHIFT + PARAMETER LEFT	Increase *beatjump_size*
14	PARAMETER RIGHT	Jump *beatjump_size* beats forward
14	SHIFT + PARAMETER RIGHT	Decrease *beatjump_size*

BEATLOOP ROLL Mode

By using the PARAMETER LEFT and PARAMETER RIGHT buttons in BEATLOOP ROLL (default parameter set: 2), you can change the pad-assigned loop size. The following table shows the possible assignments (unit: beats).

Set No.	Pad 1	Pad 2	Pad 3	Pad 4	Pad 5	Pad 6	Pad 7	Pad 8
0	1/4	1/2	1	2	4	8	16	32
1	1/8	1/4	1/2	1	2	4	8	16
2	1/16	1/8	1/4	1/2	1	2	4	8
3	1/32	1/16	1/8	1/4	1/2	1	2	4

Fig- ure	Control	Description
1	PAD 1	Toggle Beatloop roll length index 1 (according parameter set)
2	PAD 2	Toggle Beatloop roll length index 2 (according parameter set)
3	PAD 3	Toggle Beatloop roll length index 3 (according parameter set)
4	PAD 4	Toggle Beatloop roll length index 4 (according parameter set)
5	PAD 5	Toggle Beatloop roll length index 5 (according parameter set)
6	PAD 6	Toggle Beatloop roll length index 6 (according parameter set)
7	PAD 7	Toggle Beatloop roll length index 7 (according parameter set)
8	PAD 8	Toggle Beatloop roll length index 8 (according parameter set)
13	PARAMETER LEFT	Decrement active looproll-interval parameter set (0-3), button LED is illuminated at parameter set 2, 3
14	PARAMETER RIGHT	Increment active looproll-interval parameter set (0-3), button LED is illuminated at parameter set 1, 3

SLICER Mode

For a detailed explanation of the slicer mode, take a look at the controller's manual. A limited slicer functionality is implemented into the controller mapping as described below.

There are two slicer modes, continuous slice and loop slice, which can be selected by pressing the SLICER mode button. If none or only one pad (beat) is lit, continuous slice mode is active. If you press SLICER mode button again, loop slice mode will be activated and all pads, except one for the beat, will light up.

Starting with the first beat marked on a playing track, the track is divided into sections of 8 equal parts (not visible in waveform). If the first 8 parts are reached, the next section starts. The pads are assigned to one section, each time the active section changes, the pads will be assigned to the new active section (pad 1..8 = section part 1..8). The section size is dependent of the selected slicer domain, changeable by pressing SHIFT + PARAMETER LEFT or PARAMETER RIGHT. The default slicer domain is 8 beats, so each part represents the part between one beat and the following beat. Possible slicer domains are 8, 16, 32, 64 beats.

Fig-ure	Control	Description
1	PAD 1	Press: Jumps to beat position 1 in 8-beat-section and beat loops according quantization index (default: 1/4 beat), Release (continuous slice only): Jumps to actual play position in the background (slip).
2	PAD 2	Press: Jumps to beat position 2 in 8-beat-section and beat loops according quantization index (default: 1/4 beat), Release (continuous slice only): Jumps to actual play position in the background (slip).
3	PAD 3	Press: Jumps to beat position 3 in 8-beat-section and beat loops according quantization index (default: 1/4 beat), Release (continuous slice only): Jumps to actual play position in the background (slip).
4	PAD 4	Press: Jumps to beat position 4 in 8-beat-section and beat loops according quantization index (default: 1/4 beat), Release (continuous slice only): Jumps to actual play position in the background (slip).
5	PAD 5	Press: Jumps to beat position 5 in 8-beat-section and beat loops according quantization index (default: 1/4 beat), Release (continuous slice only): Jumps to actual play position in the background (slip).
6	PAD 6	Press: Jumps to beat position 6 in 8-beat-section and beat loops according quantization index (default: 1/4 beat), Release (continuous slice only): Jumps to actual play position in the background (slip).
7	PAD 7	Press: Jumps to beat position 7 in 8-beat-section and beat loops according quantization index (default: 1/4 beat), Release (continuous slice only): Jumps to actual play position in the background (slip).
8	PAD 8	Press: Jumps to beat position 8 in 8-beat-section and beat loops according quantization index (default: 1/4 beat), Release (continuous slice only): Jumps to actual play position in the background (slip).
13	PARAME-TER LEFT	Decrement active slicer quantization (1/8, 1/4, 1/2, 1 beat loop), button LED is illuminated at quantization 1/2, 1
13	SHIFT + PARAMETER LEFT	Decrement active slicer domain (8, 16, 32, 64 beats), button LED is illuminated at domain 32, 64
14	PARAME-TER RIGHT	Increment active slicer quantization (1/8, 1/4, 1/2, 1 beat loop), button LED is illuminated at quantization 1/4, 1
14	SHIFT + PARAMETER RIGHT	Increment active slicer domain (8, 16, 32, 64 beats), button LED is illuminated at domain 16, 64

Continuous slice mode

The pad lights show the active part in the active section: The active part pad is lit, all other pad lights are off.

Continuous slice mode moves to the next section if the end of the previous active section is reached.

By pressing pad X, the play position jumps to the beat X of the active section. If you have pressed the pad on-beat and hold it, the play position is playing in loop. The beat loop length depends on the selected slicer quantization (changeable by pressing PARAMETER LEFT or PARAMETER RIGHT). If you release the pad, the playback will resume where the track would have been if the slicer wouldn't have been activated (slip mode).
Fig. 67: Pioneer DDJ SX Slicer (type 1)

Loop slice mode

The pad lights show the active part in the active section: The active part pad light is off, all other pads are lit.

As soon as loop slice mode is activated, the active section is played in loop (not visible in waveform). If the end of the active section is reached, the play position jumps back to the beginning of the active section.
Fig. 68: Pioneer DDJ SX Slicer (type 2)

By pressing pad X, the play position jumps to the beat X of the active section. In loop slice mode beat loop is not possible.

As soon as loop slice mode is deactivated (by pressing SLICER mode button again), the playback will resume where the track would have been if the slicer wouldn't have been activated (slip mode).

SAMPLER Mode

Fig-ure	Control	Description
1	PAD 1	Sample deck index 1 (according sampler bank) - empty: Load selected track into sample deck, track loaded: start play (default, see user options) sample deck
1	SHIFT + hwla-bel:*PAD 1*	Sample deck index 1 (according sampler bank) - playing: stop deck, stopped: eject track
2	PAD 2	Sample deck index 2 (according sampler bank) - empty: Load selected track into sample deck, track loaded: start play (default, see user options) sample deck
2	SHIFT + hwla-bel:*PAD 2*	Sample deck index 2 (according sampler bank) - playing: stop deck, stopped: eject track
3	PAD 3	Sample deck index 3 (according sampler bank) - empty: Load selected track into sample deck, track loaded: start play (default, see user options) sample deck
3	SHIFT + hwla-bel:*PAD 3*	Sample deck index 3 (according sampler bank) - playing: stop deck, stopped: eject track
4	PAD 4	Sample deck index 4 (according sampler bank) - empty: Load selected track into sample deck, track loaded: start play (default, see user options) sample deck
4	SHIFT + hwla-bel:*PAD 4*	Sample deck index 4 (according sampler bank) - playing: stop deck, stopped: eject track
5	PAD 5	Sample deck index 5 (according sampler bank) - empty: Load selected track into sample deck, track loaded: start play (default, see user options) sample deck
5	SHIFT + hwla-bel:*PAD 5*	Sample deck index 5 (according sampler bank) - playing: stop deck, stopped: eject track
6	PAD 6	Sample deck index 6 (according sampler bank) - empty: Load selected track into sample deck, track loaded: start play (default, see user options) sample deck
6	SHIFT + hwla-bel:*PAD 6*	Sample deck index 6 (according sampler bank) - playing: stop deck, stopped: eject track
7	PAD 7	Sample deck index 7 (according sampler bank) - empty: Load selected track into sample deck, track loaded: start play (default, see user options) sample deck
7	SHIFT + hwla-bel:*PAD 7*	Sample deck index 7 (according sampler bank) - playing: stop deck, stopped: eject track
8	PAD 8	Sample deck index 8 (according sampler bank) - empty: Load selected track into sample deck, track loaded: start play (default, see user options) sample deck
8	SHIFT + hwla-bel:*PAD 8*	Sample deck index 8 (according sampler bank) - playing: stop deck, stopped: eject track
13	PARAM-ETER LEFT	Decrement active sampler bank (0-3), button LED is illuminated at sampler bank 2, 3. Sampler bank 0: sampler 1-8, sampler bank 1: sampler 9-16 sampler bank 2: sampler 17-24, sampler bank 3: sampler 25-32
14	PARAM-ETER RIGHT	Increment active sampler bank (0-3), button LED is illuminated at sampler bank 1, 3. Sampler bank 0: sampler 1-8, sampler bank 1: sampler 9-16, sampler bank 2: sampler 17-24, sampler bank 3: sampler 25-32

BEATLOOP Mode (GROUP2)

By using the PARAMETER LEFT and PARAMETER RIGHT buttons in BEATLOOP mode (default parameter set: 0), you can change the pad-assigned loop size. The following table shows the possible assignments (unit: beats).

Set No.	Pad 1	Pad 2	Pad 3	Pad 4	Pad 5	Pad 6	Pad 7	Pad 8
0	1/4	1/2	1	2	4	8	16	32
1	1/8	1/4	1/2	1	2	4	8	16
2	1/16	1/8	1/4	1/2	1	2	4	8
3	1/32	1/16	1/8	1/4	1/2	1	2	4

Figure	Control	Description
1	PAD 1	Toggle Beatloop length index 1 (according parameter set)
2	PAD 2	Toggle Beatloop length index 2 (according parameter set)
3	PAD 3	Toggle Beatloop length index 3 (according parameter set)
4	PAD 4	Toggle Beatloop length index 4 (according parameter set)
5	PAD 5	Toggle Beatloop length index 5 (according parameter set)
6	PAD 6	Toggle Beatloop length index 6 (according parameter set)
7	PAD 7	Toggle Beatloop length index 7 (according parameter set)
8	PAD 8	Toggle Beatloop length index 8 (according parameter set)
13	PARAMETER LEFT	Decrement active loop-interval parameter set (0-3), button LED is illuminated at parameter set 2, 3
14	PARAMETER RIGHT	Increment active loop-interval parameter set (0-3), button LED is illuminated at parameter set 1, 3

Effect Functions

This controller mapping uses the *standard Mixxx mapping for effects sections on controllers*. The controls listed here are documented in Section 2 ("Effects") of the owner's manual.

Figure	Control	Description
1 (L)	FX1-1	Focused effect none: Controls EffectRack1-EffectUnit1/3-Effect1 meta, Focused effect 1..3: Controls effect parameter 1 of effect in EffectRack1-EffectUnit1/3
1 (L)	SHIFT + FX1-1	Controls effect selection for EffectRack1-EffectUnit1/3 effect 1
1 (R)	FX2-1	Focused effect none: Controls EffectRack1-EffectUnit2/4-Effect1 meta, Focused effect 1..3: Controls effect parameter 1 of focused effect in EffectRack1-EffectUnit2/4
1 (R)	SHIFT + hwla-bel:*FX2-1*	Controls effect selection for EffectRack1-EffectUnit2/4 effect 1
2 (L)	FX1-2	Focused effect none: Controls EffectRack1-EffectUnit1/3-Effect2 meta, Focused effect 1..3: Controls effect parameter 2 of focused effect in EffectRack1-EffectUnit1/3
2 (L)	SHIFT + hwla-bel:*FX1-2*	Controls effect selection for EffectRack1-EffectUnit1/3 effect 2
2 (R)	FX2-2	Focused effect none: Controls EffectRack1-EffectUnit2/4-Effect2 meta, Focused effect 1..3: Controls effect parameter 2 of focused effect in EffectRack1-EffectUnit2/4
2 (R)	SHIFT + hwla-bel:*FX2-2*	Controls effect selection for EffectRack1-EffectUnit2/4 effect 2
3 (L)	FX1-3	Focused effect none: Controls EffectRack1-EffectUnit1/3-Effect3 meta, Focused effect 1..3: Controls effect parameter 3 of focused effect in EffectRack1-EffectUnit1/3
3 (L)	SHIFT + hwla-bel:*FX1-3*	Controls effect selection for EffectRack1-EffectUnit1/3 effect 3
3 (R)	FX2-3	Focused effect none: Controls EffectRack1-EffectUnit2/4-Effect3 meta, Focused effect 1..3: Controls effect parameter 3 of focused effect in EffectRack1-EffectUnit2/4
3 (R)	SHIFT + hwla-bel:*FX2-3*	Controls effect selection for EffectRack1-EffectUnit2/4 effect 3
4 (L)	FX1 BEATS	Controls EffectRack1-EffectUnit1/3 mix
4 (R)	FX2 BEATS	Controls EffectRack1-EffectUnit2/4 mix
4 (L)	SHIFT + hwla-bel:*FX1 BEATS*	Controls EffectRack1-EffectUnit1/3 super1 knob
4 (R)	SHIFT + hwla-bel:*FX2 BEATS*	Controls EffectRack1-EffectUnit2/4 super1 knob
5 (L)	FX1-1 ON	EffectFocusButton press and hold: focus EffectRack1-EffectUnit1/3-Effect1, else: Toggles EffectRack1-EffectUnit1/3-Effect1
5 (R)	FX2-1 ON	EffectFocusButton press and hold: focus EffectRack1-EffectUnit2/4-Effect1, else: Toggles EffectRack1-EffectUnit2/4-Effect1
6 (L)	FX1-2 ON	EffectFocusButton press and hold: focus EffectRack1-EffectUnit1/3-Effect2, else: Toggles EffectRack1-EffectUnit1/3-Effect2
6 (R)	FX2-2 ON	EffectFocusButton press and hold: focus EffectRack1-EffectUnit2/4-Effect2, else: Toggles EffectRack1-EffectUnit2/4-Effect2
7 (L)	FX1-3 ON	EffectFocusButton press and hold: focus EffectRack1-EffectUnit1/3-Effect3, else: Toggles EffectRack1-EffectUnit1/3-Effect3
7 (R)	FX2-3 ON	EffectFocusButton press and hold: focus EffectRack1-EffectUnit2/4-Effect3, else: Toggles EffectRack1-EffectUnit2/4-Effect3
8 (L)	FX1 TAP	EffectFocusButton of EffectRack1-EffectUnit1/3
8 (R)	FX2 TAP	EffectFocusButton of EffectRack1-EffectUnit2/4
8 (L)	SHIFT + hwla-bel:*FX1 TAP*	Switch EffectUnit 1 <-> 3
8 (R)	SHIFT + hwla-bel:*FX2 TAP*	Switch EffectUnit 2 <-> 4
9, 10, 11, 12	FX1 ASSIGN	Assign EffectRack1-EffectUnit1/3 to specific deck
13, 14, 15, 16	FX2 ASSIGN	Assign EffectRack1-EffectUnit2/4 to specific deck
17, 18, 19, 20	FILTER	Control QuickEffectRack1 super1 knob (e.g. moog filter)

Troubleshooting

If you experience any strange behavior of a button or a LED (e.g. wheel LEDs not working), make sure your controller is set up correctly to work with Mixxx. The DDJ-SX provides several settings, which can be changed in a special *Utility-Mode*.

Utility-Mode

- Disconnect USB-cable.

- Switch off STANDBY/ON the unit.

- Hold SHIFT button and PLAY/PAUSE button at the left deck while switching on the unit STANDBY/ON.

- Now *Utility-Mode* is activated.

- For saving and exiting *Utility-Mode*, switch off the unit again STANDBY/ON.

Setting for usage of Serato DJ

To use the DDJ-SX with Mixxx, the controller must be configured for the usage of Serato DJ. You can check/change this setting by pressing the KEY LOCK button at the left deck.

- KEY LOCK button off: Controller is configured for using Serato DJ (default).

- KEY LOCK button on (lit): Controller is configured for using different DJ-software.

17.1.105 Reloop Beatmix 2

The **Reloop Beatmix 2** is a performance-oriented 2-channel pad controller with integrated soundcard. **Beatmix 2** offers an ergonomically designed 2-channel mixer layout, optimized for the club allowing you to work intuitively: Dedicated equalizer and gain dials, high-quality line-faders, an extremely smooth-running crossfader, 16 multi-colour drum pads, as well as two extensive FX units are the foundation for your creativity.

This controller is a midi and audio class compliant device so it is compatible as-is with Linux, MacOS and Windows. However, on Windows, the manufacturer ship an ASIO low-latency driver that can be found on the manufacturer's product page.

The mapping for the *Reloop Beatmix 4* should be compatible with this controller, but hasn't been tested. See the *Reloop Beatmix 4* page for the complete mapping description.

- Manufacturer's product page

- Forum thread

New in version 2.1.

17.1.106 Reloop Beatmix 4

The Reloop Beatmix 4 is a performance-oriented 4-channel pad controller with integrated soundcard. It offers an ergonomically designed 4-channel mixer layout, optimized for the club allowing you to work intuitively: Dedicated equalizer and gain dials, high-quality line-faders, an extremely smooth-running crossfader, 16 multi-colour drum pads, as well as two extensive FX units are the foundation for your creativity.

- Manufacturer's product page
- Forum thread

New in version 2.1.

Audio

This controller is a MIDI and audio class compliant device so it is compatible as-is with Linux, MacOS and Windows. On windows, the manufacturer ships an *ASIO* low-latency driver that can be found on the Manufacturer's product page.

The MIC input is hardware-mixed and is not digitized so Mixxx can not have any control on the mic and you can not use ducking in Mixxx. The MASTER volume and PHONES volume knobs directly control hardware and don't change Mixxx controls.

Mixer Section

Control	Description
MASTER	Controls the main volume to your main sound system. This controls the built in sound card and has no effect on the main gain knob in Mixxx.
PHONES	Controls your headphones volume. This controls the built in sound card and has no effect on the headphone gain knob in Mixxx.
CUE MIX	Mixes the headphones CUE signal between your selected channel and the main output.
TRAX SELECT	Use the *Trax selector* to navigate through your song library.
TRACK LOAD (short press)	Load tracks on either channel. These buttons are lit when a track is loaded into the associated deck.
TRACK LOAD (long press)	Eject the selected deck.
SHIFTTRACK LOAD	Enable and launch a track using your linefader (FADER-START, hardware function)
CUE	Pre-listen the selected channel in your headphones. This buttons lights-up when activated
BACK	Switch *Trax action* between playlists (sidebar), tracks and Preview Deck.
SAMPLER VOLUME	Controls the volume of all samplers.
LINE FADERS	Controls your channel volume.
CROSSFADER	Enables you to fade between your decks.
GAIN	Adjust the gain for each deck.
EQ	Tweak the high, mid or low frequencies when mixing your track.
DECK	Press the deck button to swap between decks 1 & 3 on the left and 2 & 4 on the right.

Hint: You can replace the fader cap of the SAMPLER VOLUME fader with a custom colored fader cap to make it visually stand out from the channel volume faders.

Trax selector and Back button

The trax selector let you navigate through your library (playlist and tracks) as well as preview tracks.

The trax selector has three modes:

Track mode (default)
Turning the trax selector will select tracks (one by one), turning with shift will select tracks faster (10 by 10). Pressing the Back button will switch to Playlist mode and pushing the trax selector will load the selected track into the preview deck, start playing and switch to Preview mode.

Playlist mode
Turning the trax selector will select sidebar item (one by one), turning with shift will select sidebar item faster (10 by 10). Pressing the trax selector will expand/collapse the selected sidebar item and pressing the Back button will return to Track mode.

Preview mode
Turning the trax selector let you navigate through the track loaded in the PreviewDeck (faster with shift), pushing the trax selector will play/pause the preview deck and pushing the back button return to Track mode.

Transport Section

Control	Description
PLAY/PAUSE	Press to launch and pause your track.
SHIFT + PLAY/PAUSE	Reverses the direction of the track playing.
CUE	Sets a temporary *cue point*. It is set by pausing the track and pressing the CUE button. While the track is playing, press the button to return to that point, where it will pause.
SHIFT + CUE	Takes you back to the start of your track.
CUP	Takes you directly to your cue point and starts playback instantly. If no cue point is set, it will jump to the beginning of the track.
SHIFT + CUP	Changes the pitch range, cycling through 8%, 10%, 12% and 16%
SYNC	Syncs the BPM and phase to that of the other track (if *BPM* is detected on both).
SHIFT + SYNC	Turn on sync lock, keeping sync enabled

Jog wheel and pitch slider

Touch and move the jog wheel to scratch (either deck playing or not).

When playing, use the side of the wheel, without touching the metallic platter, to temporarily bend the pitch (speed up/slow down playback). When the deck is not playing, using the side of the wheel let you quick search through your track.

Hold SHIFT and turn the jog wheel to quick search through your track. SHIFT ignores touch sensitive platter so holding it and turning jogwheel is the same as using the side of the jog wheel.

When a deck is playing, jog led will turn around at 33.3 RPM. When track time left is below 30 seconds, jog leds will blink slowly, and when track time remaining is below 15 seconds, jog leds will blink quickly. These delays can be changed by editing the two variables at the beginning of the JavaScript file and eventually set to -1 to disable jog led blink.

The pitch slider let you adjust pitch.

PITCH +/- buttons let you temporarily adjust the the speed one step higher/lower. These buttons, when used with shift, let you *control effects*.

Effects Section

The effect section let you control the first two EffectUnits. There are two different effect modes mapped:

- Multi Effect mode (the default), where you can load up to three effects in each EffectUnit and control then with the super knob
- Single Effect mode, where you can load a single effect in the Effect Unit and control the first 6 parameters

Control	Multi Effect mode	Single Effect mode
FX1	Turn left to disable effect 1	Effect parameter 1
FX2	Turn left to disable effect 2	Effect parameter 2
FX3	Turn left to disable effect 3	Effect parameter 3
SHIFT + FX1	select effect 1	Effect parameter 4
SHIFT + FX2	select effect 2	Effect parameter 5
SHIFT + FX3	select effect 3	Effect parameter 6
BEATS (turn)	SuperKnob	dry/wet knob
BEATS (push)	Toggle Effect Unit	
SHIFT + Beats (turn)	Dry/Wet knob	Select Effect Chain
SHIFT + Beats (push)	Eject Effect Chain	

You can choose which deck you want to apply EffectUnit 1 and 2 by pressing SHIFT + PITCHBEND - / SHIFT + PITCHBEND + on that deck (short press).

To switch from Single Effect mode to Multi Effect mode, hold down SHIFT and press PITCHBEND - for more than a second to switch to "Single Effect mode" or PITCHBEND + for more than a second to switch to "Multi Effect mode". The corresponding led will blink three times, indicating which mode you switched to.

Pad Section

Mode A - Cue points and Loops

Control	Description
Pads 1-4 (top row)	Press an unlit pad to set a new *cue point*. If it is already set, jump to this cue point.
SHIFT + Pads 1-4 (top row)	Deletes cue points.
Pads 5-8 (bottom row)	Press the pad to activate a loop. Loop length (in beats) is respectively 1, 2, 4 and 8 beats.
SHIFT + Pads 5 (bottom row)	Sets a loop length. Push to define loop start, release to define loop end.
SHIFT + Pads 6 (bottom row)	Shortens (half) the loop.
SHIFT + Pads 7 (bottom row)	Lengthens (double) the loop.
SHIFT + Pads 8 (bottom row)	Replays the loop.

Mode B - Samplers

Mode B let you control 8 samplers. Top row is for sampler 1-4 and bottom row is for sampler 5-8, each sampler controlled by a pad button.

Press an unlit pad to load the track selected in the library to that sampler. Pads are red when the sampler is loaded but not playing and purple when playing.

Press a red pad to play the sample from its cue point. Press a purple pad to jump back to the sample's cue point.

Press a purple pad with shift to stop a playing sample. Press a red pad with shift to eject a sample.

Split mode

Split mode is activated by pressing mode A and mode B buttons simultaneously. The two leds A and B are lit together. In this mode, to top row is configured in mode A, and the bottom row if configured as the top row of mode B.

So in this mode, you can control 4 cue points and 4 samplers.

17.1.107 Reloop Beatpad

The **Reloop Beatpad** is a conventional 2 channel controller that is primarily designed to work with algoriddim's djay on the iOS platform and more recently on the Android platform, but can also be used with Mixxx by sending MIDI signals to a computer with a USB cable.

- Manufacturer's product page
- Forum thread

New in version 2.0.

Mixer Section

Crossfader

Blends audio between left and right mixer channels.

Volume Faders

Adjust the Volume of each channel. If *Fader Start <reloop-beatpad-trackselect>* is enabled the deck will stop at the previously used Cue if the Volume Fader reaches the minimum position and will start playing if the Volume fader moves from the minimum position.

1 and 2 (Track select buttons)

- **Load a track:** Press these buttons to load the selected track from the Browser to left or right deck. The LED of the button will be on if the deck is loaded.

- **Eject:** Hold the same button for more than half of a second to unload the same deck.

- **Fader Start:** Hold *SHIFT* down and then press one of these buttons to enable the **Fader Start** on a deck. The LED of the button will blink if Fader Start is enabled. If Fader Start is enabled the deck will stop at the previously used Cue if the Volume Fader reaches the minimum position and will start playing if the Volume fader moves from the minimum position.

PFL (symbolized by a headphone)

- **PFL: **Press these buttons to send each channel to the Headphones Output channel for pre-listening.

- **Slip mode: **Hold *SHIFT* down and then press these buttons to activate/deactivate Slip Mode. When active, the playback continues muted in the background during a loop, scratch etc. Once disabled, the audible playback will resume where the track would have been.

- **Quantize mode:** Hold *SHIFT* down and then press these buttons to activate/deactivate the Quantize mode. When active, it aligns Hot-cues and Loops to the next beat from the current position.

Equalizer

- **LOW:** Adjust the Low (Bass) frequencies for each mixer channel.

- **MID:** Adjust the Mid frequencies for each mixer channel.

- **HIGH:** Adjust the High (Treble) frequencies for each mixer channel.

- **GAIN:** Adjust the Gain of each mixer channel.

- **MASTER:** Adjust the level of the Master Output.

- **Cue Mix (Hadphones mixing):** Adjust how the Channels and the Master Output blend at the Headphones Channel.

- **Phones (Hadphones level):** Adjust the Volume Output of the Headphones Channel.

- **AUX:** Adjust the Volume of the AUX Input.

The MASTER, Phones, and AUX knobs adjust the levels of the Beatpad's sound card; they do not control the software gains in Mixxx so the changes are not visible on screen.

REC

- **Record:** Use this button to start/stop recording your mixing session.

- **End track warning:** Hold *SHIFT* down and then press this button in order to toggle **on** or **off** the red flashing of the *jog wheels* when the playback reaches the end of the track.

Browse Knob

Scroll through your library.

- **Turn** to select a track in the song list.

- **Push** to load the selected track into first stop deck.

- *SHIFT*+**Turn** to select a folder or subfolder in the left item list sidebar.

- *SHIFT*+**Push** to open/close folders and subfolders in the left item list sidebar.

Deck Controls Section

SHIFT

Press and hold one of those buttons to access secondary functions of other controls on the Beatpad. The secondary functions can be accessed while the **SHIFT** button is held down. If the **SHIFT LOCK** switch on the back side of the Reloop Beatpad is on, the secondary functions can be accessed after the button **SHIFT** button is released and until the **SHIFT** is pressed again.

PLAY/PAUSE

- **Play/pause:** Press to play/pause the track. If there was no track loaded into the deck and a track is selected in the library, it is loaded and starts playing.

- **Censor:** Hold *SHIFT* down and then press this button to play the track in reverse. When released the track will continue to play from the position it would have been if the button was never pressed. In other words, it enables reverse and slip mode while held.

JUMP

- **While playing, or stopped:** If the Cue point is set, seeks the player to it and starts playback.

- **Brake:** Hold *SHIFT* down and then press this button to stop the track with a gradual brake. If the **JUMP** button is released before the track has completely stopped, the track is then played back to its regular speed.

- **Spinback:** see the *Instant FX* usage.

SET

- **While playing:** Seeks the track to the cue-point and stops.

- **While stopped:** Sets the cue point (Pioneer/Mixxx mode) OR preview from it (Denon mode). If the Cue point is already set at the current position of the track, hold this button to play the track and release it to return to the Cue point and pause it. To continue playback without returning to the Cue Point, press and hold the **SET** Button, then press and hold the *Play/Pause* Button and then release both buttons.

- **Key lock:** Hold *SHIFT* down and then press this button to enable/disable the Key-lock.

Hint: Change the default cue mode in Preferences -> Interface. The Pioneer mode is the more consistent with the Reloop Beatpad.

SYNC

- **Press once** to synchronize the tempo (BPM) and phase to that of the other track.

- **Press twice quickly** to play the track immediately, synchronized to the tempo (BPM) and to the phase of the other track, if the track was paused.

- **Sync Lock:** Hold for at least half of a second to enable **sync lock** for this deck. Decks with sync locked will all play at the same tempo, and decks that also have **quantize** enabled (which is enabled by default by the mapping) will always have their beats lined up. **Note :** the **quantize** mode is not mapped on the controller but can be enabled/desabled from Mixxx.

Jogwheel

Touch sensitive platters for scratching (Scratch mode/iCut mode), bending (Scratch mode/CD mode) or Seek mode.

The jogwheel offers multi-color leds, which will show the playing marker (Scratch mode), the song progress bar (in Seek mode), and other colored combinations depending on the applied effect, loop, loop roll or Filter. If no track is loaded, the jogwheel displays a red cross. At the end of a track, the jogwheel is flashing red faster and faster until it reaches the end of the track (full steady red).

You can toggle on/off this behavior with *SHIFT* + *REC*.

Scratch mode

Toggle with the **JOG SCRATCH** button.

Use the jogwheel to scratch and the outer ring to bend (like in *CD mode*).

- **iCut mode:** Hold *SHIFT* down and scratch to scratch in "automagic" scratch mode. When the jog wheel is turned back, the crossfader is closed. When the jog wheel is turned forward, the crossfader opens. (Note that the Algoriddim djay mapping actually closes/opens the crossfader quickly without taking into account the direction of the wheel, contrary to what the Beatpad's Quick Start guide says.)

Seek mode

Toggle with the **JOG SEEK** button.

Use the jogwheel to navigate through the track.

CD mode

Deactivate both the *Scratch mode* and the *Seek mode* to enable this mode.

Use the jogwheel to temporarily bend the pitch of the track (which only affects the tempo with keylock on).

PITCH BEND

- **Pitch bend:** Use these buttons temporary slow-down/speed up the tempo of the track. Once the buttons are released the track will continue to play at the tempo designated by the pitch fader.

- **Beat Jump:** Hold *SHIFT* down and then use these buttons to jump 1 beat backwards or forward.

PITCH

Controls the track's pitch. With keylock on, this only changes the tempo. The red LED indicates that the pitch fader of the unit is on zero (center) position.

Loops Section

- **Loop size:** Turn the encoder to select the number of beats for a loop. Turn it counterclockwise to half the size of the loop and clockwise to double it.

- **Loop move:** Hold *SHIFT* down and then use the encoder to move the triggered loop forward or backwards by 1 beat.

- **Activate/deactivate:** (Acts exactly like the *LOOP* Button)

- **Regular loop mode:** Push (and release) the encoder to trigger a loop of the selected size

- **Roll loop mode:** Press (and hold down) to trigger a momentary rolling loop of the selected size. While the encoder is held down, the track will keep moving forward as if it was not looping, so when the encoder is released, it will jump forward to where the track would have been if the rolling loop was never enabled. In other words, this is a regular loop in slip mode.

- **Toggle loop mode:** Hold *SHIFT* down and then push the encoder to toggle between Regular and Roll Loop mode.

See also:

Rolling loops can be set using the *Bounce Loop (Roll) mode*.

Effects Section

FX ON

Push (and release) this button to trigger the selected effect chain for the corresponding deck (toggle function).

FX SELECT

- **Select:** Use this encoder to select an effect for the current selected rack.

- **Temporary effect:** Push and hold the encoder to temporarily apply the effect of the current selected rack for the corresponding deck (while pressed).

- **Quick Effect:** Hold *SHIFT* down and then push the encoder Activate or Kill the **Quick Effect**. You can change the Quick effect assigned in Mixxx, via Options -> Settings-> Equalizers -> Quick Effect.

FX PARAM

- **SUPER:** Use this knob to control the **SUPER** parameter of the effect for the current selected rack.

- **MIX:** Hold *SHIFT* down and then use this knob to control the **MIX** parameter of the effect for the current selected rack.

FILTER

- **Quick Effect:** Use this knob to apply the Quick effect (by default, this is Filter, but you can change it) to the deck. In middle position no effect is applied for filter.

- **Key:** Hold SHIFT down and use this knob to adjust the key (pitch) of the track without changing the tempo. In middle position the track will have its original key.

Pads Section

The 4 Performance Pads offer 4 different modes, depending on the 4 PAD MODE buttons just above.

HotCues mode

CUE

Press the **CUE** mode button to set the PADs to HOT CUE mode.

Pads

- **Press** each one of the 4 pads to assign a Hot Cue Point (1 to 4) or returns the track to that Hot Cue Point. When a Hot Cue Button is unlit, you can assign a Hot Cue Point by pressing it at the desired point in your track. Once it is assigned, the Hot Cue Button will light up blue.

- ** *SHIFT* + Press** to delete its assigned Hot Cue Point.

Bounce Loop (Roll) mode

BOUNCE LOOP

Press the **BOUNCE LOOP** mode button to set the PADs to Loop Roll mode.

Pads

Press (and keep down) any of the 4 pads to trigger a momentary *Loop Roll* of a different size (in beats) as per the table.

====================+++++===================== === === === === Pads 1 2 3 4 Press 1/8 1/4 1/2 1 *SHIFT* + Press 2 4 8 16 ==========++============================== === === === ===

Once the PAD is released the track will continue to play from the position it would have been if the Loop Roll was never triggered. The size of the applied Loop Roll can be adjusted with the *LOOP SIZE* encoder as well. Pads change the "selected loop size" introduced in *LOOP SIZE* and *LOOP* sections.

Instant FX mode

Instant FX

- **Press** this button to set the PADs to Effects mode.

- **Spinback:** Hold *SHIFT* down and then press this button down in order to stop the track with a backward brake effect. If the Instant FX button is released before the track has completely stopped, the track is then played back to its regular speed, in the forward direction.

- **Brake :** see *JUMP* button usage

Pads

- **Instant FX:** Press (and keep down) any of the 4 pads to apply momentarily the effect of the corresponding effect rack. The parameters of these effects can be adjusted from the *FX PARAM* knob.

- **Current effect rack selection:** Hold *SHIFT <reloop-beatpad-shift>* down and then press any of the 4 pads to select the current effect rack for this deck that will be used for effect selection or for the corresponding effect to be triggered later on (see *Effects Section*). this can also be done with a visual feedback in *Sampler mode*.

Sampler mode

Note: On account of the Reloop Beatpad limitations (bug ?), lights will not show on in Sampler mode when the controller is in *SHIFT* mode.

Press the SAMPLER mode button to set the PADs to cycle between 4 sub modes:

- **Sampler mode** (orange LEDs): each pad triggers a sample from the selected Sampler bank. The PADs wgich are lit indicate which samples are loaded and ready to use. While a sample is playing, the corresponding PAD changes its color to pink.

- **Sampler bank selection mode** (pink LED): each pad selects 1 of the 4 sampler banks. The PAD that is lit indicates which bank is active.

- **Loop mode** status and selection (magenta LEDs): press any pad to toggle between *regular loop mode* and *roll loop mode*. **Regular loop mode** is symbolized by the left PAD lit, representing the loop), and all the others switched off. **Roll loop mode** is symbolized by both the left (representing the loop) and the right PADs lit (symbolizing the position after the loop where the track will continue to play when the loop will be triggered off).

- **Effect rack selection** mode (purple LED): each pads selects 1 of the 4 effect racks. The PAD which is lit indicates which effect rack is active (see *Effect Section*).

Troubleshooting

Grounding problem

If your controller randomly freezes or your iPad or Android tablet acts weirdly (screen flashing, bad sound), make a home made, grounded power cable.

Controller not detected by Windows

If you see a yellow exclamation point (!) in the Windows Device Manager indicating that the drivers did not start, unplug the power cable from your laptop then unplug/replug the USB cable from your controller. If that does not work, restart your laptop without the power cable plugged in.

17.1.108 Reloop Digital Jockey 2 Controller Edition

- Manufacturer's product page
- Forum thread

New in version 1.8.

Note: Unfortunately a detailed description of this controller mapping is still missing. If you own this controller, please consider contributing one.

17.1.109 Reloop Digital Jockey 2 Master Edition

- Manufacturer's product page
- Forum thread

New in version 1.8.

Warning: This device is not USB *MIDI* class compliant. Its signals are translated to *MIDI* by special drivers on Windows and macOS. There is no driver available for Linux.

Note: Unfortunately a detailed description of this controller mapping is still missing. If you own this controller, please consider contributing one.

17.1.110 Reloop Jockey 3 Master Edition

The Reloop Jockey 3 Master Edition is a 2 Channel Controller with the option to control 4 Channels. It has a built-in sound card with 6 channels in and 4 channels out. It features both balanced 1/4" and unbalanced RCA main outputs plus RCA booth outputs with an independent volume control. It can also be used as a stand-alone mixer, or used to mix an analog source with music files in Mixxx. This device requires a power adapter in addition to the USB cable.

- Mixxx Forum Thread
- Manufacturer's product page
- Manufacturer's manual

New in version 2.1.

Warning: This device is not USB *MIDI* class compliant. Its signals are translated to *MIDI* by special drivers on Windows and macOS. There is no driver available for Linux.

Setup

The Mixxx mapping uses the same settings as Reloop's Traktor mapping. Leave the MIDI channels as the default 1-4. If you have problems with the jogwheels, set the jogwheel resolution to 2048. (Please read the manual of this Controller section **5.1** and **5.1.2**)

Set the Input 1 and Input 2 switches on the front side of the Jockey 3 ME to SW.

Mixxx Sound Hardware Preferences

- Main output: channels 1-2

- Headphone output: channels 3-4

- Auxiliary or vinyl input 1: channels 1-2

- Auxiliary or vinyl input 2: channels 3-4

- Microphone input: channels 5-6

Mapping Description

Mixer Section

- **Trax encoder**: scroll through library. With shift, scroll through sections on the left side of the library. Push to toggle big library.

- **Load button**: load selected track into active deck

- **Deck switches**: select between controlling deck 1/3 or analog input 1 on the left; select between controlling deck 2/4 or analog input 2 on the right. Note that the analog inputs are only affected by the mixer controls but not the other deck controls.

- **Gain**: set *deck gain*

- **High/mid/low**: adjust EQ for high/mid/low frequencies

- **Master/booth/phones**: control the Jockey 3 ME's sound card. These knobs do not send MIDI messages or adjust values in Mixxx, so turning them will not change anything on screen. Use these but *don't change the software knobs on screen in Mixxx*.

- **Headphones**: play deck on headphone output

- **Cuemix**: Fade between PFL and main output on headphones

- **Vertical faders**: deck volume

- **Level meter LEDs**: show the level of the deck

- **Crossfader**: fade between decks

- **Crossfader curve** (front side of controller): Adjust crossfader curve between fade and cut.

Transport Section

- **Play/pause**: play/pause or, with shift, toggle keylock
- **Cue**: behavior depends on *cue mode set in Mixxx preferences*. With shift, it does not work as labeled; it toggles quantize.
- **Cup**: Like Cue, but it plays only after releasing the button.
- **Sync**: toggle sync lock. With shift, it does not work as labeled; it toggles microphone talkover.

Jogwheels

Set the jog wheel mode by pressing one of the 4 buttons beside the jog wheel, below the trash and 5-8 buttons.

- **Off**: By default, all mode buttons are off. In this default mode, moving the jogwheel temporarily bends the pitch, regardless of whether it is moved from the top or the side.
- **Scratch**: Move the wheel from the top to scratch. Touch the outside rubber ring to temporarily bend the pitch.
- **Pitch bend**: Move the wheel to control the SuperKnob on EffectUnit of this Deck. FIXME (Maybe a Touch Control?)
- **Search**: Search position in file quickly. Touch stops the Deck.
- **Trax**: Not Mapped. FIXME (No Plans)

Hotcue Section

Press an unlit hotcue button to set that hotcue at the current position. Press a lit hotcue button to jump to that hotcue. To delete a hotcue, hold the Trash button while pressing a hotcue. To toggle between hotcues 1-4 and 5-8, press the 5-8 button.

Loop Section

- **Length encoder**: Press to activate a 4 beat loop. Double or half the beats of the loop by turning
- **Move encoder**: Move a track 4 Beats forward or backward. Push, hold and Turn it to halve or double the value of 4 Beats.
- **Loop button**: Turn on/off a Loop that is set from Length encoder. With shift, sets the start position of a loop.
- **Reloop button**: Repeat the entire file. With shift, sets the end position of a loop.

Other controls

- **Filter**: turn to apply a highpass or lowpass filter. On Deck A, press Shift and turn Filter to adjust the Gain of the Microphone
- **Pan**: On Deck A, turn to fade between the left and right speakers on the main output. (Balance)
- **< Beat**: Beatjump by one beat back. With shift, moves the beatgrid lines further from each other (lower BPM by 0.01)
- **Beat >**: Beatjump by one beat forward. With shift, moves beatgrid lines closer to each other (raise BPM by 0.01)
- **Pitch fader**: adjust playback rate of deck (with keylock, only adjusts tempo and not pitch)

- **+/-**: Pitch temporarily faster or slower.
- **FX 1**: Shift - (Minus) does not function as labeled. It aligns the beatgrid with the current play position.

Effect Section

The effect section controls the effect chain with the same number as the deck selected by the deck switch, although any effect chain can be applied to any deck.

- **Dry/wet**: adjust how much the effect is applied. With shift, turn to select different effect chain presets
- **FX Param**: adjust effect parameters 1-3 for the first effect in the chain.
- **Press FX Param 1-3 + Shift**: edit how effect parameters are linked to the superknob. The effect selected corresponds to the number of the FX Param encoder pressed. For example, pressing FX Param 2 with shift on deck 3 edits Effect2 of the EffectRack3. Each encoder press with shift changes what is being edited:
    - Select which effect parameter to edit
    - Select a [[effects framework#linking values|superknob link type between 0 and 4]] for the parameter selected on the first press
    - Select whether the [[effects framework#linking values|superknob link is inverted]] for the parameter selected on the first press
    - Close superknob link editing mode
- **FX on**: enable/disable effect chain
- **FX B1/2/3**: enable/disable effect 1/2/3 on this chain
- **Preset 1-4** (shift+effect buttons): apply effect chain to that deck number

17.1.111 Reloop Terminal Mix 2/4

- Terminal Mix 2 product page
- Terminal Mix 4 product page

The Reloop Terminal Mix 2 and Terminal Mix 4 use the same mapping in Mixxx.

New in version 1.11.

Sound hardware

The Reloop Terminal Mix 2 and Terminal Mix 4 have integrated multichannel sound cards. Usually, the TerminalMix runs very well with USB power only. If you experience issues especially when powering both main and booth outputs at high levels you should use the additional power supply (6v/1.5A). The official manual from Reloop states not to operate the unit at temperatures below 5°C/41°F as it might damage A/D converters and other components. However, the audio output may already start crackling if the temperature drops below 10°C.

Inputs

Both TerminalMix 2 and 4 have a microphone and a switchable line/phono input that can be routed into Mixxx. The Microphone jack is at the front side of the controller, the RCA line jacks are at the back next to the line/phono switch. For both inputs there is a gain knob and a switch on the controller's front side that toggles between routing the signal to the computer (SW) or mixing it directly with the main output (MST). MST allows to play music from external sources without any software, for example while setting up Mixxx software. Switch to SW if you want to use the line signal for vinyl control or AUX input, or if you want to record the microphone input with Mixxx, broadcast it, or put on effects.

Outputs

At the front, there are two headphone jacks (1/8" and 1/4"), both affected by the hard-wired TONE knob. At the back, there are unbalanced outputs for booth and main (RCA), as well as a balanced main output (1/4"). The output level of both main outputs, booth and headphone outputs are all controlled by respective hard-wired knobs in the center column which can't be mapped to software.

Controller hardware / Maintenance

The jog wheels' touch sensitivity can be adjusted separately. Refer to the official manual for instructions.

When used in dusty environment for a while you might find the MIDI LED flickering although you didn't touch any of the controls. This is mostly due to dust/fuzz particles in the 'comb' at the jog wheels' underside that is distracting the IR light barriers that detect platter movement. Remove the particles with a vacuum cleaner, or blow into the gap between wheel and housing.

After a few years of heavy usage the buttons and sliders may start to wear out. Then, buttons need to be pressed harder or in a different manner than what was working before, and sliders may send false values when they are actually in the 'off zone'. Luckily, the buttons are standard parts and relatively easy to replace, and the sliders' conductive surface can be cleaned with Q-tips and alcohol.

Mapping options

The mapping the following customization variable at the top of the script you can set to your liking:

- `pitchRanges`: Set the pitch slider range each time you toggle it.

Just open the `Reloop Terminal Mix 2-4.js` file in your favorite text editor and you'll see these variables right near the top. Edit and save and Mixxx will automatically reload the mapping.

Deck controls

The controls are the same on both sides of the controller. The left side controls Deck 1 or 3 and the right side controls Deck 2 or 4.

- RANGE button - Toggles the pitch slider range. See *Mapping Options*.
- KEYLOCK* button - Toggles key lock.

FX Controls

This mapping uses the *Standard Effects Mapping* to control the FX units.

Note: These knobs and buttons don't switch to decks 3 and 4.

- FX1/2/3 knobs

    - control the Meta knob of each effect

    - focused effect: control the first three knob parameters of the focused effect

- ON buttons

    - Press: toggle the effects

    - Press + hold: temporarily toggle an effect

    - focused effect: control the first three button parameters of the focused effect

- BEATS encoder

    - Turn: adjust the Wet/Dry knob of the effect unit

    - Press repeatedly: adjust the BPM (not the pitch/speed!) of the loaded track

    - SHIFT + Press: move the nearest beat marker to the current play position

- TAP button

    - LED flashes on each beat

    - Press + hold, then press any ON button to focus the respective effect

    - SHIFT + Press: switch between FX units 1/3 (left FX section) and 2/4 (right FX section)

Loop Controls

- LENGTH knob

    - Turn: double or halve the current *loop size* (beats) visible in loop size spinbox in each skin.

    - Press: set and activate a loop of *loop size*

- SHIFT + Press: re-activate the previous loop

    - play position behind loop-out: jump to loop-in point and play loop from there

    - play position before loop: activate loop, keep playing and enter loop when play position crosses loop-in marker

- IN / 1/2x button

    - Press: set the loop in point, flashes when a loop is active

    - Press + hold: drags the loop in point of an active loop

- OUT / 2x button

    - Press: set the loop out point, flashes when a loop is active

    - Press + hold: drags the loop out point of an active loop

- MOVE knob

    - Press + turn: adjust the //beatjump size// visible in beatjump spinbox in each skin

---

- Turn with no active loop: jump back or forth in the track by beatjump size

- Turn with active loop + Quantize OFF: move the loop position by 1/8 beat per detent (helpful to correct the loop in point in case it's set slightly too early or too late)

- Turn with active loop + Quantize ON: move the loop position by one beat per detent (helpful to correct the loop in point in case it snapped to the wrong beat marker)

- SHIFT + turn with active loop: shift the loop back or forth by beatjump size

Hot cues / Sampler buttons

- Hot cue buttons 1-4

  - LED: lit if a hot cue is set

  - Press: set or recall a hot cue

  - Press + hold when deck is stopped: play from hot cue as long as button is pressed. Press Play to continue playing after releasing hot cue button

  - Press + hold when deck is playing: jump to hot cue and play from there

  - SHIFT + press: delete the hot cue

- ▶ 1-4 Sampler buttons

- LED: lit when a sample is loaded to the corresponding sampler, flashes when that sampler is playing.

- Press: play the sample from the beginning

- SHIFT + Press: stop the sample

- ✂ (scissors) button - Switches hot cues 5-8 and samplers 5-8

Wheel & Vinyl button

- Vinyl/Search button

- Press + release: toggle scratching with the wheel (LED On)

- Hold down + turn the wheel: seek through the track

- Wheel

- Vinyl mode ON

  - Touch the top black area + turn: scratch the current track like a vinyl record

  - Touch gray rim only + turn: perform a temporary pitch bend

- Vinyl mode OFF

  - Touch wheel anywhere + turn: perform a temporary pitch bend

Transport buttons

- ►◄ (Sync) - Synchronizes the tempo and beat phase of this deck to that of the other.

- CUP (Cue-Play) Start playback from the cue point (also known as stutter play)

- Q (Cue)

    - LED: lit or flashes when play position is at cue point, depending on the *cue mode*.

    - Press: Set or recall the main cue point on the track

    - Press + hold: play from Cue point. Release stops playback

- ►|| (Play/Pause) Toggle playback of the track

- SHIFT + ►◄ (left deck) / SHIFT + ►|| (right deck)

    - initiate the brake effect for the respective deck: track slows down to full stop.

- Touch wheel, Vinyl mode ON: track speed jumps back to normal (considering the pitch slider) and playback continues as soon as the wheel is released. Open the `controllers/Reloop Terminal Mix 2-4.js` file and look for `TerminalMix.brake` to adjust parameters.

- 3 / 4 button - When lit all deck buttons (except FX controls) control deck 3 (deck 4 respectively).

Mixer controls

Channel strips

The below controls adjust the specified parameter of the respective virtual deck.

- GAIN knob - Adjusts the pre-fader gain

- HIGH/MID/LOW EQ knobs - Adjust the volume of the respective frequency range

- FILTER knob - Adjust the QuickEffect Meta knob (default: filter)

- Headphone button - Toggles hearing the deck in the headphone output

- 1 / 2 / 3 / 4

    - Press: load the currently highlighted song into that deck.

    - SHIFT + press: toggle fader-start (on the channel fader and cross-fader when applicable.) The button flashes when fader-start is enabled on that deck.

- Channel slider - Adjust the output volume

The below controls are not deck-specific.

- MASTER knob - Adjust the main output volume of the internal sound card. *(Hard-wired knob, does not send MIDI messages)*

- BOOTH knob - Adjust the booth output volume of the internal sound card. *(Hard-wired knob, does not send MIDI messages)*

- PHONES knob - Adjust the headphone output volume of the internal sound card. *(Hard-wired knob, does not send MIDI messages)*

- CUE MIX knob - Adjust how much of the headphone bus vs the main output you hear in the headphones.

- SAMPLER VOLUME knob - Adjusts the volume of all of the samplers at once.

- CRATES button - Does nothing at the moment. (Mixxx's library doesn't yet support direct panel selection.) Use the MIDI Learning Wizard to assign an action.*

- VIEW button - Does nothing at the moment. Use the MIDI Learning Wizard to assign an action.* - PREP button - *Does nothing at the moment. Use the MIDI Learning Wizard to assign an action.*

- BACK button

  - Press: move the highlight in the active library panel to the right

  - SHIFT + Press: move the highlight to the left

- TRAX knob

  - Turn: move the highlight up/down by one line

  - SHIFT + turn: move the highlight one page up/down

  - Press while Tree panel has focus: expand an item if possible. If item can't be expanded further, it is selected and and highlight is shifted rightwarde to the respective tracks table.

  - Press while tracks table has focus: perform the Track Load Action specified in *Preferences ▸ Library* (default: load track to next empty deck)

- Volume Level Meter

  - LEDs display the hardware (!) volume of the main output (2 blue LEDs at the top indicate clipping)

  - *Attention:* the main volume might already clip in Mixxx before the hardware LEDs light up. You can adjust the hardware main volume knob and target loudness in *Preferences ▸ Normalization ▸ ReplayGain* to keep enough headroom for the main volume in Mixxx and make the lower blue LEDs light up when the main volume clips in Mixxx

- POWER LED (red)

- MIDI LED (blue)

  - Flashes when a MIDI messages was sent

  - When it flashes although no control is touched, it's probably due to dust in the jogwheels (See *Controler Hardware / Maintenance*)

- Shift Lock switch at the back side

  - ON: press SHIFT buttons once to switch to secondary button/knob actions

  - OFF: press & hold SHIFT buttons to switch to secondary button/knob actions

Cross-fader section

Move the cross-fader to smoothly fade between the decks assigned to either side.

Deck assign switches (Terminal Mix 4 only)

Use the four switches on the front of the unit to choose on which side of the cross fader that deck will be heard. (Note that the fader-start functionality correctly follows this assignment.) If "thru" is selected, the cross-fader will not affect the audio from that deck and it will always be heard.

Curve adjust

Use the knob to adjust the curve from a smooth fade to a fast cut.

The remaining controls on the front of the unit adjust hardware parameters and are not MIDI-mappable.

17.1.112 Roland DJ-505
Fig. 69: Roland DJ-505 (schematic view)

The Roland DJ-505 is an all-in-one USB *MIDI* controller with an integrated audio interface. It has controls for 2 decks that can be toggled between decks to play with 4 decks. It also features a TR-S step sequencer with sounds from the TR-808 and the TR-909 drum machines (TR-606 and TR-707 are available via firmware update).

- Manufacturer's product page

- Serato DJ Hardware Page

- Owner's Manual

- Driver/Firmware/TR-S Samples Download Page

- Mapping Forum Thread

New in version 2.3.0.

Changed in version 2.4.0: Added Saved Loop mode and improved Cue Loop Mode.

Drivers

You can download the latest Windows & MacOS drivers and firmware from the manufacturer's website. Since the DJ-505 is a USB class compliant MIDI and audio device, the device is plug-and-play on Linux.

Audio Setup

The mapping relies on the following channel assignments (for line/phono input support, applying effects to the TR-S output, etc.):

Output Channels	Assigned to
1-2	Main
3-4	Headphones

Input Channels	Assigned to
1-2 (CH 1 Line/Phono)	Vinyl Control 1
3-4 (CH 2 Line/Phono)	Vinyl Control 2
5-6 (Mix)	Record/Broadcast
7-8 (TR-S output)	Auxiliary 1

The microphone, TR-S drum machine, and external inputs are mixed together in input channels 5-6, so Mixxx can record and broadcast them.

The knobs for MASTER LEVEL, BOOTH LEVEL, PHONES VOLUME, MIC LEVEL, TR/SAMPLER LEVEL and CUE/MASTER MIXING are controlling the hardware mixer of the built-in audio interface. Hence, turning the knobs will not change values in the Mixxx *GUI* and you'll need to set the Mixxx knobs to their default values when using the controller:

- Set the main/booth/headphones/microphone/aux channel levels to 100% (knob center position)

- Set cue/main mixing to cue-only (leftmost position)

Note: You should assign the *Vinyl Control* input channels even if you do not intend to use timecode vinyl. These channel assignments are also needed to make the CH 1/2 PC/LINE/PHONO switches work (i. e. passing through line or phono input to the left/right deck).

Controller Mapping

The control numbering in the schematic drawings matches the those found on the specified page in the Owner's Manual.

Browser Section (p. 4)
Fig. 70: Roland DJ-505 (browser section)

No.	Control	Function
1	LOAD buttons	Load song into deck.
1	SHIFT + LOAD button (left)	Sort library by BPM (press repeatedly to toggle ascending/descending order).
1	SHIFT + LOAD button (right)	Sort library by key (press repeatedly to toggle ascending/descending order).
2	Rotary Selector	Turn to move tracklist cursor up/down. Press to load and play/pause currently selected track on preview deck. Hold and turn to seek in track on preview deck.
2	SHIFT + Rotary Selector	Turn to move sidebar cursor up/down. Hold and turn to change track color of currently selected track.
3	BACK button	*Not yet mapped.*
3	SHIFT + BACK button	Sort library by title (press repeatedly to toggle ascending/descending order).
4	ADD PREPARE button	(Un-)Maximizes the library view.
4	SHIFT + ADD PREPARE button	Sort library by artist (press repeatedly to toggle ascending/descending order).
Fig. 71: Roland DJ-505 (deck section)

Deck Section (p. 5-6)

No.	Control	Function
1	Jog Wheel (top surface)	Perform scratch operation.
1	Jog Wheel (outer edge)	Rotate to lower/raise playback speed and pitch if key lock is off).
1	SHIFT + Jog Wheel (top surface)	Search fast through the track location.
2	SLIP button	Hold to turn on slip mode temporarily or double press to turn it on permanently.
2	SHIFT + SLIP button	Toggle vinyl control mode.
3	SHIFT button	Hold down to access other functions.
4	SYNC button	Short press to match tempo and phase of other deck once. Long press to enable *Sync Lock*.
4	SHIFT + SYNC button	Short press to disable *Sync Lock*. Long press to toggle *quantization*.
5	CUE button	Specifies, plays or recalls temporary cue point.
5	SHIFT + CUE button	Returns to the beginning of the song.
6	PLAY/PAUSE button	Plays or pause the song.
6	SHIFT + PLAY/PAUSE button	Hold to play backwards.
7	Pad Mode Select	See *Performance Pads*.
8	Performance Pads	See *Performance Pads*.
9	PARAMETER area	See *Performance Pads*.
10	LOOP area: AUTO LOOP button	Set a beatloop at the current play position.
10	LOOP area: SHIFT + AUTO LOOP button	Toggle looping.
10	LOOP area: 1/2X/2X buttons	Set the loop playback length to half/double.
10	LOOP area: SHIFT + 1/2X button	Move the loop by it's length toward the left.
10	LOOP area: SHIFT + 2X button	Move the loop by it's length toward theright.
10	LOOP area: IN/OUT button	Specify loop-in/loop-out points.
10	LOOP area: SHIFT + IN button	Toggle beats quantization.
10	LOOP area: SHIFT + OUT button	Toggle looping, go to loop-in point and resume playback.
11	DECK 3/DECK 4 buttons	Switches the deck (left: decks 1 and 3, right: decks 2 and 4)
12	KEY LOCK	Toggle key lock.
12	SHIFT + KEY LOCK	Cycles through tempo slider range (8%, 16%, 50%).
13	Tempo slider	Adjust song playback speed (and pitch if key lock if off).
Fig. 72: Roland DJ-505 (mixer section)

Mixer Section (p. 7)

No.	Control	Function
1	TRIM knobs	Adjust the deck gain (prefader)
2	HI/MID/LOW knobs	Adjust the high/mid/low-frequency regions of the song.
3	FILTER knobs	QuickEffect superknob (filter by default, can be changed to a different effect in Mixxx preferences)
4	Channel CUE buttons	Toggle PFL for each channel.
4	SHIFT + CUE buttons (short press)	Adjust beatgrid so that the closest beat is set to the current cursor position.
4	SHIFT + CUE buttons (long press)	Adjust beatgrid to match another playing deck.
4	SHIFT + CUE buttons (tap repeatedly)	Set tempo by tapping on each beat.
5	Channel faders	Adjust the output level for each channel.
6	Cross fader	Fades between left and right deck.
7	MASTER LEVEL knob	Adjusts the main output level.
8	BOOTH LEVEL knob	Adjusts the output level of the BOOTH OUT jacks.
9	MIXING knob	Fades between PFL and main output in headphones
10	TR/SAMPLER LEVEL knob	Adjusts output of the TR-S (Aux 3) and Samplers 1-16.
11	TR/SAMPLER CUE button	Toggle PFL of the TR-S (Aux 3) and Samplers 1-16.
12	Level indicator	Indicate the output level of each channel and main.

Effects Section (p. 7)
Fig. 73: Roland DJ-505 (effects section)

No.	Control	Function
1	CH ASSIGN area	Toggle effect units 1/2 for decks 1/2 (3/4 if SHIFT is pressed) or the TR-S (Aux 3) and Samplers 1-16.
2-5	*Various*	See *Standard Effects Mapping*.

TR-S Section (p. 8)
Fig. 74: Roland DJ-505 (TR-S section)

No.	Control	Function
1	VALUE knob	*See Owner's Manual.*
2	SHIFT button	Hold down to access other functions.
3	Display	*See Owner's Manual.*
4	SYNC button	Match tempo of playing deck (phase matching is not implemented yet, use the NUDGE button instead).
4	SHIFT + SYNC button	*Currently not mapped.*
5-17	*Various*	*See Owner's Manual.*

Front Panel (p. 8)

No.	Control	Function
1	PHONES jacks	Connect headphones here.
2	VOLUME knob	Adjust the volume of the headphones.
3	CROSS FADER switch	Switch the cross fader response curve.
4	REVERSE switch	Switch cross fader reverse (hamster) mode on/off.
5	CH1/CH 2 switches: PC	Selects Mixxx deck as input source (Unmute the Mixxx deck and mute Aux 1/2).
5	CH1/CH 2 LINE/PHONO	Selects Line/Phono input source (Mute the Mixxx deck and unmute Aux 1/2).
6	MIC LEVEL knob	Adjust the microphone volume.

Performance Pads

You can use the Pad Mode Select buttons to select a mode for the performance pads.

Control	Mode	LED Color
HOT CUE button	Hot Cue Mode	White
SHIFT + HOT CUE button	Cue Loop Mode	Blue
SHIFT + HOT CUE button (press twice)	Prepare Mode	Red
ROLL button	Roll Mode	Light blue
ROLL button (press twice)	Saved Loop Mode	Green
TR button	TR Mode	Red
SHIFT + TR button	Pattern Mode	Green
TR button (press twice)	TR Velocity Mode	Orange
SAMPLER button	Sampler Mode	Magenta
SHIFT + SAMPLER button	Velocity Sampler Mode	Purple
SAMPLER button (press twice)	Pitch Play Mode	Green

Most pad modes are similar to those found when used with Serato. Modes that are described in the owner's manual (Slicer, Slicer Loop, Flip) but not listed below are currently not mapped.

Hot Cue Mode
Fig. 75: Roland DJ-505 (performance pads)

Bookmark positions in the track and jump to them.

No.	Control	Function
1-8	Pad (unlit)	Save current position as hot cue.
1-8	Pad (lit)	Jump to hot cue. If the track is stopped, holding the pad will preview the hot cue until the pad is released.
1-8	SHIFT + Pad (lit)	Clear hot cue.
9	PARAMETER - button	Change color of last used hotcue to the previous color in the palette.
10	PARAMETER + button	Change color of last used hotcue to the next color in the palette.
9	SHIFT + PARAMETER - button	Move beatgrid left.
10	SHIFT + PARAMETER + button	Move beatgrid right.

Cue Loop Mode

Set beatloop from a hot cue point.

No.	Control	Function
1-8	Pad (lit)	Set a beatloop at the position of the hotcue.
1-8	SHIFT + Pad (lit)	Set a beatloop at the position of the hotcue and jump to it.
1-8	Pad (unlit)	Save the current position as hot cue and set a beatloop.
9	PARAMETER - button	Halve the size of the current loop.
10	PARAMETER + button	Double the size of the current loop.
9-10	SHIFT + PARAMETER -/+ buttons	*Currently not mapped*.
Fig. 76: Roland DJ-505 (performance pads)

Prepare Mode
Fig. 77: Roland DJ-505 (performance pads)

This mode allow you to prepare tracks by setting intro/outro cues.

No.	Control	Function
1	Pad (unlit)	Set current position as intro start.
1	Pad (lit)	Jump to intro start position.
2	Pad (unlit)	Set current position as intro end.
2	Pad (lit)	Jump to intro end position.
3	Pad (unlit)	Set current position as outro start.
3	Pad (lit)	Jump to outro start position.
4	Pad (unlit)	Set current position as outro end.
4	Pad (lit)	Jump to outro end position.
5-8	Pad	*Currently not mapped*.
9-10	SHIFT + PARAMETER -/+ buttons	*Currently not mapped*.

Note: This mode has been added by the Mixxx developers and is not available in Serato.

Roll Mode
Fig. 78: Roland DJ-505 (performance pads)

The Roll Mode provides quick access to rolling loops and beatjumps.

No.	Control	Function
1-4	Pad (hold)	Play a rolling loop with the beatlength that is assigned to the pad.
5	Pad (press)	Beatjump left.
6	Pad (press)	Decrease beatjump size.
7	Pad (press)	Increase beatjump size.
8	Pad (press)	Beatjump right.
9	PARAMETER - button	Halve the size of the current loop.
10	PARAMETER + button	Double the size of the current loop.
9-10	SHIFT + PARAMETER -/+ buttons	*Currently not mapped*.

Saved Loop Mode
Fig. 79: Roland DJ-505 (performance pads)

Save and restore saved loops.

No.	Control	Function
1-8	Pad (unlit)	If a loop is enabled, save that loop into the hotcue slot. If no loop is enabled, set a beatloop from the current position and save it.
1-8	Pad (lit)	Enable saved loop.
1-8	Pad (blinking)	Disable saved loop.
1-8	SHIFT + Pad (lit/blinking)	Enable saved loop and jump to the loop start position.
1-8	SHIFT + Pad (lit/blinking, long press)	Delete saved loop from hotcue slot.
9	PARAMETER - button	Change color of last used hotcue to the previous color in the palette.
10	PARAMETER + button	Change color of last used hotcue to the next color in the palette.
9	PARAMETER - button	Halve the size of the current loop.
10	PARAMETER + button	Double the size of the current loop.

TR/Pattern/TR Velocity Modes

These modes are hardcoded in the device firmware, so they work exactly as described in the Owner's Manual.

Sampler/Velocity Sampler Play Modes
Fig. 80: Roland DJ-505 (performance pads)

The sampler modes allow you to load, play and stop samples in the first 8 sample slots.

No.	Control	Function
1-8	Pad (unlit)	Load currently selected track into the sample slot associated with the pad.
1-8	SHIFT + Pad (lit)	If the sample is playing, stop the playback. If the sample is not playing, eject the sample from the sample slot.
1-8	Pad (lit)	Play the sample in the sample slot associated with the pad. *Velocity Sampler Mode*: The playback volume of the sample depends on the pressure (velocity).
9-10	PARAMETER -/+ buttons	*Currently not mapped*.

Pitch Play Mode
Fig. 81: Roland DJ-505 (performance pads)

Play the track from a hot cue position and change the pitch in semitone steps. Pads right of the white lit pad raise the pitch, pads left of it lower it.

No.	Control	Function
1-8	Pad	Play currently selected hotcue with modified pitch.
1-8	SHIFT + Pad (dimly lit)	Select hot cue for pitch play. The pad of the currently selected hotcue pad is lit.
9-10	PARAMETER -/+ buttons	Cycles through semitone ranges (Up, Mid, Down).

Known Issues

- TR-S Syncing currently works at the *BPM* level, but phase syncing is not implemented yet. As a workaround, the NUDGE button can be used to adjust the phase. This depends on *MIDI* clock I/O (Bug #5682).

- Some performance pad modes are missing (Slicer [Launchpad Bug #9660], Slicer Loop, Flip [Launchpad Bug #9271])

- Some buttons are not mapped yet (e.g. BACK)

- LEDs on BACK/ADD PREPARE do not work (this seems to be a hardware/firmware bug and does not work in Serato either)

- Controller does not send current cross fader value on Serato SysEx Message (this seems to be a hardware/firmware bug and does not work in Serato either)

17.1.113 Sony Sixxaxis

The Sony Sixaxis is a motion-sensitive wireless game console controller.

- Forum thread

New in version 1.11.

Note: Unfortunately a detailed description of this controller mapping is still missing. If you own this controller, please consider contributing one.

17.1.114 Soundless Studio joyMIDI

Fig. 82: Soundless Studio joyMIDI (top view)

The joyMIDI is a portable 4-in-1 MIDI controller with 4 operating modes: Keyboard (MIDI), DrumPad (MIDI), DJ (MIDI) and GamePad (HID joystick). The case is 3D printed and the design files are open source on Onshape.

- User Manual (See the chapter 7.3 , DJ controller mode)

- Forum thread

New in version 2.2.4.

Mapping Description

After powering on the device, press the right button to enter the DJ controller mode.
Fig. 83: Entering the DJ controller mode on the joyMIDI.

Bank 1

Bank 2

Bank 3

Bank 4

17.1.115 Stanton DJC.4

- Manufacturer's product page
- Manual / Midi commands
- Forum thread

New in version 2.2.4.

Compatibility

This controller is a class compliant USB MIDI and audio device, so it can be used without any special drivers on GNU/Linux, Mac OS X, and Windows. However, if you wish to use the *ASIO sound API* under Windows, please install the latest driver package available from the Product page.
Fig. 84: Soundless Studio joyMIDI (bank 1)
Fig. 85: Soundless Studio joyMIDI (bank 2)
Fig. 86: Soundless Studio joyMIDI (bank 3)
Fig. 87: Soundless Studio joyMIDI (bank 4)

Sound card setup

This controller has a built-in 4 channel sound card, with MASTER output (RCA and balanced 6.3 mm TRS) and HEAD-PHONE output (6.3 and 3.5mm jack).

Output Channels	Assign to
1-2	Main
3-4	Headphones

Input Channels	Assign to
1-2 (Input 1)	Vinyl Control 1 or Aux 1
3-4 (Input 2)	Vinyl Control 2 or Aux 2

Above the **Gain** knobs are switches to select which input should be sent to the PC. For input 1 this can be Aux (3.5 mm TRS) or Line/Phono 1/2 (RCA) and for input 2 this can be microphone (6.3 mm TRS on front) or Line/Phono 3/4 (RCA).

Input 1 routing

On the rear side is a small switch to select if Input 1 is routed to the PC or directly to the main output (through). It is therefore possible to include the microphone into a recording/stream or to exclude it.

See also:

The *example setups section* provides more details about the audio configuration in Mixxx.

Hardware controls

The **Master** and **Mic Level** are hardware controls and interact directly with the integrated sound card and are not mapped to Mixxx.

See also:

The *gain staging documentation* explains how to set your levels properly when using Mixxx.

Mapping description

The knobs for MASTER LEVEL, MIC LEVEL and the MIC ON/OFF switch are controlling the hardware mixer of the built-in audio interface. Hence, turning the knobs will not change values in the Mixxx *GUI* and you'll need to set the Mixxx knobs to their default values when using the controller.

Controls

Center section

No.	Control	Function
1	SAMPLER VOLUME knob	Change the volume of all eight samplers at the same time. If the SAMPLER VOLUME is at zero hide the sampler bank.
2	BROWSER Rotary encoder	Turn to move tracklist/sidebar cursor up/down. Press to toggle between sidebar and tracklist.
2	SHIFT + BROWSER Rotary encoder	Turn to move tracklist/sidebar cursor page wise up/down. Press to (Un-)Maximizes the library view.
3	LOAD buttons	Load song into active deck (Depending on Deck select).
3	SHIFT + LOAD buttons	Open/close a tree view. Equivalent to pressing the LEFT/RIGHT key on the keyboard

Mixer section

No.	Control	Function
1	GAIN knobs	Adjust the deck gain (prefader)
2	HI, MID, LOW knobs	Adjust the high/mid/low-frequency regions of the song. Press to kill this frequency region.
3	SHIFT + LOW knob	QuickEffect superknob (filter by default). Press to (de-)activate QuickEffect.
4	Channel CUE buttons	Toggle PFL for each channel.
5	Channel faders	Adjust the output level for each channel.
6	Cross fader	Fades between left and right deck.
7	Level indicator	Indicate the output level of main.
8	CROSSFADER CURVE (front side of controller)	Adjust crossfader curve between fade and cut.
9	HEADPHONES MIX (front side of controller)	Adjusts the cue/main mix in the headphone output.
10	HEADPHONES LEVEL (front side of controller)	Adjusts the headphone output gain.

Deck section

No.	Control	Function
1	Jog dial (top surface)	Perform scratch operation if Scratch is enabled.
1	Jog dial (outer edge)	Rotate to lower/raise playback speed if Scratch is enabled (and pitch if key lock is off).
1	SHIFT + Jog dial (top surface)	Search fast through the playback location.
2	SCRATCH button	En-/Disable scratch function
3	SHIFT button	Hold down to access other functions.
4	SYNC button	Match tempo and phase of other deck.
4	SHIFT + SYNC button	Plays the track reverse as long as pressed.
4	TAP button (tap repeatedly)	Set tempo by tapping on each beat.
5	CUE button	Specifies, plays or recalls temporary cue point.
5	SHIFT + CUE button	Jumps to the cue point and stops.
6	PLAY/PAUSE button	Plays or pause the song.
11	DECK select buttons	Switches the deck (left: decks 1 and 3, right: decks 2 and 4)
12	KEY LOCK	Toggle key lock.
12	SHIFT + KEY LOCK	Toggle beats quantization.
13	Tempo slider	Adjust song playback speed (and pitch if key lock if off).
14	PITCH BEND +	Holds the speed one step (4 % default) higher while pushed.
15	PITCH BEND -	Holds the speed one step (4 % default) lower while pushed.
14, 15	SHIFT + PITCH BEND	*Not mapped.*
16	HOT CUE	Set (if empty) or Play Hot Cue Point.
16	SHIFT + HOT CUE	Unset/Delete Hot Cue Point

Loop section

No.	Control	Function
1	IN	If loop is disabled, sets the player loop in position to the current play position. If loop is enabled, press and hold to move loop in position to the current play position.
1	SHIFT + IN	Seek to the loop in point.
2	OUT	If loop is disabled, sets the player loop out position to the current play position. If loop is enabled, press and hold to move loop out position to the current play position.
2	SHIFT + OUT	Seek to the loop out point.
3	ON	Toggles the current loop on or off. If the loop is ahead of the current play position, the track will keep playing normally until it reaches the loop.
3	SHIFT + ON	Activate current loop, jump to its loop in point, and stop playback.
4	DELETE	Not mapped.
5	LOOP LENGTH /	Halves beatloop size.
6	LOOP LENGTH X	Doubles beatloop size.
7	BEAT MULTIPLIER encoder	Turn to move the loop left or right by 1 beat per click.
7	BEAT MULTIPLIER button	Sets a loop using the current beatloop size long and enable the loop.
7	SHIFT + BEAT MULTIPLIER button	Activates a rolling loop using the current beatloop size.

Sampler section

No.	Control	Function
1	SAMPLER 1-4 (left deck)	Controls Samplers 1-4 (independent of deck selection)
2	SAMPLER 1-4 (right deck)	Controls Samplers 5-8 (independent of deck selection)

Effect section

No.	Control	Function
1	ON	Toggle FX 1 for decks 1/3 (both on the left) and FX 2 for decks 2/4 (both on the right).
2-5	*Various*	See *Standard Effects Mapping*.

Tweakables

At the top of the file file:*Stanton-DJC-4-scripts.js* there are a few customizable options to change the default mapping.

Variable	Function	Default
`autoShowFour-Decks`	If a track gets loaded into deck 3 or 4, automatically show four decks in Mixxx	`false`
`showMasterVu`	If set to false, show channel VU meter instead of Main L/R	`true`
`dryWetAdjust-Value`	Amount the dryWetKnob changes the value for each increment	0.05

Known Issues

The following controls are currently not mapped:

- Loop Delete button (no matching function in Mixxx)

- X-Fader Link button

- Smart Fade button

- Smart button (Shift + Scratch)

- Video button (Shift + Smart Fade)

- FX Ctrl 1/2 fader (Shift + Channel fader)

- TX/FX Select rotary encoder

- TX/FX Action rotary encoder button

17.1.116 Stanton SCS.1d

- Manufacturer's product page

New in version 1.9.1.

Mapping description

Easy customization: We have provided the following customization variables at the top of the script you can set to your liking:

- **pitchRanges** - The pitch ranges selectable with the Range button. You can add more as you like but they must be in ascending order.

- **fastDeckChange** - If set to true, changes decks instantly by skipping the flashing lights. Useful for beat juggling on one unit.

- **globalMode** - If true, the unit will stay in the current section modes on virtual deck changes (instead of switching to the modes you were in the last time you controlled that virtual deck.) The trigger pad section always stays in the current mode regardless of this setting.

- **platterSpeed** - The speed of the platter at 0% pitch: 0=33 RPM, 1=45 RPM

- **deckChangeWait** - Time in milliseconds to hold the Deck Select button down to avoid changing decks

- **padVelocity** - If set to true, uses the velocity values when recalling cues on the trigger pads (this is toggle-able with a button on the unit as well.)

- **crossFader** - If true, uses the pitch slider to adjust the cross-fader while the Pitch Range button is held down

- **browseDamp** - Number of platter ticks to move the highlight one item when browsing the library. Set higher for slower movement. (Defaults to 3.)

- **looseLoops** - If true (default,) causes the loop buttons to set new loop points each time you press them (good for loop rolls.) If set to false, you must explicitly delete one before you can set another.

Just open the `midi/Stanton-SCS1d-scripts.js` file in your favorite text editor (Wordpad works too) and you'll see these variables right near the top. Edit & save, then restart Mixxx and enjoy.

Now let's take a look at how the controls operate, starting in the upper left and moving counter-clockwise:

Mode switch buttons

- **Setup**: *unused by Mixxx but will enter the deck's internal setup menu*

- **Control**: *unused*

- **Browse**: Allows browsing the library with the platter. Press additional times to change the category (Library, Playlists, Crates, etc.) To go backwards, press another mode button (Vinyl or Control) then Browse again.

- **Vinyl**: Take a guess! :-)

- **⇒/Enter**: Loads the currently selected track into the currently selected virtual deck

- **Deck Select**: Switches to the other virtual deck

- **⇐/Cancel**: *unused*

Transport section

- **circle button**: Toggles headphone cue

- **«**: Fast rewind

- **»**: Fast forward

- **|«***: unused*

- **»|***: unused*

- **Cue, Sync, Play/Pause**: as labeled

- **BPM**: BPM tap

Trigger Pad section

The trigger pads are used to set and recall hot cues. You can use them as you would a sampler if the target deck is stopped (where it will only play as long as you are pressing the pad) or as hot cues (if the target deck is playing.) You set a cue simply by pressing an unlit pad at the desired point. It lights green when there's a cue set and the corresponding display shows the cue point in `minutes:seconds.centiseconds` format.

- **circle buttons***above the displays: unused*

- **circle button** at the top right of the section:

- Velocity toggle: When lit red, the target deck's volume will be adjusted by how hard you strike the pads. Press this button to toggle the feature.

- Delete cues: Hold this button down and press a pad to delete the cue stored there

- **circle buttons** at the bottom right of the section: These select the cue bank for each deck. The top button chooses the bank for deck one and the bottom for deck two. There are three banks for each deck denoted by the button color: green (1), red (2), and amber (3). In this way you can recall cues/play samples on either deck at any time regardless of what the rest of the controller is doing.

Pitch slider section

- **Pitch slider**:

- Pitch adjust: directly corresponds to the slider on screen for the currently selected virtual deck. Since the slider is motorized, it will move on its own if you change decks or adjust the slider on the screen.

- Cross-fader adjust: will move to and allow adjustment of the on-screen cross-fader while the Range button is held down.

- **Range button**:

- Toggles between the pitch range values specified in the **pitchRanges** global variable mentioned at the top of this page

- When held, allows the pitch slider to be used to adjust the cross-fader (if the **crossFader** variable is set to true.) If you do this, the pitch range will not be changed when you release the button.

- **Reset button**: Resets the slider to the center position when adjusting pitch or the cross-fader.

Preset section

This section has three banks, selected by the three circle buttons at the bottom of the section.

Loop mode

Press the top circle button (Bank 1) at the bottom of the section to get into this mode. The 12 preset buttons are grouped in pairs with the left one adjusting the loop in point and the right one adjusting the loop out point.

There are two modes of operation selectable by the **looseLoops** global variable described at the top of this page:

1. **Loose Loops mode** - Works just like a CDJ and the on-screen loop controls. Use this for loop rolls.

   - **Left loop button** - Sets loop in point any time you press it

   - **Right loop button** - Sets loop out point any time you press it

   - Reloop/Exit: Hold the **Bank 1** button and press either Left or Right loop buttons to toggle the loop on and off

2. **Protected Loops mode** - Works like the hot cue section in that you must first delete a loop point before you can set another. Use this when you want to return to a pre-set loop and not worry about accidentally losing it.

   - **Left loop button** - Sets loop in point only when none is already set

   - **Right loop button** - Sets loop out point only when none is already set

   - Reloop/Exit: **Both loop buttons together** - Toggles the loop on and off

   - Delete: Hold the **Bank 1** button and press a Left or Right loop button to delete that loop point.

Instant pitch changes

The bottom two banks are used for instant pitch changes for the current virtual deck. These are useful when using the pads as samplers to further vary the sounds.

They offer the following arrangements, increasing from left to right, top to bottom:

- **circle buttons** at the bottom:

- **Middle: Key change** - Center row buttons are one semitone away from their vertical neighbors and the outside ones are three semitones away (for harmonic key changes.)

- **Bottom: Notes** - Buttons correspond to major scale notes (ala Vestax Controller One.) This is most useful with a constant-pitch sound or chord. (You can generate one in Audacity, or use the time code sound. :-))

Remember you can return to the original pitch (tonic) by pressing Reset just above the pitch slider.

Note that when you use one of these buttons, the pitch range is automatically set to 100% in order for the values to be set correctly.

Key change and Note modes were tuned with respect to 440Hz A (above middle C.)

Encoder section

Pressing any of the encoders returns the parameter to the default value.

- **circle button** to the left of the section: changes the parameter bank the encoders adjust:

- **Green**:

    - **1st encoder** (from the left): adjusts low frequency equalizer

    - **2nd encoder**: adjusts mid frequency equalizer

    - **3rd encoder**: adjusts high frequency equalizer

    - **4th encoder**: adjusts deck volume

    - **circle buttons** under each display: momentary kill buttons for the corresponding parameter

- **Red**:

    - **1st encoder** (from the left): adjusts flanger depth

    - **2nd encoder**: adjusts flanger delay

    - **3rd encoder**: adjusts flanger period (Low Frequency Oscillator)

    - **4th encoder**: adjusts pre-fader track gain

    - **circle button** under the 1st display: toggles the flange effect for the current deck.

    - //**circle button** under the 2nd display: unused//

    - //**circle button** under the 3rd display: unused//

    - **circle button** under the 4th display: toggles key lock for the current deck.

- When holding down the **Deck Select** button:

    - **1st encoder** (from the left): adjusts the cue/main headphone mix

    - **2nd encoder**: adjusts the headphone volume

    - **3rd encoder**: adjusts the main balance (pan)

    - **4th encoder**: adjusts the main volume

17.1.117 Stanton SCS.1m

- Manufacturer's product page

New in version 1.7.

Easy customization: We have provided the following customization variables at the top of the script you can set to your liking:

1. **faderStart**: If set to *true*, it allows decks to start when their channel or the cross-fader is opened. (This is also toggleable with the topmost button on the controller. See below.)

2. **scratchFactor**: Adjusts the speed of scratching with the select knob. (Defaults to **2**.)

Just open the `controllers/Stanton-SCS1m-scripts.js` file in your favorite text editor (Wordpad works too) and you'll see these variables right near the top. Edit & save.

Fig. 88: Stanton SCS.1m (top/schematic view). Image courtesy of Stanton Magnetics, Inc., overlay (c) 2009 Sean M. Pappalardo.

Deck controls

Refer to the image above, top to bottom

- **a** buttons: Sync function: change the pitch of the deck so that its BPM matches that of the other deck (assuming the pitch range is sufficient)

- **b** buttons: Toggle headphone cue

- **Gain, High, Mid, Low** knobs: as labeled

- **Pan***knob: unused*

- **c** encoders

- Rotate to increase or decrease the pitch range in 1% steps

- Press to toggle the flange effect

- **c** displays: Show the current pitch adjustment percentage. The back light color changes with the pitch range:

- Green = 1%-25%

- Orange = 25%-50%

- Red = 50% and above

- **c** A buttons: Permanently lower the pitch by 1%

- **c** B buttons: Permanently raise the pitch by 1%

- **e** sliders: Pitch adjust

- **e** buttons: Temporarily raise the pitch by 4% for as long as held (pitch bend up.)

- **g** buttons: Temporarily lower the pitch by 4% for as long as held (pitch bend down.)

- **d** encoders

- Rotate to nudge the track either direction (akin to twisting a record spindle)

- Press to toggle reverse playback

- LEDs show current track position

- **d** displays: Show the current track time remaining. They will flash slowly when less than 30 seconds remain, quickly when less than 15 seconds remain.

- **d** A buttons: Rewind

- **d** B buttons: Fast-forward

- **f** sliders: Volume adjust

- **f** buttons: Play/pause

- **h** buttons: Cue

Global controls

Refer to the image above, top to bottom

- **z** button: Toggle fader start/cue
- **Master, Headphones, Cue Mix** knobs: as labeled
- **Zone***knob: unused*
- **Gain***knob: unused*
- **i** knob: Adjust flange effect depth
- **j** knob: Adjust flange effect delay
- **k** knob: Adjust flange effect period (Low Frequency Oscillator)
- **l** knob: Adjust main pan (balance)
- **p***button: unused*
- **m** button: BPM tap for Deck 1
- **n***button: unused*
- **o** button: BPM tap for Deck 2
- **Preset** buttons: Hot cue points for the selected deck (**q** button)
- **Bank Down** button: select backward between Library, Playlist, and Browse views
- **Bank Up** button: select forward between Library, Playlist, and Browse views
- **q** button: Change which deck's hot cues are active (**Preset** buttons.) Off is Deck 1, On (red) is Deck 2.
- **r** jog wheel:
- **Browse mode**:
    - Rotate to move the track select highlight
    - Press to load the selected track into the first stopped deck, if any.   //(This is *not working <https://github.com/mixxxdj/mixxx/issues/5815>* in 1.9.x for some reason.)//
- **Control mode**:
    - Rotate to scratch the song on the selected deck
    - //Pressing does nothing//
- **Cancel** button:
- **Browse mode**: Press to load the highlighted song onto deck 1, if it's not currently playing.
- **Control mode**: hold down to enable scratching on deck 1
- **Enter** button:
- **Browse mode**: Press to load the highlighted song onto deck 2, if it's not currently playing.
- **Control mode**: hold down to enable scratching on deck 2
- //**Setup** button: unused by Mixxx but will enter the mixer's internal setup menu//
- **Control** button: Selects scratching mode for the jog wheel
- **Browse** button: Selects track browse mode for the jog wheel

(Any unlabeled controls are not currently used.)

17.1.118 Stanton SCS.3d "DaScratch"

- Manufacturer's product page
- Walk-through video!

New in version 1.7.

New in version 2.0: Alternate mapping with many more visual effects (flashing lights) and different behavior.

Default Mapping

Fig. 89: Stanton SCS.3d (layout). *Images courtesy of Stanton Magnetics, Inc.*

Easy customization: We have provided the following customization variables at the top of the script you can set to your liking:

- **pitchRanges** - Set the pitch slider range when the Pitch LED is off, blue, purple and red (in decimal values. E.g. 0.08 = 8%, 0.5 = 50%)

- **fastDeckChange** - If set to true, changes decks instantly by skipping the flashing lights. Useful for beat juggling on one unit.

- **spinningPlatter** - If set to true, uses the circle LEDs to *accurately* (*no sticker drift!*) show the track position in record revolutions, also useful for juggling.

- **spinningPlatterOnlyVinyl** - If set to true, only shows the spinning platter LED in vinyl modes. Otherwise shows in all modes except Loop, Instant Pitch Change and TRIG (because they're used for other things in those modes.)

- **spinningLights** - The number of lights used for the spinning platter effect, 1 or 2. (1 is best for juggling.)

- **VUMeters** - If set to true, shows a VU meter in the circular area for the currently selected deck when in vinyl mode. (Left for deck 1, right for deck 2.)

- **markHotCues** - Set to `"blue"` or `"red"` (with quotes) to choose which LEDs mark the stored positions in TRIG & LOOP modes

- **jogOnLoad** - If true, the unit will automatically change to Vinyl (jog) mode after loading a track (from Track Select mode)

- **globalMode** - If true, the unit will stay in the current mode on deck changes (instead of switching to the mode you were in the last time you controlled that deck.)

- **singleDeck** - If you've got more than one MIDI controller, set this to true to have the SCS.3d stay on one deck and make Deck mode non-temporary. *More on this here*.

- **deckChangeWait** - Time in milliseconds to hold the DECK button down to avoid changing decks

- **pitchAdjustment** - Adjusts the coarseness of the pitch slider (1=coarse, 3=normal, 5=fine)

- **finePitchAdjustment** - Adjusts the coarseness of the pitch slider in fine mode (1=coarser, 3=normal, 5=finer)

- **finePitchDefault** - If true, swaps normal and fine pitch modes so you can use fine pitch mode unshifted

Just open the `controllers/Stanton-SCS3d-scripts.js` file in your favorite text editor and you'll see these variables right near the top. Edit & save.

Mode buttons

- FX - Adjust & toggle Flanger effect, toggle reverse effect

- EQ - Adjust channel EQ parameters

- Loop - Loop controls and Instant pitch changes

- Trig - Hot cues

- Vinyl - Toggle between pitch bend, vinyl manipulation & scratching, and track selection

- Deck - Adjust global controls and switch to another virtual deck
Fig. 90: Stanton SCS.3d (mode buttons)

Common to all modes:

(except where noted)

- Gain slider (S1) adjusts deck volume
- Pitch slider (S2) adjusts deck pitch control
- B11 toggles headphone cue
- B12 toggles pitch range (black=8%, blue=12%, purple=50%, red=100%)
- B13 Rewind (REW)
- B14 Fast Forward (FFWD)
- PLAY starts or pauses track playback.
- CUE will jump to the cue point or set it, depending on your settings and whether the track is playing.
- SYNC synchronizes the tempo of the current deck to another. Holding SYNC for more than 1/3 of a second will enable Sync lock. (Press SYNC again to disable it.)
- Pressing TAP repeatedly will change the speed of the current deck to match your tap tempo (useful for synchronizing with an external music source.)

While holding down the current mode button:

- Gain slider (S1) adjusts pre-fader gain
- Pitch slider (S2) finely adjusts pitch control
- B11 resets pre-fader gain to center
- B12 resets pitch to center 0%
- SYNC toggles the *Quantize* function (where Cue and Loop points snap to the nearest beat and triggering them happens in time with the beat.)

FX Modes

These modes let you adjust the effect unit parameters. The FX button will be red when adjusting effect unit 1, purple for unit 2, and black for unit 3. (In Mixxx versions below 2.0.1, there is only one mode that adjusts the Flanger effect.)
Fig. 91: Stanton SCS.3d (slider mode)

- Left slider (S3) adjusts the first effect parameter
- Center slider (S4) adjusts the second effect parameter
- Right slider (S5) adjusts the third effect parameter
- B11 performs a reverse-roll (censor) while held down
- B12 toggles this effect on the current deck

Hold the FX button down and touch any slider to reset it to center.

EQ Mode
Fig. 92: Stanton SCS.3d (slider mode)

- Left slider (S3) adjusts low frequency equalizer
- Center slider (S4) adjusts mid frequency equalizer
- Right slider (S5) adjusts high frequency equalizer

Hold the EQ button down and touch any slider to reset it to center.

Loop mode (red)

The surface is configured as 11 buttons:

Left	Middle	Right
1/8-beat loop	Loop In	2-beat loop
1/4-beat loop	Reloop/Exit	4-beat loop
1/2-beat loop	Reloop/Exit	8-beat loop
1-beat loop	Loop Out	16-beat loop

Mixxx v2.0.1 and above have the left column flipped so you can adjust the loop size sequentially when moving along the circle:

Left	Middle	Right
1-beat loop	Loop In	2-beat loop
1/2-beat loop	Reloop/Exit	4-beat loop
1/4-beat loop	Reloop/Exit	8-beat loop
1/8-beat loop	Loop Out	16-beat loop

The Reloop/Exit button lights up when a loop is active. If it happens to be an exact number of beats, the corresponding beat loop button will light up as well.

Also:

- **B11** (under the Gain slider) halves the length of the current loop
- **B12** (under the Pitch slider) doubles the length of the current loop

You can exit any loop by pressing Reloop/Exit (or a lit beat loop button.)

Instant-pitch change modes (Loop button)

This offers instant pitch change buttons in the following arrangements:

Key change (purple) - Center buttons are one semitone away from their vertical neighbors and the outside ones are three semitones away (for harmonic key changes.)

Notes (black) - Buttons correspond to major scale notes (ala Vestax Controller One.) This is most useful with a constant-pitch sound or chord. (You can generate one in Audacity.)

Remember you can return to the original pitch (tonic) by pressing B12 (under the pitch slider.)

Note that when you use one of these buttons, the pitch range is automatically set to 100% in order for the values to be set correctly.

Key change and Note modes were tuned with respect to 440Hz A (above middle C.)

1.7 also offered the following since looping was not available:

Fixed increment (red) - Each button sets the pitch 3.33% above or below its vertical neighbors.

Trig Modes

These modes configure the surface as three separate banks of 12 buttons (lit up dim red for visibility) giving you a total of THIRTY-SIX hot cues! (Mixxx 1.8.0-1.9.0 internally supports just 32, so the center 4 buttons and the lower right one in the third bank (black) are inoperative. Mixxx 1.9.1+ supports 36 again.) The TRIG button will be red in bank 1, purple in bank 2, and black in bank 3.

The red LEDs flash when you press the corresponding button. The outer blue LEDs light when a cue point is set on that button. (Changeable with the **markHotCues** option mentioned at the top of this page.)

- To set a cue, just press a free button at the desired time.

- To recall a cue, just press a button that has a cue point set

- To erase a cue, hold TRIG while pressing the button(s) you want to erase

Vinyl Modes

Vinyl mode (red)

- Outer circle (C1) and Center slider (S4) allow you to bend the song's pitch, akin to dragging your finger on the record

Vinyl2 Mode (purple)

- Outer circle (C1) allows you to "scratch" the song and perform juggles

- Center slider (S4) allows you to "scratch" the song

- Scratch & cue toggle: Hold the VINYL button and press CUE when in Vinyl2 mode to toggle recalling the cue point when you touch either C1 or S4. This makes juggling really easy since you don't have to back-cue.

Track Select Mode (black)

- Outer circle (C1) allows you to scroll through your Library

- Center button (anywhere on S4) loads the currently highlighted song into the current deck, as long as it's not live (playing to the main output.)

- B11 selects backward between Library, Playlist, Browse, etc. views

- B12 selects forward between Library, Playlist, Browse, etc. views

- B13 moves the highlight up one item

- B14 moves the highlight down one item

Deck Mode

You are in this mode only **while holding down the Deck button**, unless the controller is in single-deck mode:

- Gain slider (S1) adjusts main volume

- Pitch slider (S2) adjusts main balance (pan)

- B11 resets main volume knob to the middle

- B12 resets main balance to center

- Left slider (S3) adjusts the cue/main headphone mix

- Center slider (S4) adjusts the cross-fader
Fig. 93: Stanton SCS.3d (circle mode)
Fig. 94: Stanton SCS.3d (slider mode)

- Right slider (S5) adjusts the headphone volume

- TAP resets cross-fader to center position (only in multi-deck mode)

- Press Deck + Sync together to toggle between multi- and single-deck modes

- In single-deck mode:

- Hold the Deck button down and touch any slider to reset it to its default value

- Press Deck + Play together to change the active deck

General controls
Fig. 95: Stanton SCS.3d (slider mode)

Unless otherwise noted, the following controls have the same function in all modes.

- S1 controls volume of currently active deck.

- S2 changes rate or pitch depending on current mode, see VINYL-mode for discussion.

- PLAY starts or pauses the track. When a track is ready to play the button blinks.

- CUE will jump to the cue point or set it, depending on your settings and whether the track is playing.

- SYNC syncs the active deck to another deck. Holding SYNC for more than one second will enable SYNC lock.

- Pressing TAP repeatedly will adjust track BPM.

The currently active deck/channel is shown by lighting one of B11 through B14 red (except for FX-mode where the selected FX chain is shown). B11 lights red for deck 1, B12 for deck 2, B13 for deck 3 and B14 for deck 4. See DECK and FX modes on how to control this.

A light spinning around the circle shows the track is playing. When the track nears its end (at -30 seconds), a blinking light will detach and run slower. When the spinning light reaches the blinking light, the track ends.

By touching one of the six mode buttons, you switch to that mode. Some modes have alternate overlays, you can switch to those by touching the mode again. The first overlay is red, the second blue, the third is purple. The following mode-overlays are available:
Fig. 96: Stanton SCS.3d (mode buttons)

- FX: (red) Control effect device; (blue) Control deck superknob

- EQ: (red) Control deck EQ

- LOOP: (red) Set/release beat-loops; (blue) Rolling-loops

- TRIG: (red) cue points 1 through 5; (blue) cue points 6 through 10; (pink) cue points 11 through 15;

- VINYL: (red) jog wheel; (blue) scratch

- DECK: (red) library scan & load

Modes are remembered per-deck. When you switch the deck, the mode last active for that deck will be selected.

By holding a mode button, a mode is enabled temporarily in hold-mode. When the button is released again, the device switches back to the previously selected mode. Some hold-modes enable alternative, often disruptive functionality. Most

of the time you won't want to use the hold-modes on live decks (e.g. needledrop in VINYL) or you must be very cautious (assigning effect chains with FX).

Each mode will be explained in detail below.

FX mode
Fig. 97: Stanton SCS.3d (slider mode)

FX mode allows you to control effects. Slider S2 controls the wet/dry mix of the current effect. Sliders S3, S4, and S5 control the first three effect knobs on the effect unit. (Specifically, the first effect of one of the four effect chains is controlled.)

The device remembers the selected effect per deck, so if you switch decks you also switch to the previously selected effect on that deck. Initially, effect slot 1 is selected for deck 1, slot 2 for deck 2 and so on.

To control another effect, buttons B11 through B14 allow you to switch. The currently active effect is shown in red where button B11 lights red when the first effect chain is selected, B12 for the second chain, B13 for chain 3, and B14 for chain 4. The buttons turn blue when the active deck is assigned to this effect chain. If the active effect is assigned to the current deck, the corresponding button will appear purple. If you don't see purple it means that the effect you're controlling is not assigned to the current deck.

For example, if the controller is on deck 2, has effect slot 2 selected, and effects 2 and 3 assigned, the four buttons would be lit as follows:

- B11: black
- B12: purple
- B13: blue
- B14: black

Holding FX

By holding FX, you can toggle assignment of the current deck to effect chains with buttons B11 through B14. B11 assigns effect chain 1, B12 assigns effect chain 2, B13 assigns chain 3, and B14 assigns chain 4 to the active deck. The effects that have the current deck assigned are shown in blue. While FX is held, S2 can be used to scroll through different effects. To load the next effect, touch top half of the slider and touch the bottom half to load the previous effect into the currently active effect slot.

When FX is held, the button for the active deck is shown in red. So if you want to assign the active effect to the active deck, press the button that is red. If the button is purple, pressing it would deactivate the active effect on the active deck.

Example on how to load an echo effect into chain 3 and assign it to channel 2:

1. Press DECK-B12 to switch to deck 2
2. Press FX to switch to FX mode
3. Press B13 to select effect chain 3
4. Slide S2 to the bottom to bypass chain 3 (precautionary measure)
5. Hold FX and touch S2 above the middle to select the next effect (will select echo if no effect was selected previously)
6. Hold FX and press B13 to assign effect chain 3 to deck 2
7. Adjust echo parameters with sliders S3, S4, S5
8. Slide S2 upwards to bring the effect in

EQ mode

In EQ mode, the central sliders S3, S4, S5 control low/mid/high EQs. Hold EQ to control pre-gain on S1 instead of volume. The other controls (low/mid/high/pitch) are reset to center when the control is touched while EQ is held.

LOOP mode
Fig. 98: Stanton SCS.3d (circle mode)

By touching the circle you activate a loop over a certain number of beats. Touching on the right side will activate a beat-loop over 1, 2, 4, 8 etc beats, starting from the top. On the left side you get fractions 1/2, 1/4, 1/8 etc loops starting from the top. To leave the loop, touch center.

By touching the LOOP mode button again, the 'rolling' overlay comes on and the LOOP button turns blue. In rolling mode, the loop will be released as soon as you take your finger off the circle and the track will resume where it would have been without looping.

TRIG mode

You can set hotcues and jump to hotcues in this mode. The circle is split into five fields (1: top left, 2: bottom left, 3: top right, 4: bottom right, 5: center) where touching the area will either set the hotcue if it was unset, or trigger the hotcue if it was set. When a hotcue is set, the blue lights next to it will light.

To clear a hotcue, hold TRIG and touch the corresponding field.

The first TRIG overlay (red light) controls hotcues 1 to 5, touching TRIG will switch to overlay two, controlling hotcues 6 to 10 (blue light), then overlay three, for cue points 11 to 15 (purple light).

VINYL mode

The circle C1 functions as a jog-wheel, slide clockwise to speed-up the track. The center slider S4 can be used to raise and lower speed by holding it above or below center, respectively.

B11 jumps back one beat, B12 jumps forward. B13 and B14 control fast-reverse, fast-forward.

While VINYL is held, B11 through B14 set the pitch slider mode. The currently active mode lights blue. The different pitch slider modes are:

- B11 Absolute rate: The pitch slider directly sets the rate in a wide range
- B12 Discrete Pitch: Change pitch up or down by touching upper or lower part of slider
- B13 Rate: Change the rate up or down by holding the slider off-center. The further from the center you hold the slider, the faster the rate changes.
- B14 Relative pitch: slide to change pitch up or down

When VINYL is held, the SYNC button adjusts the beatgrid. When the track is not playing, the beatgrid is moved to the current track position. When the track is playing, the beatgrid is aligned with the other track's beatgrid.

A second overlay to VINYL (blue) enables scratching on the pad. Both the circle and the center slider (S4) can be used to scratch.

DECK mode

This mode is used to load tracks. When the current deck is not playing, an arrow pattern indicates that the currently selected track can be loaded into the deck by pressing the central field S4. Sliding on the circle C1 will scroll through the library.

B11 and B13 allow you to switch up and down between the library categories, while B12, B14 allow stepping through the library list one-by-one (the slider allows only coarse control).

When holding DECK, you can switch channels.

- B11: deck 1; B12: deck 2
- B13: deck 3; B14: deck 4

The corresponding button turns red. The active deck is shown on the buttons in all modes except FX.

The controller keeps its mode per deck. So when changing deck, the mode will switch to the mode previously used on that deck.

Note that the active deck is synced with the *Stanton SCS.3m*, so when switching between decks 1 and 3, or 2 and 4 the other device changes as well.

Fig. 99: Stanton SCS.3d (circle mode)

17.1.119 Stanton SCS.3m "DaMix"

- Manufacturer's product page

New in version 1.7.

Mapping Description
Fig. 100: Stanton SCS.3m "DaMix" (top view). *Images courtesy of Stanton Magnetics, Inc.*

The left side of the controller controls deck 1. The right side is for deck 2. This I'll walk through the controller from top to bottom and explain the features.

Deck select buttons

These are used only as modifier buttons in Mixxx for now. Hold them down to access different functions for that side of the controller (Deck A/C for the left side virtual deck 1, Deck B/D for the right side, deck 2,) detailed for each control below.

Top horizontal sliders

These adjust the pitch control.

- Touching near the edges will do a temporary pitch bend in that direction.
- Hold the current mode button down (EQ/FX) and touch the slider on that side to reset it to 0%.
- Hold the applicable Deck select button down when using these sliders to perform fine-grained pitch adjustment.

When the Master button is held down:

- The left slider adjusts the Pre/Main headphone mix
- The right slider adjusts main balance
- Also hold the current mode button and touch the slider on that side to reset it to center

FX/EQ sliders

From left to right, for each side:

- in EQ mode these adjust Low, Mid, and High frequency filters
- in FX mode these adjust Depth, Delay, and LFO for the flanging effect

Hold down the current mode button (FX/EQ) and touch one of these sliders to reset it to center.

FX/EQ mode buttons

Press these to choose what the sliders above them control. (See above.)

- Hold Deck and press FX to toggle the flange effect for that deck
- Hold Deck and press EQ to auto-adjust the pitch to sync the BPM on this deck with the other one (assuming it was detected correctly on both)

Volume sliders

These adjust the channel volume as on a traditional mixer.

- Holding Deck causes these to adjust the pre-fader gain for the deck

When the Master button is held down:

- The left slider adjusts the headphone volume
- The right slider adjusts main volume

Soft buttons

From top to bottom on both sides:

- Rewind

- Fast forward

- Cue

- Play

Headphone buttons toggle that deck in the headphone mix.

Cross-fader

Adjusts the cross-fade between the virtual decks

- Needle drop function: Hold a Deck button to use the cross-fader strip to search through the track loaded on that deck

Level Meters

These normally show the pre-fader signal for the respective deck. When holding down the Master button, they show the stereo main output meters: left side for the left channel, right side for the right channel.

NOTE: The LEDs are calibrated to the VU meters on-screen. If you see a red LED flicker, *you are clipping* and need to reduce the volume or gain to avoid distorted sound and/or speaker damage.

Deck switching buttons

When touching the "A C" or "B D" buttons, the mixer switches between decks. On the left side, touching "A C" will switch between decks 1 and 3. On the right side, touching "B D" will switch between decks 2 and 4. All controls except for the crossfader then control the selected deck.

Connected SCS.3d modules will follow deck changes. For example if you switch from deck 1 to deck 3 on a SCS.3m, all connected SCS.3d modules who are on deck 1 will also switch to deck 3.

EQ mode

This is the standard mixing mode where the three EQ sliders control low/mid/high. The top slider controls the filter knob.

Touching EQ will return to EQ mode from the FX modes. Holding EQ and touching a slider will reset it to its preset position. (Unfortunately this doesn't work for FX and MASTER modes.)

FX modes

Touch one of the four buttons to the side of the gain slider to control one of the effect chains. Top button selects first effect chain and so forth. In this mode, the vertical sliders control the first three knobs of the first effect in the selected effect chain. The top slider controls dry/wet mix.

You can assign FX chains to the deck by holding FX and pressing one of the four buttons next to the gain slider. So to assign FX chain 1 to the current deck, hold FX and press the top button (right below EQ).

When holding FX, the volume slider can be used to adjust channel gain. Hold FX and slide up to make the channel louder. Hold FX-EQ and touch the gain slider to reset gain.

MASTER mode

When holding the central MASTER button, the left side controls the headphone channel, while the right side controls the main channel.

- Left top slider: Pre/main mix on headphone

- Right top slider: main balance

- Left slider: head gain

- Right slider: main gain

- Buttons: The buttons assign effects to head and main output

17.1.120 Tascam US-428

This product has been discontinued.

- Manufacturer's product page

New in version 1.6.2.

Note: Unfortunately a detailed description of this controller mapping is still missing. If you own this controller, please consider contributing one.

17.1.121 TrakProDJ

New in version 1.10.0.

Note: Unfortunately a detailed description of this controller mapping is still missing. If you own this controller, please consider contributing one.

17.1.122 Vestax Spin

This controller has been discontinued as Vestax went out of business in 2014.

- Forum thread

New in version 1.9.

Note: Unfortunately a detailed description of this controller mapping is still missing. If you own this controller, please consider contributing one.

17.1.123 Vestax Typhoon

This controller has been discontinued as Vestax went out of business in 2014.

- Manfacturer's product page
- Forum thread

New in version 1.9.

Note: Unfortunately a detailed description of this controller mapping is still missing. If you own this controller, please consider contributing one.

17.1.124 Vestax VCI-1000 (MixVibes 3DEX Edition)

This controller has been discontinued as Vestax went out of business in 2014.

Note: Unfortunately a detailed description of this controller mapping is still missing. If you own this controller, please consider contributing one.

17.1.125 Vestax VCI-100 MKI

This controller has been discontinued as Vestax went out of business in 2014.

New in version 1.6.

Note: Only Firmware version 1.2 is supported by Mixxx.

Note: Unfortunately a detailed description of this controller mapping is still missing. If you own this controller, please consider contributing one.

17.1.126 Vestax VCI-100 MKII

This controller has been discontinued as Vestax went out of business in 2014.

- Product page in archive.org
- ASIO driver for Windows in serato.com

New in version 2.0.

Mapping Description

[Functions] in brackets are executed if a shift button of the deck is pressed. **{Functions} in braces are executed if a shift button of the other deck is pressed.** Changes after the previous version are in bold.

1. **Unfocus EffectSlot of the EffectUnit** [Select EffectUnit1/2]

2. **Focus next EffectSlot of the EffectUnit** [Select EffectUnit3/4]

3. **Meta knob of the EffectSlot1, or if EffectSlotN is focused Parameter1 of it [Set the link to meta knob][1]**

4. **Meta knob of the EffectSlot2, or if EffectSlotN is focused Parameter2 of it [Set the link to meta knob]**

5. **Meta knob of the EffectSlot3, or if EffectSlotN is focused Parameter3 of it [Set the link to meta knob]**

6. **Super knob, or if EffectSlotN is focused Parameter4 of it [Set the link to meta knob], or if enabled by #33 Wet/dry mix of the EffectUnit**

7. EQ high

8. EQ mid

9. EQ low

10. **Pitch (up and down to 3 semitones continuously, or in keylock mode discretely)**

11. Filter **(super knob of Quick Effect)**

12. **Gain**

13. Rate [Rate by quantized BPM]

14. Channel fader

15. Cross fader

16. Headphone volume

17. Headphone mix

18. Master volume

19. Scratch **[Brake (if released before full stop, playback resumes)]**

20. Jog (locked in slip mode)

21. Play **[Reverse]**

22. Cue **[Cue and Play]**

23. **Activate [Clear] hotcue1**

24. **Activate [Clear] hotcue2**

25. **Sync mode [Adjust beatgrid to the current playposition]**

26. Keylock mode **[Quantize mode]**

27. Loop by default loop size[2] [Reloop], or in loop *Exit the loop [Set loop out position]*

28. Halve default loop size **[Jump backward]**, or in loop *Halve the loop***[Jump it backward] {Halve jump size[3] of the other deck}**

29. Double default loop size **[Jump forward]**, or in loop *Double the loop***[Jump it forward] {Double jump size of the other deck}**

30. **Enable [Set next effect to] EffectSlot1 of the EffectUnit**

31. **Enable [Set next effect to] EffectSlot2 of the EffectUnit**

32. **Enable [Set next effect to] EffectSlot3 of the EffectUnit**

33. **Enable #6 to control wet/dry mix of [Set next effect chain to] the EffectUnit**

34. Slip mode (affect scratch, brake, pause, reverse, loop and hotcue)

35. PFL [PFL solo] (if headphone mix is cue or main only then switch it)

36. Enable EffectUnit1 [EffectUnit3] for the channel

37. Enable EffectUnit2 [EffectUnit4] for the channel

38. Up: previous **item** and scroll, Down: next **item** and scroll, Left: **previous pane [load to left]**, Right: **next pane [load to right]**, Push: **choose item**

39. Channel select

Mapping for Mixxx 2.0

[Functions] in brackets are executed if a shift button of the deck is pressed.

1. Set previous effect chain to the EffectUnit [Select EffectUnit1/2]

2. Set next effect chain to the EffectUnit [Select EffectUnit3/4]

3. Parameter1 of Effect1 of the EffectUnit

4. Parameter2 of Effect1 of the EffectUnit

5. Parameter3 of Effect1 of the EffectUnit

6. Wet/dry mix of the EffectUnit

7. EQ high

8. EQ mid

    4. see the article or use *Controller Wizard* (choose "Quick Effect Super Knob") for low-high pass

    5. size < 1/4: LED28 & 29; 1/4 ≤ size < 4: LED28; 4 < size ≤ 64: LED29; 64 < size: LED28 & 29

17.1.127 Vestax VCI-300

The VCI-300 is a dedicated USB MIDI controller. It also comes with a built in audio interface with standard 4-in/4-out and headphone connection, which means all you need for DJing is the VCI-300, a laptop and a set of headphones.

This controller has been discontinued as Vestax went out of business in 2014.

  • Forum thread

New in version 1.11.

Differences between VCI-300 and VCI-300 MKII

In 2010 Vestax made changes to the original VCI-300 that improved the controller. There were *no* changes in the MIDI mapping.

Volume Boost (Gain Boost)

- Higher output gain level and headphone volume level when supplying power with the optional power adaptor.

- *Important Note:* Optional power supply DC-7 must be used in order to get the boost on the headphones and main output. Without the power supply the MKII will perform just like the original VCI-300. Also, using the DC-7 on the original VCI-300 will do nothing.

Optional Vestax Digital Fader (not included)

The VCI-300MKII Cross fader can be upgraded to Vestax's new magnetic sensor system digital fader CF-X2.

New Direct Audio Thru

Audio fed to the MIC/AUX input can now be directly sent to the main outputs with the THRU switch turned ON, minimizing latency of when fed through ITCH.

New adjust knobs for the JOG sensor control

New JOG sensor adjust knobs for speedy and accurate adjustments.the VCI-300MKII's JOG wheels have excellent tracking ability,and flexibility for various play styles.You can control songs with analog precision.

New Mini Head-Phone Jack

The MKII features a 1/8 inch headphone connection along with standard 1/4 inch connection.

Mapping description

Mixxx supports the VCI-300 out of the box. The mapping for Mixxx closely resemble the original to make the transition easy.

#	KEY	FUNCTION
01	Pitch Slider	Adjusts playback speed.
02	Auto Tempo	Toggle quantize (1.11.0: Trigger beatsync)
	Shift + Auto Tempo	Trigger beatsync (1.11.0: Toggle quantize)
	Scroll + Auto Tempo	Tap BPM. When taped repeatedly, adjust the tracks BPM to the tapped BPM.
03	Keylock	Trigger beatsync
	Shift + Keylock	Reset pitch to 0.00% (quartz)
04	Pitch Shift	Pitch bend
	Shift + Pitch Shift	Fine tune playback speed +/-0.01
05	Cue [1-3]/In	Set/Activate Hotcue
	Shift + Cue [1-3]/In	Delete Hotcue

06	Scratch	Toggle scratching on jogwheel
07	Out 1/Loop	Set manual loop in point
	Shift + Out 1/Loop	Clear loop point
	Out 2/Loop	Set manual loop out point
	Shift + Out 2/Loop	Clear loop point
	Out 3/Loop	Enable/disable loop
08	Shift	Holding shift engages shift functions of many of the buttons, secondary functions are printed inside a gr
09	Trim	This controls the volume of the track before it goes to the EQ and fader.
10	Censor	Temporary play backwards while pressed, resumes from where the playhead would have been if the but
	Shift + Censor	1.11: Toggle reverse playback. Pressing Censor again during reverse playback, will return to normal pla
		1.12 (work in progress): Enable/disable effect unit with preselected *Filter* effect. The filter parameter is
11	Auto Loop	Enable beatloop of the current beatloop value (default: 4 beats) for tracks that have BPM calculated
	Shift + Auto Loop	Enter/Exit beatloop roll
	Scroll + Auto Loop	Reset number of beats to 4 if beatloop not active
12	Equalizers	Adjust the gain of the high/mid/low EQ filter.
13	Half	Halve loop length
	Shift + Half	Jump to start of track (while paused)
	Scroll + Half	Seek backward (while paused)
	Double	Double loop length
	Shift + Double	Jump to end of track (while paused)
	Scroll + Double	Seek forward (while paused)
14	Master Level	This knob controls the overall output of the VCI-300, ensure this is right down before running the softw
15	Monitor Select	Controls the balance in the headphones between the mix output and the PFL headphone cue
16	Monitor Volume	Controls the volume of the headphones.
17	Cue	If a cue point is set, jumps to the cue point when pressed.
	Shift + Cue	Set the cue point (while playing), clear the cue point (while paused), jump to beginning of track (if no c
18	Play	Start/Pause playback
	Shift + Play	Stutter Play
19	Crossfader	Fades between the left and right channels.
20	Input faders	Control the volume of their respective tracks.
21/23	PFL A/B	Sends the left/right deck to the headphone mix.
	Shift + PFL A/B	Load selected track into the deck (while paused) and switch PFL to this deck
22	Scroll + Jogwheel	Scroll playlist (while paused)
24	Cursor Up/Down	Scrolls to the next/previous track in the track table.
	Cursor Left/Right	Switches to the next view (Library, Queue, etc.)
	Tab	Toggles (expands/collapses) the currently selected sidebar item.
25	Jog (platter touched)	Track search (while paused when scratching is disabled)
		Pitch bend / nudge (while playing when scratching is disabled)
		Scratch (when scratching is enabled)
	Jog (outer rim)	Pitch bend / nudge
	Shift + Jog	Fast track search (while paused)
	Scroll + Jog	Scroll playlist (while paused)
Fig. 101: Vestax VCI-300 (schematic view) Image (c) Vestax

17.1.128 Vestax VCI-400

The Vestax VCI-400 is a 4 deck controller. It has an integrated audio interface with balanced outputs (XLR and 1/4"
TRS), two pairs of RCA inputs, and two XLR / 1/4" combination microphone inputs. The microphone inputs can be sent
to the computer for recording and broadcasting. The RCA inputs do not have phono preamps and do not work for vinyl
control. The VCI-400 requires its own power supply; it does not run on USB bus power.

This controller has been discontinued as Vestax went out of business in 2014.

New in version 1.10.1.

Compatibility

The original VCI-400 firmware has a bug that prevents the sound card from working with Linux. Now that Vestax is out
of business, drivers and firmware for Vestax devices are hosted on Serato's website. If your VCI-400's sound card does
not appear as an available device using Linux, use the firmware updater on a computer running Windows or Mac OS X.
This will only need to be done once and then the controller will continue to work with Linux.

Note that the VCI-400 and VCI-400 Ean Golden Edition are incompatible. Their firmwares use different MIDI messages
to communicate with the computer. Unfortunately, it is not possible to switch between the VCI-400 and VCI-400 Ean
Golden Edition firmware.

Mapping

The VCI-400 mapping for Mixxx is based on the Serato Limited Edition overlay.

For regular use, make sure the "mixer select" switches are all the way to the left. If you move them to the right, the
Play / Cue buttons will be used to select vinyl control modes instead.

Most of the functions are exactly as they appear on the overlay, and the overlay is very nicely labeled so that's the best
place to start.

The four small buttons below the grouping of 8 buttons selects which mode the 8 buttons are in, either Hot Cues, Loops,
Rolls, or Samples. Mixxx remembers which mode is selected on a per-deck basis, so when you toggle the deck-selection
switches the mode may change. The button corresponding to the current mode will be lit so you know what mode you're
in.

Button Modes:

- In Hot Cue mode, the 8 buttons will move Mixxx to the designated hotcue. If you hold the shift button, the hotcue
  will be cleared.

- In Loop mode, the 8 buttons will create a new loop at the current position from size 32nd note to 16 beats.

- In Roll mode, holding any of the buttons will temporarily create a loop anywhere from 32nd note to 16 beats.

- In Sampler mode, both sides of the controller launch the same set of 8 samplers. Holding shift will eject a sample.

Some of the buttons have special functions in Mixxx:

1. The Vinyl / Slip button. While pushed, the jog wheel is in scratching mode (similar to if you push down on the
   platter). If you hold this button while spinning the jog wheel, you can let go of the wheel and Mixxx will still be in
   scratch mode. Great for backspins.

2. The Param knob can be used to adjust the musical key of the current track. Twist to make the tone higher or lower.
   If you hold the shift button (3), use this knob to scroll quickly through the track. Pushing this knob will reset the
   key.

3. Shift button

Fig. 102: Vestax VCI-400 (top view with annotations)

4. Auto Loop knob. Twisting this will change the size of the current loop, either doubling or halving the size. If you hold shift (3), twisting this knob will move the loop left or right by 1 beat per click. Pushing this knob will enable or disable looping.

5. The Master FX button enables the 1st FX bank to be applied to the main output.

6. The FX Mode button toggles which effect is in the first FX bank.

7. Controls FX1 Parameter 1

8. Controls FX1 Parameter 2

9. Controls FX1 Parameter 3

10. Controls FX1 Dry / Wet

11. Enable/Disable Quantize Mode.

12. Enable/Disable Keylock

The four small buttons in the center, Area, Panel, Back, and Prepare, don't do anything. Neither does the sampler volume slider.

Some additional functions are accessible with the shift button:

- Shift + Load to eject a track.
- Shift + Play while the deck is playing does a breaking stop.
- Shift + Censor does a spinback stop.

Vinyl Control Mode

If you want to use vinyl control instead of the jog wheels, you can move the mixer selection switches all the way to the right. In this mode, the Play button becomes a Vinyl Control Enable/Disable button, and the Cue button selects which Vinyl Control mode is active – Absolute, Relative, or Constant. The cue button lights up when Absolute is selected.

Note about VU Meters

There's a bug in the way that the VCI400 firmware works – although Mixxx can control the VU meters, the VCI's internal soundcard always *also* controls the VU Meters. This can result in an odd flickering effect that looks strange. For this reason, the main VU meters are disabled by default. If you've installed the firmware that allows decks C and D to act as pass-through mixer channels, you may see flickering there too.

17.1.129 Yaeltex MiniMixxx

- Manufacturer's product page

New in version 2.4.0.

The Yaeltex MiniMixxx is a compact, 2-deck DJ controller designed exclusively for Mixxx. Unlike most small form-factor DJ controllers which sacrifice important functions, the MiniMixxx provides access to all of the critical parts of DJing: full size EQ and quick FX knobs, pitch sliders, channel faders and track gain, playback controls including sync nudging, looping, an FX bank, 4 hotcues per deck, 8 samplers, sync lock, keylock, library navigation, and master output settings. Button mode layers are intelligently laid out and road-tested for maximum flexibility during performance, with bold RGB colors indicating current modes. The visualization of channel volume and virtual record spinning indicators makes the MiniMixxx an eye-catching wonder in the DJ booth.

The MiniMixxx can run on USB bus power. Using a separate power supply increases the brightness of the LEDs. The MiniMixxx does not have a built-in sound card.

Compatibility

Controller

The MiniMixxx is a USB class compliant MIDI device. To work correctly with this mapping, you need to load the custom Yaeltex layout file onto your controller:

1. Download the `MiniMixxx Layout Configuration`. 1. Go to Yaeltex Kilowhat configuration site. 1. Select your controller and click "Load From Desktop" 1. Select the downloaded layout file. 1. Click Send to Device.

Inside Mixxx, open the preferences and select the Yaeltex Minimixxx from the list of controller presets.

Mapping description

Fig. 103: Yaeltex Minimixxx

Mixer

The primary mixer knobs and sliders are single-purpose. This includes:

No.	Control	Function
1	Hi	High frequency EQ Adjustment
2	Mid	Midrange EQ Adjustment
3	Low	Low frequency EQ Adjustment
4	FX	Turn to engage Quick FX for each channel.
5	Level	Slide to adjust channel level
6	Pitch	Slide to adjust deck speed. When SHIFT is held, has no effect. When KEYLOCK is held, adjusts musical pitch.

Buttons Overview

Almost all the other controls on the MiniMixxx have more than one function. It helps to understand how the buttons are divided

Deck 1			Deck 2			Layer Buttons	
1	2	3	4	5	6	7	8
9	10	11	12	13	14	15	16

There are 16 buttons arranged in three blocks. The buttons are numbered 1-16, starting in the upper left across the top row, and then counting the bottom row. So the upper left button is 1, the upper right button is 8, the lower left button is 9, the lower right button is 16.

- Deck 1 uses the leftmost 6 buttons in a 3x2 grid.

- Deck 2 uses the next block of 6 buttons.

- The last 4 buttons enable certain layers and modes. These are buttons 7, 8, 15, and 16.

- Button 16 in the lower right is always the SHIFT button.

- The upper left button of each track block (number 1 and 4) are always CUE buttons for track 1 and 2, respectively.

- The lower left button of each track block (number 9 and 12) are always PLAY buttons for track 1 and 2.

- Each deck has a small grid of 4 buttons to the right of the PLAY and CUE buttons for that deck. These are buttons 2, 3, 10, 11; and 5, 6, 13, 14.

Constant buttons:

Deck 1			Deck 2			Layer Buttons	
CUE			CUE				
PLAY			PLAY				SHIFT

Default Layer

Because the MiniMixxx is so compact, most controls have more than one function depending on what Layer is selected. The Default Layer will be active when the controller starts up.

Encoder 1	Encoder 2	Encoder 3	Encoder 4
JOG 1	PREGAIN 1	PREGAIN 2	JOG 2

Deck 1			Deck 2			Layer Buttons	
CUE	KEY-LOCK	FX	CUE	KEY-LOCK	FX	HOTCUES-1 / FX	HOTCUES-2 / SAM-PLERS
PLAY	SYNC	LOOP	PLAY	SYNC	LOOP	LI-BRARY / MAIN GAIN	SHIFT

The Default Layer is active when the controller starts, and represents the default actions for each button. Some buttons activate other layers. When a layer is selected, pushing another layer button will enable that layer instead. Or, press the currently-activated layer button to disable it.

In the Default Layer, the encoders above the Pitch sliders will have an animated spinning indicator, and the encoders above the Level sliders will show an animated VU meter for each deck.

But-ton	Cate-gory	Function
2	Deck 1	KEYLOCK. Tapping this button toggles keylock. Press and hold this button and move the PITCH slider to adjust musical key without changing track speed.
3	Deck 1	Toggles FX Unit 1 for each deck.
10	Deck 1	SYNC. Tap to perform a one-off beatsync. Press and hold to enable Sync Lock.
11	Deck 1	Enables the LOOP layer for each individual deck.
8	Deck 2	Enables the HOTCUE layer for each deck.
5	Deck 2	KEYLOCK. Tapping this button toggles keylock. Press and hold this button and move the PITCH slider to adjust musical key without changing track speed.
6	Deck 2	Toggles FX Unit 1 for each deck.
13	Deck 2	SYNC. Tap to perform a one-off beatsync. Press and hold to enable Sync Lock.
7	Deck 1	Enables the HOTCUE layer for Deck 1.
8	Deck 2	Enables the HOTCUE layer for Deck 2.
15	Layer	Enables the LIBRARY layer. Hold SHIFT and press to enable the MAIN GAIN layer.
16	Layer	SHIFT

Encoder	Category	Action	Function
Encoder 1	Deck 1 Jog	Spin	Jog forward and back, or nudge faster or slower if the track is playing.
		SHIFT + Spin	Seek forward a large distance in the track.
		Press	Creates a loop if not in a loop, or reloop toggle if the playhead is in the loop.
		SHIFT + Press	Does a beatloop roll.
Encoder 2	Deck 1 Pregain	Spin	Adjust track pregain.
		Press	Toggle *pfl*.
		SHIFT + Press	Reset track pregain.
Encoder 3	Deck 2 Pregain	Spin	Adjust track pregain.
		Press	Toggle *pfl*.
		SHIFT + Press	Reset track pregain.
Encoder 4	Deck 2 Jog	Spin	Jog forward and back, or nudge faster or slower if the track is playing.
		SHIFT + Spin	Seek forward a large distance in the track.
		Press	Creates a loop if not in a loop, or reloop toggle if the playhead is in the loop.
		SHIFT + Press	Does a beatloop roll.

If the track is clipping, the LED ring will flash bright red.

Loop Layers

Encoder 1	Encoder 2	Encoder 3	Encoder 4
LOOP 1	BEATJUMP 1	LOOP 2	BEATJUMP 2

The LOOP layer can be activated separately per-deck. When active, the two encoders for the activated deck will turn green.

In the table below, the Left encoder for Deck 1 is above its pitch slider, Deck 2's is above its level slider. The Left encoders control loops, and the Right encoders control beatjumping.

Encoder	Action	Function
Left Encoder	Spin	Adjusts loop size.
	SHIFT + Spin	Moves the loop by the Beatjump amount.
	Press	Creates a loop if not in a loop, or reloop toggle if the playhead is in the loop.
	SHIFT + Press	Reloop toggle.
Right Encoder	Spin	Adjust beatjump size.
	SHIFT + Spin	Jump the playhead forward / backward.
	Press	Activate a beatloop roll.
	SHIFT + Press	Reloop and stop.

Hotcue Layers

Deck 1			Deck 2			Layer Buttons	
CUE	HOTCUE 1	HOTCUE 2	CUE	HOTCUE 1	HOTCUE 2	HOTCUES-1 / FX	HOTCUES-2 / SAM-PLERS
PLAY	HOTCUE 3	HOTCUE 4	PLAY	HOTCUE 3	HOTCUE 4	LI-BRARY / MAIN GAIN	SHIFT

The HOTCUE layers are also activated separately per deck. When activated, the four buttons to the right of PLAY and CUE for each deck become hotcue buttons. Pressing the hotcue button activates the hotcue. Hold SHIFT and press to clear the hotcue.

Sampler Layer

Deck 1			Deck 2			Layer Buttons	
CUE	SAM-PLE 1	SAMPLE 2	CUE	SAM-PLE 3	SAMPLE 4	HOTCUES-1 / FX	HOTCUES-2 / SAM-PLERS
PLAY	SAM-PLE 5	SAMPLE 6	PLAY	SAM-PLE 7	SAMPLE 8	LI-BRARY / MAIN GAIN	SHIFT

When activated, all 8 buttons next to both sets of PLAY and CUE buttons become sampler buttons. Press any button to activate that sample. Hold SHIFT and press to eject the sample.

FX Layer

Encoder 1	Encoder 2	Encoder 3	Encoder 4
FX META 1	FX META 2	FX META 3	FX SUPER

When FX layer is activated, the four encoders control Effect Unit 1. The left three encoders adjust the META knobs for the three effects in the unit, and the rightmost encoder controls the SUPER knob for the whole unit. In FX mode, the encoders turn blue.

Pressing an encoder enables or disables the effect. Pressing the rightmost encoder toggles the whole unit.

Library Layer

Encoder 1	Encoder 2	Encoder 3	Encoder 4
VERTICAL FOCUS	SELECT 1	SELECT 2	HORIZONTAL FOCUS

When the Library layer is activated, the four encoders enable browsing of the library. In Library mode, the encoders turn purple.

Encoder	Category	Action	Function
Encoder 1	Library Focus	Spin	Move library focus forward / backward.
		SHIFT + Spin	Seek forward a large distance in the track in Deck 1. This is useful for previewing tracks without leaving the library layer.
		Press	Activates "Go To Item", which opens or closes the tree view in the side panel.
Encoders 2 and 3	Scroll	Spin	Scrolls up and down.
		SHIFT + Spin	Scrolls horizontally.
		Press	Load the selected track in either Deck 1 or 2, depending which knob you're using.
		SHIFT + Press	Ejects the currently loaded track.
Encoder 4	Horizontal Focus	Spin	Scrolls horizontally.
		SHIFT + Spin	Seek forward a large distance in the track in Deck 2. This is useful for previewing tracks without leaving the library layer.
		Press	Activates "Go To Item", which opens or closes the tree view in the side panel.

Main Gain Layer

Encoder 1	Encoder 2	Encoder 3	Encoder 4
MAIN BALANCE	MAIN GAIN	HEAD GAIN	HEAD MIX

The main gain layer is useful for adjusting main and headphone output levels. When active, the encoders turn light green and light yellow.

Encoder	Category	Action	Function
Encoder 1	Main Balance	Spin	Adjusts main balance.
		Press	Resets main balance.
Encoder 2	Main Gain	Spin	Adjusts main gain.
		SHIFT + Spin	Adjusts booth gain.
		Press	Resets main gain.
		SHIFT + Press	Resets booth gain.
Encoder 3	Headphone Gain	Spin	Adjusts headphone gain.
		Press	Resets headphone gain.
Encoder 4	Headphone Mix	Spin	Adjusts headphone mix.
		Press	Resets headphone mix.

GLOSSARY OF TERMS

AAC

Advanced Audio Coding

A patented audio compression algorithm which uses a form of *lossy* data compression. Designed to be the successor to *MP3*, AAC generally achieves better sound quality at similar bit rates. While the .aac extension is sometimes used for AAC-encoded files, they are typically saved with an `.m4a` file extension.

AcoustID

An acoustic fingerprint system built entirely on *open-source* technology. It aims to create a free database of user-submitted audio fingerprints with mapping to the *MusicBrainz metadata* database and provide a web service for audio file identification using this database. For more information, see`<https://acoustid.org/>`_.

AIFF

Audio Interchange File Format

High-quality digital audio file format, similar to .wav files. Contains CD quality audio stored in a non-compressed, *lossless* format. AIFF files generally end with a .aiff or .aif extension.

ALAC

Apple Lossless Audio Codec

A *lossless* audio file format used by iTunes and other Apple products. ALAC files use the same MP4 container format as AAC and use the same file extensions (`m4a`, `mp4`). Mixxx and many other programs are not compatible with ALAC. It is recommended to convert ALAC files to *FLAC* for use in Mixxx.

API

Application Program Interface

An API is a specification and set of rules for how software programs interact with each other. In Mixxx, an example of this is the Sound API that Mixxx uses to communicate with the *operating system* to make use of the *soundcards* connected to the computer.

ASIO

Audio Stream Input/Output

ASIO is a *low-latency audio interface API* on Microsoft Windows.

audio interface

An audio interface is a device that facilitates the input and output of audio signals to and from a computer, typically connected by *USB*. Almost all computers come with a basic audio interface built in, but a higher quality audio interface with at least 4 output channels is recommended for Mixxx.

balance

A balance control on a mixer allows you to adjust the balance between the left and right channel. The balance refers to the relative volume of the corresponding channel in a stereo audio signal.

bar

In musical notation, a bar (or measure) is a segment of time defined by a given number of beats. Typically, a piece consists of several bars of the same length.

beatgrid

A series of markers that point to the location of beats within the track. Beatgrids are used for advanced mixing functions such as track *sync*, precise effects synchronization, looping and accurate *BPM* representation.

beatmatching

A mixing technique used to establish a similar tempo with two or more tracks, making them sound like just one track.

binaries

Files that contain compiled computer code, which was compiled from source code. Source code, which is usually a bunch of text files, is processed with a program called a compiler. The compiler then generates a binary, which is something like an an .exe or a .dll file. By using binaries you are relieved of the task of having to compile the code by yourself.

bitrate

Describe the quality of an audio or video file. For audio data the bitrate is commonly measured in *kbps*. For example, an MP3 audio file that is compressed at 192 Kbps will have a greater dynamic range and may sound slightly more clear than the same audio file compressed at 128 Kbps.

BPM

Beats per minute

BPM is used as a measure of tempo in music. If you tap your foot to music you are following the "beat". If you count how many taps you do in a minute you have calculated the BPM.

bug report

Every software has bugs. When you come across a bug in this software, you should submit a report about it to the developers. They can use this to identify, replicate and fix the issue.

CDJ

CDJ is a term originally used to describe a line of CD players from Pioneer Electronics. Today CDJ generally refers to DJ CD players that work like a record player. They allow analog control of music using CDs, usually using a touch sensitive emulated vinyl control surface.

codec

Short for compressor/decompressor, a codec is any technology for compressing and decompressing audio and video data. Some popular codecs for computer audio include *MP3* and *Ogg Vorbis*.

controller

An external hardware device that generates and transmits signals to a computer, usually via *USB*, to control software with physical controls other than a mouse and keyboard. Controllers have many uses for music such as controlling DJ programs like Mixxx. They typically send *MIDI* signals but some controllers use *HID* signals. Many DJs prefer to control DJ software using physical knobs, faders, and wheels on controllers instead of using a computer keyboard and mouse.

crossfader

The crossfader is a slider that determines how much each deck of audio contributes to the *main output*.

cue

cue point

A reference point in the track usually placed on the position the DJ wants the track to start at by default. This is useful to instantly jump to that point without seeking through the track.

cue sheet

A cue sheet (or CUE file, CUE sheet, etc.) is a formatted plain text file which is used to provide index information for a large audio file. For example, it can be used to tell software extra details about the layout of a CD to burn.

cueing

Headphone cueing, or just cueing, is listening to the next track you would like to mix in your headphones. The audience will not hear what you are cueing in your headphones. Being able to cue is a crucial aspect to DJing.

DAW
Digital Audio Workstation

An electronic device or application software used for recording, editing and producing audio files.

db
decibel

A Decibel is a logarithmic measurement of sound level. Whispering is around 25 dB while unbearable sound such as a jet engine is around 160 db. Rule of thumb: A volume increase of 10 dB is perceived as twice as loud.

deck

A deck is like a virtual vinyl turntable. You can load a *track* into it and play the track, just like you would put a record on turntable and play it.

direct monitoring

A feature of many *soundcards* that allows microphones and other input signals to be heard through the soundcard outputs with no perceivable latency. With direct monitoring, the audio interface mixes the input signal in hardware with the output signal from Mixxx. This bypasses the latency of sending the signal into the computer for Mixxx to process and sending it back out to the soundcard.

DRM

Digital Rights Management (DRM) technologies attempt to control what you can and can't do with the media and hardware you've purchased. Typically, a DRM system either encrypts the data so that it can only be accessed in a way authorized by copyright holders or marks content with a digital watermark or similar method so that the content can not be freely distributed. For information about how you can get involved in activism against DRM, see Defective by Design.

EQ
Equalizer

An equalizer allows the sound in specified frequency bands to be amplified or reduced, in order to adjust the quality and character of the sound.

A simple graphic equalizer consists of multiple controls for boosting or cutting bands or frequencies of sound.

A parametric equalizer controls more parameters of the sound than a graphic equalizer. It can control three aspects of each frequency: level (boost or cut), the center or primary frequency, and the bandwidth or range of each frequency.

fast-forward

To cause something to advance at quicker than normal speed. In terms of audio software that means if you press the fast-forward button the audio will play with increased speed as long as the button is pressed. This is useful to seek through a track.

fast-rewind

The opposite of *fast-forward*. If you press the fast-rewind button the audio will play in reverse with increased speed as long as the button is pressed.

file manager

A computer program that organizes data files into groups and shows you where they are when you need to find them again. Popular file managers for the *operating systems* Mixxx supports are Explorer on Windows, Finder on macOS and Nautilus on GNU/Linux.

FLAC
Free Lossless Audio Compression

A patent-free audio compression similar to *MP3* but *lossless* (i.e. there is no loss in audio quality when used). FLAC files generally end with a .flac extension.

flanger

A flanger is an effect that mixes the input signal with a delayed copy of itself which leads to interferences in the signal and creates a comb-filter effect. By routing the output of the effect back into the input (feedback), the effect is enhanced.

GUI
Graphical User Interface

It's pronounced "gooey" and it refers to a user interface based on graphics (icons, pictures and menus) instead of text. In Mixxx, it uses a mouse, keyboard, or *MIDI* / *HID controllers* as input devices.

head/mix button

The head/mix button is used to control how much you mix the *main output* into your *headphone output*. This can be very useful when *cueing* a track, because you can test out how it sounds when mixed with the main mix in your headphones, before letting the audience hear the track.

headphone button

The headphone button is used to indicate whether or not you are pre-listening to a deck or sampler in your headphones.

headphone output

The headphone output is what you hear in your headphones.

HID
Human Interface Device

A part of the *USB* specification. It specifies a device class (a type of computer hardware) for human interface devices such as keyboards, mice, game controllers, and some DJ *controllers*.

hotcue

Similar to the main *cue* point, a hotcue is a reference point in the track. DJs usually place hotcues at distinctive positions within a track such as drops, breaks or kicks and snares. Mixxx supports up to 36 hotcues.

HSV

HSV stands for hue, saturation, and value, and is also often called HSB (B for brightness). The HSV Color Model represents color in a way more suited to the human perception of color. For example, the relationships "stronger than", "darker than", and "the opposite of" are easily expressed in HSV. In contrast, the representation of the hardware-oriented *RGB* model is close to what most monitors show.

icecast

Icecast is free and *open-source* software that allows digital audio content to be broadcast to and from media player software, enabling the creation of Internet radio stations. Unlike *Shoutcast*, the software provides the ability to stream in free file formats like *Ogg Vorbis* and run your own directory server.

IRC
Internet Relay Chat

IRC is an online chat network. The Mixxx IRC channel was on the FreeNode IRC Network in the `#mixxx` channel. The channel was replaced in 2018 by the *Mixxx Zulip Chat*.

kbps

Short for kilobits per second. Here used to measure the quality of audio data. See *bitrate*

key

Short for "musical key" (i.e. C major).

key lock

With key lock enabled, the tempo of the track will change but the pitch remains consistent. When unlocked, the pitch slider will speed up (or slow down) the track and the pitch will increase (or decrease) along with it.

kill switch

A button to turn on and off individual frequency ranges within a channel, i.e. treble, mid and bass. Useful for effects where the DJ drops a track out for a period or creates room for a transition.

LADSPA
Linux Audio Developer's Simple Plugin

The LADSPA *API* is a standard for handling audio filters and audio signal processing effects.

LAME

LAME is a free software *codec* used to encode/compress audio into the *lossy MP3* file format.

latency

Latency refers to a short period of delay (usually measured in milliseconds) between when an audio signal enters and when it emerges from a system. Being able to lower the latency as much as possible makes a huge difference in responsiveness.

level meter

The level meter is used to show the average levels of audio signals. The level should average around the top of the green region, with the loudest parts of the music (the transients) briefly going into the yellow region. If the level meter is in the red, the signal is clipping and the gain should be turned down.

lossless

Used when describing audio compression algorithms, a lossless algorithm is one which results in no loss in audio quality when used.

lossy

Used when describing audio compression algorithms, a lossy algorithm is one which results in a loss in audio quality when used.

macOS

macOS (originally named "Mac OS X" until 2012 and then "OS X" until 2016) is the current Mac operating system that officially succeeded the classic Mac OS in 2001.

main output

master output

The main output is sent to the big speakers. It's what your audience hears. Please note that the term "master output" has been used historically but is in the process of being phased out. Prefer using "main output".

metadata

In general, any piece of information about a music file that Mixxx uses (e.g. title, artist, album, hotcue locations, loops, etc.). Various file metadata formats allow information such as the title, artist, album, and track number to be stored in the audio file itself, see https://en.wikipedia.org/wiki/ID3 . Mixxx stores additional metadata about music files in its database, like *beatgrid*, waveform data, *hotcues*, playlists, crates, number of plays, etc.

MIDI

Musical Instrument Digital Interface

A digital communications language and hardware specification enabling compatible electronic instruments, sequencers, computers, etc., to communicate with each other in a network. Most DJ *controllers* use MIDI to communicate with computers.

MP3

A patented audio compression algorithm which uses a form of *lossy* data compression. It is de-facto standard of digital audio compression for music. MP3 files generally end with a `.mp3` extension.

MusicBrainz

A open-source music encyclopedia that collects music *metadata* and makes it available to the public. For more information, see https://musicbrainz.org/.

Ogg Vorbis

A patent-free audio compression algorithm which uses a form of lossy data compression. It is designed to provide for efficient streaming and manipulation of high quality digital audio. Ogg Vorbis files generally end with a .ogg or .oga extension.

open-source

Generically, open-source refers to a program for which the source code is available to the public for use and/or modification from its original design free of charge. Open source code is typically created as a collaborative effort in which programmers improve upon the code and share the changes within the community. Open source sprouted in

the technological community as a response to proprietary software owned by corporations. For more information, see Wikipedia.

OpenGL

An *operating system* feature used to draw hardware-accelerated graphics. Mixxx uses OpenGL to draw the waveform displays and spinning vinyl widgets.

operating system

Your operating system (OS) is the computing environment on your computer. For example, Windows, macOS, or GNU/Linux are the three operating systems that Mixxx supports.

Opus

Opus is a totally open, royalty-free, highly versatile *lossy* audio codec. The `.opus` filename extension is recommended.

PFL

`PFL` or "pre-fader listen" is the headphone signal that is not affected by the deck volume faders. This allows for pre-listening tracks in headphones by lowering the volume fader so the deck plays only to headphones but not to the audience. See also: *headphone button*.

phase

The phase of a track is its position relative to another track. If two tracks are *sync'd* to the same tempo and in-phase then they should be playing so that their beats are aligned.

pitch bend

A technique used by DJs that temporarily *bends* the rate of a track up or down, usually while a button is held. This technique is usually used to make micro-adjustments to the synchronization of tracks while beatmatching. Before digital DJing, this was accomplished by dragging one's finger alongside the turntable to slow it down or by twisting the record spindle to speed it up.

podcast

A podcast is a feed of audio or video files made available for free or for purchase over the Internet. Podcast clients such as iTunes allow listeners to subscribe to the feed and automatically download content to their portable audio players as it becomes available.

quantization

Quantization is the process of aligning notes and other events like loops or cuepoints so that they start or finish exactly on beats or fractions of beats.

ramping pitch bend

Basically identical to the regular *pitch bend* with the difference that the pitch changes gradually, instead of all at once. Often uses for temporary pitch changes. It simulates the effect of touching a turntable to temporarily slow down or speed up a record.

rate

The speed at which a track is played back, usually expressed in terms of a percentage of the speed relative to the tracks normal rate. Often while mixing, DJs adjust the rates of tracks so that they can play at the same tempo as other tracks. This allows DJs to *beatmix*, and is an essential part of DJing.

ReplayGain

ReplayGain normalizes audio data in a non-destructive way, so the tracks in your music library don't all play at different volumes. Audio files are scanned by a psychoacoustic algorithm to determine the loudness of the audio data. ReplayGain information is stored as *metadata* in a digital audio file in order for the sound to be correctly played at the right level of loudness.

reverse

Reverse plays a track backwards.

RGB

The RGB color model is an additive color model in which red, green, and blue light are added together in various

ways to reproduce a broad array of colors. The name of the model comes from the initials of the three additive primary colors, red, green, and blue.

shortcut

    Shortcuts let you work more efficiently. This manual shows some shortcuts for accessing Mixxx functions with an English keyboard layout. Depending on your language settings the defaults may be different.

shoutcast

    Shoutcast is proprietary software that allows digital audio content to be broadcast to and from media player software, enabling the creation of Internet radio stations.

soundcard

    Another name for an *audio interface*, although few audio interfaces are shaped like cards anymore.

sync

    Sync allows you to automatically adjust a track's *tempo* and *phase* to be in sync with another deck that is playing.

sync lock
master sync

    Sync lock mode persistently adjusts a track's *tempo* and *phase* (if *quantization* is enabled) in order to stay in *sync* with other decks that are in sync lock mode.

tempo

    The speed of a track measured in *BPM*.

timecode

    Used here in conjunction with *vinyl control*. A special audio signal on a control vinyl or control CD (timecode media) that a computer can listen to in order to determine speed, direction and position of the playback.

track

    A track is another word for a song.

URL
Uniform Resource Locator

    The address that defines the route to a file on an Internet server. URLs are typed into a Web browser to access Web pages and files, and URLs are embedded within the pages themselves as hypertext links. One example of a URL is https://mixxx.org .

USB
Universal Serial Bus

    USB is an industry standard for cables, connectors and protocols and used for lots of consumer hardware. If an *audio interface* is "USB class compliant", this means it can be used on all major *operating systems* without special drivers (on Windows, special drivers might still be necessary to use the *ASIO* sound *API* though).

vinyl control

    A method of controlling DJ applications which simulates the traditional DJing paradigm of two turntables. Using special *timecode* media, the DJ application analyzes the timecode signal and simulates the sound and feel of having your music collection on vinyl.

volume

    A term that refers to the degree of sound intensity or audibility; loudness. Volume is determined by people's perception and does not directly correspond to any physical property of sound.

WAV

    Standard digital audio file format used for storing waveform data; allows audio recordings to be saved with different sampling rates and bitrates; often saved in a 44.1 KHz, 16-bit, stereo format, which is the standard format used for CD audio. Wave files are not compressed, and are therefore *lossless*. Wave files generally end with a `.wav` extension.

waveform overview

    The waveform overview shows the waveform envelope of the entire track, and is useful because they allow DJs to

see breakdowns far in advance.

waveform summary

The waveform summary shows the waveform envelope of the track near the current playback position.

Zulip

Zulip is a powerful, open source group chat application that combines the immediacy of real-time chat with the productivity benefits of threaded conversations. The `Mixxx Zulip Chat` at can be found at https://mixxx. zulipchat.com .
